You might be an Android user who admires the sleek design of iPhone emojis and wishes to use them on your device. Fortunately, there are several methods to achieve this without needing to switch to an iPhone. This guide will walk you through multiple ways to get those coveted iPhone emojis on your Android device. How to Get iPhone Emojis on Android iOS Emojis For Android: This is one of the easiest methods. Download the iOS Emojis For Android from the Google Play Store, enable it in your settings, and select the iPhone emoji style within the app. This method doesn't require rooting your device. Pros: Simple, no rooting required, works on most devices. Cons: Some apps might not display the emojis correctly, and third-party keyboards can sometimes raise privacy concerns. If your Android device supports changing the system font, you can use apps like zFont 3 to apply an iOS-style font that includes iPhone emojis. This method works well on certain brands like Samsung, Vivo, and Xiaomi. Pros: No need for third-party keyboards, integrated system-wide. Cons: Limited to certain devices, and some apps may still not support the emojis. For those comfortable with rooting, you can use Magisk Manager to install an iOS emoji module. This method gives you full access to iPhone emojis and other customization options. Pros: Complete control over your device, access to many customization features. Cons: Risk of voiding your warranty, potential security risks, and may require technical know-how. Gboard Emoji Kitchen: While not exactly iPhone emojis, Gboard allows you to create custom emoji combinations. This is a fun and easy alternative if you're not too attached to having the exact iPhone designs. Pros: No need for extra apps, creative combinations. Cons: Not the exact iPhone emojis, limited customization. Do I need to root my Android device to get iPhone emojis? No, rooting is not necessary for most methods. You can use third-party apps or font changers without rooting. Are there any risks in using third-party keyboards? Some third-party keyboards may pose privacy risks. Always download apps from trusted developers and review their permissions carefully. Will the emojis look the same on all apps? Not necessarily. Some apps might display the emojis differently depending on their compatibility. Read this also: What is Android System Intelligence? By following these methods, you can enjoy iPhone emojis on your Android device without much hassle. Whether you prefer the simplicity of a third-party keyboard or the customization options that come with rooting, there's a method that fits your needs. Just remember to choose the option that aligns with your comfort level and device capabilities. While Android and iOS have their own distinct emoji styles, you might prefer the look of iPhone emojis on your Android device. You can get iPhone emojis on Android by downloading an app that installs an iPhone emoji keyboard: iOS Emojis For Android: This app offers a wide range of emoji faces, including new emojis like the heart, skull, laughing, sad, nerd, thumbs up, movie, shrugging, cute, crying, fire, star, high five, smile, love, salute, poop, eyes, discord, hug, thinking, happy, angry, smiley, kiss, and cursed emojis. It also offers customization options, including different emoji symbols, themes, styles, and variations. Green Apple Keyboard: This is a popular keyboard among iPhone emoji lovers. You can download it from the Google Play Store. FancyKey: This keyboard supports downloading and using different emoji sets. You can also download and install the Google Keyboard to be sure you have emoji characters. One way to get iPhone emojis on your Android is by using emoji keyboard apps. These apps replace your default keyboard and offer a wide variety of emojis, including those resembling the iOS style. Some popular emoji keyboard apps include: Kika Keyboard: This app boasts a vast collection of emojis, stickers, and GIFs, including an iOS-style emoji pack. Facemoji: This keyboard offers various themes, including an iPhone emoji theme that mimics the look and feel of iOS emojis. Gboard: While not specifically designed for iPhone emojis, Gboard offers a diverse selection of emojis and allows for customization through themes and sticker packs. Another method is to install an emoji font app. These apps change the font used for emojis on your device, giving them an iOS-like appearance. Some popular emoji font apps include: zFont: This app provides a wide range of fonts, including several that closely resemble the iOS emoji font. Emoji Fonts for Flipfont 10: This app specifically focuses on emoji fonts and includes a variety of iOS-inspired options. Download an emoji keyboard or font app: Choose a reputable app from the Google Play Store. Install the app: Follow the on-screen instructions to install the app. Enable the keyboard (if applicable): If you're using a keyboard app, go to your device's settings and enable it as your default keyboard. Change the font (if applicable): If you're using a font app, follow the app's instructions to change your system font. Enjoy your new emojis! Start using your new iPhone-style emojis in your messages and social media posts. App NameTypeDescriptionKika KeyboardKeyboardOffers iOS-style emoji pack, stickers, and GIFsFacemojiKeyboardFeatures an iPhone emoji themeGboardKeyboardCustomizable with themes and sticker packszFontFontProvides various fonts, including iOS-like optionsEmoji Fonts for Flipfont 10FontFocuses on emoji fonts with several iOS-inspired choicesMethodDescriptionThird-party keyboard appsDownload a keyboard app from the Google Play Store that offers iPhone-style emojis. Popular options include: * Fleksy: Offers a wide range of emoji styles, including iPhone emojis. * Kika Emoji Keyboard: Provides a dedicated iPhone emoji keyboard alongside other fun themes. * SwiftKey: While not specifically offering iPhone emojis, SwiftKey's extensive emoji library includes many similar designs.Emoji font appsThese apps change the system-wide emoji font to resemble iPhone emojis. However, keep in mind that this might affect how emojis appear in certain apps. * Emoji Fonts 10: Offers various emoji fonts, including one that mimics iPhone emojis. * Facemoji Emoji Fonts: Provides different emoji styles, with an option similar to iPhone emojis.Substratum themes (Android 10 and above, rooted devices only)If you're comfortable with advanced customization and have a rooted device running Android 10 or later, you can use Substratum themes to apply a system-wide theme that includes iPhone emojis. Note: This method requires technical knowledge and can potentially affect your device's stability. Proceed with caution.ConsiderationsBefore choosing a method, consider these factors: * App compatibility: Some apps might not display emojis correctly when using third-party keyboard apps or font apps. * Customization: Keyboard apps often offer more customization options, while font apps provide a system-wide change. * Technical expertise: Substratum themes require more technical knowledge and come with potential risks. Emojis have become an essential part of online communication, adding emotion and clarity to our messages. They originated in Japan and have been widely adopted across different platforms. The appearance of emojis can change depending on the device you're using, whether it's an iPhone or an Android device. This variability often leads to a desire to standardize the emoji experience across different platforms, so that communication remains clear and consistent. Created by Apple Known for their detailed and colorful design Can display differently on non-Apple devices Created by various manufacturers Design can vary significantly between devices Some may not support all iOS emojis When you send an emoji from an iPhone, the recipient's device will translate it into its own version. This means that what you send may not look exactly the same on your friend's Android phone. For instance, a smiley face on an iPhone might appear slightly different on an Android. There are methods to get iOS emojis on an Android device, which usually involve installing a new keyboard or app that offers iPhone-style emojis. While no method is perfect, these solutions can help provide a similar emoji experience, helping to bridge the gap between the two operating systems, ensuring messages are conveyed as intended. Before leaping into the emoji switch, knowing the groundwork ensures a smooth transition. This preparation will let your Android phone showcase those coveted iPhone-style emojis without a hitch. First things first, check if your Android phone is compatible with the emoji change. Most modern Android devices running Android 8 (Oreo) or higher support emoji customization. To confirm, navigate to your phone's Settings app and scroll to the section usually titled System, Language & input, or Display. If your device lists options such as Virtual keyboard, Font size and style, or Font style, chances are it's fit for the job. Root access on an Android phone is like having a VIP pass to all its systems. It lets you get up close and personal with the device's software, down to the system font. But here's the kicker: rooting can be risky business. It might void your warranty or cause security issues. Luckily, for just changing emojis, rooting is often unnecessary. Some apps can change emojis without it; however, if you're set on tweaking your emojis on a deeper level, tools like Magisk provide a safer rooting option with a systemless approach that's easier to reverse if needed. To get the coveted iPhone emojis on your Android device, explore these tried-and-true methods. They offer straightforward solutions without the need for complex procedures like rooting your phone. One accessible approach involves utilizing Emoji Fonts for FlipFont. These apps are available on the Google Play Store and let you change the default font to one that includes iPhone style emojis. To use them, simply: Download a FlipFont app like Emoji Font 3. Navigate to Settings > Display > Font Size and Style. Tap on Font Style and select the iOS emoji font from the list. Emoji Switcher apps are another popular choice. These apps, once given root access, allow you to swap out your phone's default emojis with the iOS versions. Here's how to do it: Download an Emoji Switcher app from the Google Play Store. Open the app and grant it root permission. Choose the iOS emoji pack and apply it. Note: This method requires root access, which can be risky and may void your warranty. Alternatively, you can use a variety of keyboard apps that include built-in iPhone emojis. Here's how you can integrate these into your messaging experience: Install an iOS emoji keyboard app such as Gboard, FancyKey, or Kika Emoji Keyboard from the Google Play Store. Go to Settings > System > Languages & Input > Virtual Keyboard > Manage Keyboards. Enable the installed keyboard. When messaging, switch to the new keyboard to use the iPhone emojis. This method provides a seamless messaging experience with the desired emojis right at your fingertips. Getting iPhone emojis on an Android device involves a few simple methods such as installing third-party apps or emoji keyboards, and tweaking default settings without the need for rooting the device. To use iPhone emojis on Samsung devices, users can install a third-party keyboard from the Google Play Store that offers the iOS emoji experience. Once installed, set the new keyboard as the default input method in Settings. Yes, users can get iPhone emojis on Android for platforms like Instagram by installing a compatible emoji keyboard app from the Google Play Store that supports iOS-style emojis. Android users can access iOS emojis without rooting by using emoji replacement apps or by installing an iOS emoji keyboard from the Play Store which seamlessly integrates with their device's system. Without installing any additional apps, obtaining iPhone emojis on an Android device might be challenging. However, some devices allow changing emojis by altering the font settings if the feature is supported. For free iOS emoji usage on Android, users can download third-party keyboard apps that offer a wide range of emoji styles, including those similar to iPhone emojis, from the Google Play Store. To enable an iOS Emoji keyboard on an Android device, download and install a keyboard app that includes iPhone-style emojis. Then, switch to the new keyboard by adjusting the keyboard settings on the device. Ever found yourself green with envy over the cool emojis iPhone users get to flaunt? Well, fear not Android friends, because getting those iPhone emojis on your Android device is totally doable, and I'm here to show you how. You'll be flexing your emoji game in no time! First off, let's talk about what we're going to do here. We're essentially going to be installing a new keyboard on your Android device that includes all those fancy iPhone emojis. Sounds pretty simple, right? Let's dive in. To kick things off, you'll need to download a third-party keyboard app that supports iPhone emojis. There are plenty of options out there, but some popular ones include Kika Keyboard, SwiftKey, and Gboard. After you've chosen your preferred keyboard app, simply head to the Google Play Store, search for the app by name, and hit that download button. Make sure to read the reviews and permissions for each app before installing it to ensure it's a good fit for you. Once the app is installed, you'll need to enable it in your device's settings. Go to Settings, then General Management, and finally, Language and Input. From there, you can select the keyboard you just downloaded and make it your default keyboard. This step is crucial as it allows the keyboard app to replace your default Android keyboard. Without enabling it, you won't be able to use those new emojis. Now that your new keyboard is all set up, you'll likely need to choose the iPhone emoji style within the app's settings. Most keyboard apps will give you several emoji styles to choose from, so make sure you pick the one that says "iOS" or "iPhone." This step might vary slightly depending on the app you've chosen, so if you're having trouble finding where to change the emoji style, don't hesitate to use the app's help feature or search for a guide online. It's time for the fun part - using your new iPhone emojis! Open up your keyboard by tapping on a text field, look for the emoji button (usually it's a smiley face), and start exploring your new emoji options. Congratulations, you now have access to all those cool iPhone emojis right on your Android device! Go ahead and start sending them to your friends and watch their reactions. After completing these steps, you'll be able to use iPhone emojis whenever you're typing on your Android device. It's a simple way to spice up your texts and social media posts, and best of all, it's completely reversible. If you ever decide you want to go back to your old emojis, just disable the keyboard app you downloaded, and everything will go back to the way it was. Make sure to update your keyboard app regularly to get access to the newest iPhone emojis. If your phone is running older versions of Android, some emojis may not display correctly. Keep your device updated to avoid this. Be aware that not all messaging platforms will support the iPhone emoji style. They may appear differently to recipients depending on their device and app. Check if the keyboard app has additional features like emoji predictions or custom themes that can enhance your typing experience. Remember that using third-party keyboards can affect your phone's privacy and security, so only download apps from trusted developers. If your Android device doesn't support third-party keyboards, you may be out of luck when it comes to getting iPhone emojis. However, you can always check for software updates or consider upgrading to a newer device. No, you won't get in trouble. Emojis are universal, and using a different style than what comes with your phone is perfectly fine. The iPhone emojis should look very similar on your Android device, but there may be slight variations due to different screen resolutions and operating system differences. No, rooting is not necessary. The methods described above do not require rooting your device and are safe to perform. Most apps that support emojis will allow you to use the iPhone emojis once you've installed the third-party keyboard. However, some apps may not display them correctly due to compatibility issues. Download a third-party keyboard app from the Google Play Store. Enable the newly downloaded keyboard in your device's settings. Choose the iPhone emoji style within the keyboard app's settings. Start using your new iPhone emojis on your Android device. So, there you have it - a simple, hassle-free way to get those coveted iPhone emojis on your Android device. Whether you're texting, tweeting, or just spicing up your Instagram captions, those little pictures can say so much more than words. By following the steps above, you'll be able to seamlessly incorporate a bit of that iPhone flair into your everyday communication, no Apple device required. Remember, though, while emojis are fun and expressive, they're also a reflection of our digital language and culture. As you enjoy your new emoji collection, take a moment to appreciate the power these tiny images have in connecting us across different platforms and devices. And who knows, maybe one day the emoji barrier between iPhone and Android users will be a thing of the past. Until then, happy texting with your new iPhone emojis on your Android device! After receiving his Bachelor's and Master's degrees in Computer Science he spent several years working in IT management for small businesses. However, he now works full time writing content online and creating websites. His main writing topics include iPhones, Microsoft Office, Google Apps, Android, and Photoshop, but he has also written about many other tech topics as well. Read his full bio here. iOS Emojis For Android is a customization tool that allows you to use iOS emojis on Android. You might not have noticed, but emojis look different depending on which operating system you use. With this tool, you can change your device's keyboard in a matter of seconds.Customize your smartphone keyboard instantlyThe main screen in iOS Emojis For Android has several sections you can use to customize the interface of your Android smartphone. You can easily change the appearance of the keyboard to make it look similar to the iOS one, and you're even able to change the color of the keys to match your aesthetic preferences. Advertisement Remove ads and more with Turbo Install the iPhone emojis on your AndroidInstalling the iOS emojis on Android is one of the best features of this tool. You won't need to do anything else to change your keyboard's entire emoji catalog. You will, however, need to grant the app certain permissions for it to easily make changes to your device.Add Apple wallpapers and tonesiOS Emojis For Android also has other sections where you can find iOS wallpapers. Similarly, increasing your customization options, you can use iPhone ringtones on your Android.Download the iOS Emojis For Android APK for Android and enjoy this great customization app that lets you edit different parameters on your device so that it looks like an iPhone. 4.9K Imagine sending nerd emojis to your friend, only to have them look like rabbit faces on your friend's iPhone. Android phones and iPhones use different emoji designs, sometimes leading to miscommunication. Whether you prefer the iOS emojis or want to see them exactly as iPhone users do, here's how to get iPhone Emojis on your Android phone. One of the easiest ways to solve the emoji translation issue is to use a different keyboard that uses iPhone emojis. However, you can only view the iOS emojis on the keyboard. But once you send them via any messaging app, they will again look like your default Android emojis. Because a keyboard cannot control how emojis look on your entire OS. You can use a keyboard with iOS emojis to enjoy how they actually look on your Android phone. Many third-party keyboard apps support iOS emojis on Android. Among the keyboards we have tried, iOS emojis for Android keyboard and Kika Keyboard works great. Download either of the apps from the Google Play Store. Download iOS Emoji Keyboard Download Kika Keyboard Complete the setup process and set them as your default keyboard. After that, you can start seeing iOS emojis on your keyboard. However, you can see the iOS-style emojis only on the keyboard, but not on the chat app. Whenever you use the image, the Android OS will automatically change it to the one fit for your Android phone. Changing the keyboard only changes the emojis on the keyboard but not the messaging app itself. But you can change the emoji font on your phone to iOS to get iOS emojis on your Android phone. However, note that third-party font-changing apps only work on some Android phones from makers like Samsung, Vivo, LG, Xiaomi, Huawei/Honor, Oppo, and Realme. You can change fonts on other manufacturer phones if your phone is rooted. Remember rooting your phone may result in the loss of the warranty. 1. Get and install the zFont 3 app on your Android phone. Download zFont 3 app 2. Open the app and tap on the See All button beside the Emoji Fonts option. 3. Search for iOS in the search bar and select the emoji pack that resembles iPhone emojis. 4. On the next page, tap on Download and tap on Apply when it completes downloading. 5. On the pop-up, select the font for the text. The font options vary based on your phone model and make. After you select a font option, tap on the Build button. 6. You have built a font with iPhone emojis. The process of applying the font can be different on each Android. However, the app does provide you with a step-by-step process. Just follow the on-screen instructions by tapping on each step. You have successfully changed the font to the one that supports iOS emojis on your Android. Combine this process with changing the keyboard to use iOS emojis on your keyboard and other messaging apps. Changing the font method only works on select Android phones, and Magisk also provides more accurate-looking iPhone emojis than the previous methods. However, this method only works on rooted Android phones. 1. On your rooted Android phone, install the latest version of the Magisk Manager app. Download Magisk Manager 2. Get the latest version of the iOS Emoji Magisk Module. Open this GitHub link, tap on the Asserts option under the latest version, and tap on the Magisk iOS Emoji zip to download it. Download iOS Emoji Magisk Module 3. Open the Magisk Manager app and tap on the Modules tab in the bottom bar. 4. Then tap on the + icon at the bottom. 5. In the file selector that opens, select the downloaded iOS Emoji Magisk Module file to flash it. After that, restart your Android phone and check its iPhone emojis. You can rely on a keyboard app to check the iPhone emojis before sending them. Alternatively, you can search for iOS emojis online and copy-paste them. But to change the emojis on your end, you either have to change the font on your device or install a Magisk module on your rooted Android phone. AndroidchaEmojisHow-toiOS Emojis are supported on iOS, Android, macOS, Windows, Linux and ChromeOS.
