Overall Lightroom CC is a great photo editing and management app. All photos are seamlessly synced between devices (like Apple Photos). And the quiality of the images is exceptional. I think the edited quality is better than Photos, which is why I use it. However there is no way to print! Adobe for whatever reason don't think that users need to print any photos. You can make them as pretty as you want, but you cannot then print them from LIghtroom, you need to export the image and print in something else. I have no idea why a photo app wouldn't be able to print, other than Adobe thinking they know better than their users who have been asking for this since day 1. im new to photography and wanted to get a professional application to help me improve my photos. ive had fun messing around with lighting and what not, but what i really want is to be able to layer or stack my photos, so i can get creative and make some abstract, and strange edits. i figured since this is a popular application that it would have pretty much everything you need to be ceativly expressive through your photos and edits. But now that i needed to look it up how to do it with this app and ask questions it turns out this app doesnt have that, and infact seems to just have basic editing applications such as contrast and color and cropping. So if youre someone who needs an app for just fixing color and contrast, then this is for you. but if you are trying to get creative and blend photos together, then i reccomend using a different app. i have to cancel this subscription because i didnt do enough research when i bought this, im gonna be finding another app that can allow me to do what id like with my photos. I purchased Lightroom about a month ago and I am new to using Lightroom. There is no Red Eye removal tool, this seems like a big omission for a software package oriented towards photography. I am trying to process some older photographs that were digitized and due to using the flash a lot back then, there are a lot of red eyes to remove. I was very surprised that this tools was not available since I have been using other tools for years that have this feature. It appears that Lightroom classic had this feature judging by the number of videos on the web that show how to do it. Too bad Adobe is forcing everyone to a subscription model so there is not a way to purchase the classic version. Other features are very nice. The auto setting for editing photos is good so that saves a lot of time. Also the Healing Tool is very nice for fixing dirt spots and other unwanted artifacts. I am still on the fence on whther I am going to keep this subscription so far I am very undecided on whether it is worth it for me.
