The S7 series is the successor to the Galaxy S6, S6 Edge, S6 Edge+, and S6 Active, which were launched in 2015. The official unveiling of the S7 and S7 Edge took place on February 21, 2016. North American release on March 11, 2016. [8][9] The S7 Active was unveiled on 4 June 2016 and released at the AT&T Show in the United States. June 10, 2016. [2] The Galaxy S7 is an evolution of last year's model, upgraded hardware, design improvements and the restoration of features removed from the Galaxy S6, such as IP certification for water and dust resistance, as well as the ability to expand the memory with a MicroSD card. Following the S6 and S6 Edge+, the S7 comes in a standard model with a 5.1-inch (130mm) display, and an Edge variant with a curved display along the wide edges of the screen, and a larger 5.5-inch. (140mm) display. The S7 Active has a stronger and more durable frame and a larger battery capacity. Galaxy S7 and S7 Edge are the last two phones in the Samsung Galaxy S series to feature a physical home button with a front fingerprint reader. The S7 Active is the last of the Active series to have three physical buttons with a fingerprint reader built into the Home button, aside from the prematurely discontinued Galaxy Note 7. This is the last Samsung Galaxy S series phone with MicroUSB. -B port which has since been superseded by USB-C technology. The Samsung Galaxy S7 was replaced by the Samsung Galaxy S8 in April 2017. Specifications Hardware Gold Galaxy S7 with headphone jack, micro USB 2.0 port, microphone and speaker grille Appearance The hardware design of the Galaxy S7 is largely the same as the S6. Samsung removed the built-in infrared blaster due to low demand. The device retains the metal and glass body but with improvements like a rectangular home button and a lower camera bump. Both models are available in black and gold; Available in white, pink, blue and silver depending on market.[11][12] As a global Olympic partner, Samsung has released special editions of the Galaxy S7 Edge for the 2016 Summer Olympics with a dark blue exterior and hardware and software accents inspired by the colors of the Olympic rings. The device was sold in limited quantities in selected markets and given away to athletes at the 2016 Summer Olympics.[13][14] In October 2016, Samsung announced a new light blue ("Blue Coral") color variant previously offered on the recalled Galaxy Note 7. The Galaxy S7 Edge includes software that allows the curved edge to act as a ruler, night clock, and various visual features, notifications such as the Edge[16] notification indicator for phone calls and incoming messages, for which you can select a preferred color. selected for five contacts. An additional setting is available to adjust the brightness of the built-in LED lamp between five brightness levels when used as a flashlight.[11][17] Waterproofing S7, S7 Edge and S7 Active are IP68 certified for dust and water resistance. Unlike the Galaxy S5, the ports are sealed and therefore do not require protective caps.[18][9] The S7, S7 Edge and S7 Active have a 1440p Quad HD Super AMOLED display. The S7 and S7 Active have a 5.1-inch panel, while the S7 Edge uses a larger 5.5-inch panel. As with the previous model, the S7 Edge's screen is curved along the side bezels of the device.[8][9] The charging port of the Galaxy S7 is equipped with a moisture sensor. If moisture is detected in the USB port, wired charging will be disabled to prevent damage to the device.[18][19][20] Batteries All three models (S7, S7 Edge and S7 Active) have larger batteries than the S6 with 3,000 mAh, 3,600 mAh or 4,000 mAh and support the wireless charging standards AirFuel Inductive (formerly PMA) and Qi. However, the S7 uses MicroUSB charging.[8][9][21][22] Wired charging supports Qualcomm Quick Charge 2.0 up to 15W.[23] It supports wireless charging with 7.5W effective power via a Qi 1.2-enabled wireless charging station connected to a Qualcomm Quick Charge 2.0 USB charger.[24][25] Samsung claims that the Galaxy S7 can be fully charged in 90 and 140 minutes with wired and wireless fast charging, respectively.aside S7.[26] Fast charging is prohibited while using the device.[27] Camera The Galaxy S7 and S7 edge are equipped with a 12-megapixel (4032 x 3024) rear camera with "Dual Pixel" image sensor technology for faster autofocus and an f/1.7 aperture lens.[5][8][9] Slow-motion videos are recorded in 720p HD at 240fps, twice the frame rate of the Galaxy S6 and Note 5. For the first time, Samsung's flagship device can record slow-motion video at 240fps. The 240 fps recording is encoded in real time and recorded with sound. Footage can be edited with previously released slow-motion video editing software.[28] Removed five minute time limit for 2160p videos.[29] The advanced burst mode captures twenty full-resolution photos per second, up to a hundred photos per line. The limit has been increased from thirty photos in one burst to about eight photos per second on the S6.[30][31] The camera was praised for its excellent low-light performance.[28][32] Still images can be captured at 1440p (30fps) and 2160p (30fps) during video recording, compared to 1080p on the previous model. However, still images cannot be captured while recording 1080p video at 60 frames per second.[28] The Galaxy S7 camera software has a mode to manually adjust performance parameters such as exposure, ISO sensitivity, white balance, and exposure value. Parameters can also be set for video recording. However, ISO and exposure settings are locked during video recording.[33] Also, the LED flashlight cannot be switched during video recording.[34] Chips The Galaxy S7 devices in China have an octa-core Exynos 8890 system chip and 4GB of RAM. In the United States, the S7 uses a quad-core Qualcomm Snapdragon 820; Unlike the Exynos, this SoC supports the legacy CDMA networks widely used by operators in these markets.[35][36] Heat from the processor is with a 0.4 mm thick water vapor cooling system, but still feels hot.[37] The S7 comes with 32, 64, or 128GB of internal storage (only the 32GB model will be available in most markets). Storage can be expanded with a microSD card.[8] S7 devices have a USB OTG adapter. It can be used in conjunction with the included Smart Switch app to make it easy to transfer content and settings from a previous Samsung Galaxy device running Android 4.3 or later, or an iPhone running iOS 5 or later, or a BlackBerry running operating system BlackBerry OS 7 or earlier. [38] Software Edge warning feature. The Galaxy S7 ships with Android Marshmallow (6.0) and Samsung's proprietary TouchWiz software suite. The new TouchWiz also allows the user to disable the app drawer. The new "always on" feature shows the clock, calendar and notifications on the screen when the device is in standby mode. The display turns off when the device's proximity sensor detects that it is in an enclosed space, such as a doorway. B. in the pocket. Samsung claims this feature consumes only half a percent of battery power per hour.[8][9] The S7 Edge's new widest panels can be displayed in "Edge Single" and larger "Edge Single Plus" sizes.[39] The memory feature adopted by Android Marshmallow is disabled and cannot be used.[40] A software update in September 2016 added support for Vulkan, a new low-level graphics API.[41] In January 2017, Samsung released an update to Android 7.0 "Nougat" that replaced TouchWiz with the Samsung Experience software suite (introduced on the Galaxy S6).[42] [43] In mid-2018, the S7 and S7 edge received Android 8.0 "Oreo", split screen and as a floating pop-up, the window is similar to the previous Galaxy S6.[44] The Galaxy S7 received generally positive reviews, with critics praising the return of the micro SD card and water resistance while maintaining the high-quality metal construction of the previous Galaxy S6.[45][46] The design of the larger Galaxy S7 Edge received particular praise as its curved edges are used in the S7 Edge to "make the phone much narrower than if it had a flat display." This makes the entire device smaller and more convenient to use. This can be clearly seen when placed next to other devices with 5.5-inch or similar screens, such as the iPhone 6s Plus (5.5-inch) and Google Nexus 6P (5.7 inch).).[47][48]] The quality of the main (rear) camera has been improved despite the reduction in megapixels from 16 MP to 12 MP, with a 1.4 micron increase in pixels and even faster focusing than its predecessor, the S6. The Galaxy S7 has been criticized for removing MHL and Galaxy S6 IR Blaster support.[51][52][53] music and video apps replaced by Google Play counterparts.[54] and including a Micro USB charging port instead of a USB Type-C port. C[55] Exynos version is faster than Qualcomm Snapdragon version for multitasking. There is a clear difference since the Qu alcomm version cannot support so many background applications and it takes longer to switch between them. However, the Snapdragon version performs better in graphics-intensive apps and games. iFixit gave the S7 a reparability score of 3 out of 10, noting the excess adhesive and the use of glass panels, and the fact that repairing some of the device's components (such as the motherboard and other components) is next to impossible without disassembling the case. screen. , which cannot be removed, and that it is "unlikely to replace the glass without damaging the display." Sales of the Samsung Galaxy S7 and Samsung Galaxy S7 Edge reached about 100,000 units within two days of their official launch in South Korea. Galaxy S7 sold 7.9 million units in the first month. In 2016, 48 million units were sold.[62] The Galaxy S7 Edge was the most popular phone in South Korea's 2016 lineup. The entry-level Galaxy J3 ranked sixth on the list of the most popular phones of 2016. The iPhone 6s had about 60 million shipments, while the Galaxy S7 edge and other Samsung phones had about 25 million.[63] Known issues Upon release, videos shot at high frame rates were stuttering on both Exynos and Snapdragon models. A subsequent firmware update is said to fix "video playback flicker after capture". Some S7 Edge devices have an unrecoverable vertical pink line on the screen that looks random.[66] Samsung offers free repair/replacement for users in Belgium/Netherlands/Luxembourg (only) under warranty as long as the screen has no external damage. [67] Repairing a broken screen is extremely difficult. If the user damages the Galaxy S7 screen, the AMOLED panel must be removed.[68] In the Philippines, September 23, 2016, a 36-year-old makeup artist with a Samsung Galaxy S7 Edge at a beauty salon in Antipolo City, Rizal with her 16-year-old daughter who was talking on the phone and started smoking through it to diffuse her smartphone. The owner of the smartphone stated that she would refund the money for a faulty smartphone purchased in April 2016, and management is investigating the incident.[69] Variations No sources are cited in this section.
