Internet gratis dengan ssh di android

Cara internet gratis dengan ssh di android. Cara internet gratis dengan akun ssh di android.

Unknown Goodnight's today's internet users. This time I would share a way or tutorial so you can access the Internet through your Android or your smartphone. Well free mas / MBAK, ... in today's era, lots of Internet users around the world, even Indonesian countries are almost over 70 percent of people can use the Internet. Even elementary school children can also use the Internet with which you can access with their smartphone. Even now everyone has a smartphone, you could also be one of them. Or you don't have a gadget and you want to buy, but you don't know the complete product information you want to buy. Just check it. Webbytekno.com you can get complete information about the technology world, making you refer if you want to buy a smartphone. OK, let's go back to the initial discussion of the HTTP injector configuration on Android. Now many operators sell contingent data packets at a fairly expensive price, what else for those of you who are still at school and those who do not work but need to access the Internet. You can use the HTTP injector that you can download directly and use it for free internet. Before going to the discussion, does anyone know what http injector? HTTP injector is very simple understanding, ie Android applications that are usually to run SSH and VPN which can be used safely for the production of an Internet connection. Wow what else is mas ssh and VPN, dizziness added. Hehehe we don't need to think that annoying things, we just discussed at the right point. So we need to set the SSH account to produce a load method so that it can be used for free internet connection. This http injector application can be used to use free internet connection. In fact, there are many operators in Indonesia. As Telkomsel, Indosat, XL, Axis, 3 operators and so on. Therefore, each operator also has several settings. But what makes this app very popular is, because there is no need to do Rott on the Androi smartphone when using this HTTP injector application. The first step that you can directly download the http injector application on the playstore and, of course, it is free, wau free once again, you can download directly http injector. To make it more stable when installing this application, it is better to restart your Android smartphone. After your samrthone turn back, just open the application, and how this is the original display. You can immediately run the application settings, just click Sttch 3 in the upper right corner, and select import Config just search for where you download Config HIA then you just have a Google DNS control list and start SSH, after importing your finished immediately able to click Start this application immediately, after starting it you can view the display log display that works, just click the Log tab next to the Home 000 tab After a successful message is displayed, you just need to use the Internet for free through your Android smartphone. If the problem persists, try repeating the procedure from the beginning, the possibility is still lacking. Thanks. They saw a complete review of how to use HTTP injector on Android. You can also check the proxy port to create an HTTP injector configuration. Don't forget to share this important information so that you know this complete information. And don't forget about subscribe, to always get the latest information. In this difficult age, one of the things It is to be able to access the Internet, without having to spend credit, even if necessary, free. There are several ways that allow you to enjoy Internet access more efficiently and without buying packages. DACKET DACKET What is offered by Indonesian mobile operators does not make our head spin, even if there are cheap sites, but only some that you can freely access. In reality from the past many of which can change some quota to be adjusted even without any packages that can access the internet as you like. Usually bugs are used by mobile operators that use some applications. Five ways to internet your Android phone without quotas and Pulsaberikik I share 5 free internet modes that are often used by oprekers. But for this you need to use these applications in particular to get insects of each operator. Bug from Telkomsel Mobile operators, XL, SmartFren, Axis, Indosat We can use using special applications, in order to get unlimited internet access without impulses. It can follow the way to get the Internet connection on Android phones like Samsung, Oppo, Xiaomi, Vivo, Infinix, Advan and EverCoss. 1. HTTP HTTP Injector injector is an application that uses proxy, SSH and VPN use access blocked sites. Also, with a bit of configuration you can make the internet connection paid to be free can use the Internet for free, you need some configurations or use the configuration file in .clao format that is a lot of disposing on the FB group file o Sfbobes site sharing. There are some config from HTTP injector this requires an SSH account, which can be made to the SSH provider website next to IP proxy to obtain free Internet access for all cellular operators such as Telkomsel, XL, Indosat, Axis and 3. For those who do not know how to use the HTTP injector so that the Internet can be free, please follow the following guide. Open an HTTP Injectort application in the three-point icon in the upper right corner. Then select Config. Choose config import. Select the configuration file. I downloaded. The start button or start. Wait for VPN to write to the status bar. This application is widely used in developing countries such as Indonesia, India, the Philippines, Africa and the state of La In. HTTP popular injector is not because it can access the blocked sites, but more On its ability to obtain free Internet access on different data packages provided by the manager also read:. How to Block 4G HP Realme All Type More Simple2. Custom HTTP is not very different from HTTP injector, this custom HTTP application also has the same function and with some Internet settings by cell operators can without cutting credit. Sometimes you need to buy a package before. Examples in some packages you get a 3GB altitude, but with a small contingent configuration you will be unlimited. If you are complicated to make your own settings to get Internet access without paying, you can use other people's configuration generally the file has an extension. custom HC HTTP application Click Yes. Last touch the Connect button. Wait until VPN logo appears. But it is very unpleasant that each configuration depends on the HTTP custom application version. If the person who made the configuration use an old version, you also need to use the version used by Share Config.3. KPN Tunnel REV KPN Tunnel One of the free Internet applications that you need to install on your Android phone, if you want to change the quota package to be adjusted. Tunnel PN uses configuration file with the .Tr extension. You can import and export a configuration as HTTP injector. Also, you can create your own configuration file or you can use KPN Opener Config Open the tunnel configuration file, tunnel, Settings menu (icon 3 icon 3 in the upper right corner) Select the configuration option The option is imports Select the configuration file there was a description of Tun2Socks: ... enter Loop event, indicates that it is He managed to access the Internet without the fear of staying short of altitude. Anonytun is the fourth choice to get free internet through the anonytun application. Tunnel art is a developer of this application, where he provided anonytun with many features that make it easier for users to make configuring the Internet can be free. You can use Anonytun application in all Android devices of OS Jellybean to the latest Android 9.0 cake. This application is relatively light and easy to use anonytun application. Choose a three-point adjustment at the top right corner TCP, HTTP, or SSL protocol connection. Click Edit Parent Proxy then fill in IP and Port. Click on the TCP protocol Edit Custom / HTTP Headers.is, URL / Host, Method request, Methode injection, interrogate metode, and additional headers. After that click on the Connect button. You just have to wait for the process to the Internet it can be connected, it will appear above the VPN. TLS tunnel One of the applications that are not less popular in the world of Gratongan is TLS tunnel. Many configuration file extensions starting from the United States, United Kingdom, Canada, Singapore and Hong Kong. There are many ports available in this application, like 80, 443 to 8888. Click on the menu in the upper right corner. Click Import / Export then select Import Config. Select the configuration file with the .tls extension that has been downloaded. Click Start. If a connection request appears, click OK. Conclusion In reality there are many free internet applications as above on the Play Store, but here I only share some of the most popular ones used by Gratongers. Furthermore, the applications above many share config so as not to have to worry about changing the configuration to find free Internet gaps from the operator. The four free Internet connection routes with this application requires an SSH account, you can create the account for free sites like fastsh.com, Cloudsh.us and so on. We hope that with the existence of some free internet modes via mobile phone, which will make it easier for youtube access, download movies, and various other sites without reducing the Internet share. You.
