PokBase - Pokmon Q&A Light Metal halves the Pokmon's weight in battle. Decreasing weight affects these moves:Grass Knot (lower damage when receiving)Heat Crash (lower damage when attacking, higher damage when receiving)Heavy Slam (lower damage when attacking, higher damage when receiving)Low Kick (lower damage when receiving) Game descriptions Other languages Scyther is a Bug/Flying type Pokmon introduced in Generation 1.Scyther is a green, insectoid Pokmon. It has large, blade-like forearms, a pair of wings on its back, and it stands on two clawed feet. Its head is topped with a pointed crest. Scyther's design is primarily inspired by a praying mantis.Scyther is unusual in that it has two evolutions spread across different generations. From Gold/Silver onward it can evolve into Scizor, and in Legends: Arceus a new evolution Kleavor was introduced. Each evolution changes its type, replacing Flying with Steel and Rock respectively. All three Pokmon also have the same base stat total of 500, however the distribution between the individual stats (Attack, Defense and so on) changes around. Generation 9 Generation 8 Generation 7 Generation 6 Generation 5 Generation 4 Generation 3 Generation 2 Scizor is a Bug/Steel type Pokmon introduced in Generation 2.Scizor is a red, metallic, ant-like Pokmon with yellow and black patterns on its pincers which resemble an eye pattern. Its body consists of three main parts: the torso, the abdomen and the head. It stands on two legs and has a pair of small wings located on its back which are used to control its body temperature, rather than flying. Scizor's habitat is lush and vast where it can reside with the rest of the swarm.Scizor evolves from the Bug/Flying type Scyther, thus losing its Flying type upon evolution - a rare occurrence for Pokmon.Scizor has a Mega Evolution, available in Generation 6 games and Pokmon Go.
