Deprecated by Cédric Luthi in Pull Request #1166. Updated by Jed Lewison in Pull Request #953. RequestAdapter to allow for asynchronous adaptation. Crash when multipart form data was uploaded from in-memory data on background session. Fixed Parameter encoding of ampersands and escaping of characters. Crash when requesting file:// URLs by producing validation error. Updated by James Barrow in Pull Request #771. The progress tracking system across all Request subclasses to improve accuracy. Removed The required declaration on the Manager init method. Added by Christian Noon in Pull Request #1450. The README code samples for Advanced Response Serialization. Fixed Issue where JSON and plist custom content types were not retained during parameter encoding. Sponsor Alamofire WacStadium provides Alamofire with a free, hosted Mac mini. Fixed by Brian King in Pull Request #1121. Fixed by Christian Noon in regards to Issue #740. The upload APIs for MultipartFormData to support custom boundaries. Crash when using requestDidParseAnyResponse when using ClosureEventMonitor. Updated by Christian Noon in Pull Request #489. Added by Christian Noon in Pull Request #2163. 3.0.0 Released on 2015-10-10. Updated by Florian Petit in Pull Request #3162. Project by adding .swift-version file and re-enabling pod lib lint in Travis file. rdar://26849668 - Some URLProtocol APIs do not properly handle URLRequest The following radars have been resolved over time after being filed against the Alamofire project. 5.0.0-rc.2 Released on 2019-09-08. The Travis-CI configuration to Xcode 7.2, iOS 9.2, tvOS 9.1 and watchOS 2.1. Updated by Christian Noon. Fixed Assorted memory leaks caused by underlying Swift runtime bugs. The ability to retry requests after encountering response serialization errors. Added Tests around the header behavior for redirected requests. Fixed by Jon Shier in Pull Request #1830. The iOS Example app deployment target to iOS 8.0. Updated by Christian Noon in Pull Request #1774. Result types to store an ErrorType instead of NSError. 5.4.1 Released on 2016-11-15. Added by Jon Shier in Pull Request #2135. The default tvOS and watchOS deployment targets in the Xcode project. It should appear nested underneath your application's blue project icon. The installation section of the README to use the current version. Parameter encoding failure docstrings and refactored reasons to be consistent. Updated by Marco Santarossa in Pull Request #2060. Added by Jon Shier in Pull request #1898 Fixed by Gemma Barlow in Pull Request #2767. Travis-CI test suite to run all tests on iOS 8.1, 8.2 and 8.3 as well as Mac OS X 10.10. Added by Jon Shier in Pull Request #2917. 3.0.0-beta.2 Released on 2015-09-26. SessionDelegate and all override closures to a public ACL allowing for customization. Tests for the custom header support with complete code signing identities on various targets. The ServerTrustPolicyManager policies property to use public ACL and added docstrings. Issue in DispatchQueue extension where Foundation needed to be imported for submodules. The top-level APIs by removing external resource parameter name. Fixed Runtime crashes due to overzealous state checking in SessionDelegate by reducing the severity of the assertions. Updated RequestRetrier completion to be escaping. TLS tests for tvOS 10.1 and added expiration test for revoked evaluation. Support for controlling retry behavior per Session and per Request #3185. Added by Jon Shier in Pull Request #2637. URLStringConvertible conformance on URLRequest. Due to these issues, Alamofire is unsupported on Linux and Windows. Updated by Jon Shier in Pull Request #3207. Added by Christian Noon in Pull Request #731. Added by Christian Noon in Pull Request #3207. Added by C the ServerTrustPolicy tests where a macOS 10.12 check was needed. Updated by Jon Shier in Pull Request #3419. Tests validating success and failure scenarios for DownloadOptions. Added Updated by Jon Shier in Pull Request #2441. Please do not post it to a public issue tracker. Updated by Sergey Demchenko in Pull Request #1420. Added by Christian Noon in Pull Request #504. Fixed Memory leak in Timeline description and debugDescription due to string interpolation. Fixed by dirtmelon in Pull Request #3180. The gueryComponents and escape methods in ParameterEncoding to public to better support. Custom encoding. Issue in AFError where wrong case was used in several property implementations. Fixed by Christian Noon in Pull Request #2786. Updated by Jon Shier in Pull Request #3164. Fixed by Jon Shier in Pull Request #1027 in regards to Issue #1025. Fixed by Jon Shier in Pull Request #3199. Small ACL issue in code sample of the Handling Errors section of the README. Updated Automatic resume() behavior to be called after task creation. The SessionDelegate subscript public to allow full control when subclassing. Updated by Christian Noon in Pull Request #401. Typo in Alamofire 5 migration guide. Fixed Issue where the test suite was accidentally deleting contents of ~/Library/Application Support on macOS. Added Host and certificate chain validation section to the README. iOS deployment target to iOS 8.0 for iOS target and tests. This has many advantages, the most obvious being that the response convenience method now returns an NSData? Code signing to automatic with no team on framework, test and app targets. Updated Various framework internals to make porting to Linux easier. If you believe you have identified a security wilnerability with Alamofire, you should report it as soon as possible via email to security@alamofire.org. NetworkReachabilityManager to simplify and modernize its API. Issue where the background session completion handler was not called on the main queue. Updated by Christian Noon in regards to Issue #1160. SessionDelegate internal implementation by removing redundant optional unwrap. Added Error mapping functions to Response types. Separation of Usage and Advanced Usage and Advanced Usage docs from README. Added by Christian Noon in Pull Request #494. Updated by Alexander Strakovich in Pull Request #3075. Added by Christian Noon in Pull Request #1462. Tests for various Cache-Control headers with different request #1455. Compiler error in the example app. rdar://36082113 - URLSessionTaskMetrics failing to link on watchOS 3.0+ (Resolved): Just add CFNetwork to your linked frameworks. Added by Kengo Yokoyama in Pull Request #579. The global request / download / upload method external parameters convention. 3.2.1 Released on 2016-02-27. Updated by Jon Shier in Pull Request #2648. The request method to the Manager bringing it more inline with the top-level methods. Carthage description and installation instructions in the README. The isWildcard property to MIMEType struct for convenience. Typos in documentation. Fixed Incorrect header convenience method in Usage documentation. Framework and test target override settings that duplicated the project settings that duplicated the project settings. Updated Dispatch-based synchronized access to subdelegates. Fixed by Nicky Gerritsen in Pull Request #780. The MultipartFormData contentType property to be mutable. Nice! Please note that every effort is taken to maintain proper semantic versioning. Fixed by Christian Noon in regards to Issue #721. The Xcode project, source code, SPM package, and podspec to support Swift 5 only. Updated by Kevin Harwood, Jon Shier and Christian Noon. Alamofire builds on Linux and Windows but there are missing features and many issues in the underlying swift-corelibs-foundation that prevent full functionality and may cause crashes. 5.0.0-rc.3 Released on 2019-10-26. Updated by Christian Noon in regards to Issue #738. The testDownloadRequest to no longer remove the downloaded file Added by Christian Noon in regards to Issue #1553. Extraneous dispatch to background by using weak reference for delegate in response. In these two rare cases, it was deemed to be in the best interest of the community to slightly break semantic versioning to unify naming conventions as well as expose a much more powerful form of response serialization. Issue where the challenge and response SessionDelegate override closures were not called by Kyle Fuller in Pull Request #574. Fixed Async tests where asserts were potentially not being run by by moving expectation.fullfill() to end of closures. Added Combine support! DataResponse Publisher, DownloadResponsePublisher, and DataStreamPublisher to stream Alamofire iOS Tests as Target Dependency. The README to require Xcode 7 beta 6. Request task property is now optional allowing errors to propagate through. The Alamofire 4.0 Migration Guide to the README. Added by Mattt Thompson in regards to Issue #393. An issue where the SessionManager did not respect retry time delay. Added Support for GitHub Actions for CI. Fixed by Christian Noon in Pull Request #2783. Section to the README about new HTTP header support in the global functions. By making them consistent across the board, this introduced the possibility that you "may" need to make slight modifications to your global function calls. Updated by Christian Noon in regard to Issue #537. The SessionDelegate to store Request instances internally to prepare for retry logic. Updated by Christian Noon in regard to Issue #537. The SessionDelegate to store Request instances internally to prepare for retry logic. would have had to go through 6 additional MAJOR versions if this was the policy. Added by Jon Shier in Pull Request #2016-11-20. All HTTP requests to accept a custom queue for execution. 1.1.5 Released on 2016-11-20. All HTTP requests to HTTPS to better align with ATS. Updated All instances of com. alamofire with org. alamofire throughout the project. Request APIs. Updated All source, test and example logic as well as project settings to compile against the Xcode 8 beta releases. Fixed by Jon Shier in Pull Request #2740. Removed by Jon Shier in Pull Request #2521. A UTF-8 charset to Content-Type header for a URL encoded body. Updated Installation instructions in the README to include CocoaPods, Carthage and Embedded Frameworks. Fixed by Jon Shier in regards to Issue #1938. Top level request API to be inside a real AF namespace enum rather than unnecessary Alamofire. Added by Christian Noon in Pull Request #175. The server certificates for the TLS tests and added all certificates to all test targets. Fixed Issue on Windows where the wildcarded cert name in the test suite included asterisk. Added by Bob Scarano in Pull Request #767. Deployment targets to iOS 7.0 and Mac OS X 10.9. Updated by Mattt Thompson. RequestTests to no longer delete all cookies in default session configuration. Added by Aron Cedercrantz in Pull Request #1792. The playground from the project due to instability reasons. Parameters dictionary. For usage and installation instructions, visit their website. Fixed by Aaron Brager in Pull Request #413. Added Missing @escaping annotation for session delegate closures. Updated by Jan Riehn in Pull Requests #2691 and #2765. Added [Experimental] support for Swift Concurrency, including async-await for requests and StreamOf for streaming values. Fixed MultipartUpload thread-safety. Travis CI yaml file to enable watchOS 3.2 builds. Bundle identifiers to include the platform name, fixing ITMS-90806. Added by Christian Noon in Pull Request #1053. URL variants to the FileManager extension in the test suite. The betas WILL NOT follow semantic versioning. SSL validation to use default system validation by default. Fixed Typo in ServerTrustEvaluating documentation. Fixed Requests not finishing when their controlling Session is deinitd or invalidated. Typo in the API Parameter Abstraction in the README. Fixed by Jon Shier in Pull Request #3187. Added Notifications that post when an NSURLSessionTask changes state to allow support for the network activity indicator. Content type validation to

always succeeds when server data is nil or zero length. ServerTrustFailureReason to AFError. Fixed by Jon Shier in Pull Request #2807. Updated Resume data handling for DownloadRequests to access resume data from errors as well as cancellation. An example in the README to use proper error checking in download response handler. Added by

```
Jon Shier in Pull Request #2863. Issue where suggestedDownloadDestination parameters were being ignored. Added by Christian Noon in Pull Request #648. You can verify which one you selected by inspecting the build log for your project. The Travis-CI device list in the yaml file. Example to the README demonstrating how to use the
response Collection serializer. Fixed 4.7.1 Released on 2018-3-31. 4.6.0 Released on 2017-12-3. Updated Response initializer to have internal ACL. The tvOS deployment target to the podspec. Fixed by Christian Noon in regards to Issue #723. Indentation formatting of the response String parameter documentation. Issue in README sample code
where PNG representation API was incorrect. Added Request property overrides to fallback on original task if available. Updated ResponseSerializer and associated protocols' requirements and implementations. 5.4.0 Released on 2020-10-17. Several issues with the iOS and OSX targets in the Xcode project. Updated ResponseSerializer and associated protocols' requirements and implementations.
to use https instead of http. Signature mismatch in the dataTaskDidBecomeDownloadTask override closure. Giddins in Pull Request #2770. Fixed by Jon Shier in Pull Request #2770.
property. Fixed Issue in RequestInterceptor closures where callback arguments were not marked as @escaping. 2.0.0-beta.1 Released on 2015-08-10. Fixed by Mattt in Pull Request #3053. Updated by Christian Noon in Pull Request #2892. A CHANGELOG to the project
documenting each official release. Asynchronous cURLDescription method to produce cURL commands for Request #250. Updated by Christian Noon in Pull Request #795. Added by Jon Shier in Pull Request #3543. 1.3.1 Released on 2015-08-
10. Fixed Content type validation issue where parameter parsing on; was incorrect. DataTaskDelegate behavior ensuring NSProgress values and progress override closures are always updated by Jon Shier in Pull Request #2965. Added by Christian Noon in Pull Reguest #2965.
Request #586. Added by Jon Shier in Pull Request #2903. Request #2904. Updated by Aleksandar Vacić in Pull Request #249. Compiler warnings when
building for Catalyst by updating the usage of deprecated API. Updated by Jon Shier in Pull Request #3059. Updated by Jon Shier in Pull Request #3115. Added Updated by Jon Shier in Pull Request #3059. Updated by Jon Shier in Pull Request #305
functions. Legal characters to be escaped according to RFC 3986 Section 3.4. Updated by Stephane Lizeray in Pull Request #370. Updated by Christian Noon in Pull Request #2704. AFError message regarding unacceptable Content-Types to sort the types. Next, select your application project in the Project Navigator (blue project icon) to navigate to
the target configuration window and select the application target under the "Targets" heading in the sidebar. Updated by Robert Rasmussen in Issue #610. Updated by Arnaud Mesureur in Pull Request #247. The radars section of the README to split out
open vs. Updated by Christian Noon in regard to Issue #652. The deployment targets to iOS 8.0 and macOS 10.10. Basic auth example in the README to compile on Swift 2.0. Updated by David F. Ability to inject FileManager instance into UploadRequest. It contains configurable delay timers to help mitigate flicker and can support URLS ession
instances not managed by Alamofire. 3.4.2 Released on 2016-08-28. Tests for all the SessionDelegate override closures. Removed Unnecessary public ACL declarations on AFError extensions. Use of URLRequest.headers extension property in URLEncoding. Added by Jon Shier in Pull Request #3553. Updated 1.0.1 Released on 2014-10-20. Updated
by Christian Noon in regards to Issue #668. Full screen support in the iOS Example App. Added by Jon Shier in Pull Request #1558. BaseTestCase to delete contents of common directories at the start of each test. Fixed By Victor Chee in Pull Request #1558. BaseTestCase to delete contents of common directories at the start of each test.
contributing to Alamofire, please read the instructions detailed in our contribution guide. Fixed Compatability with SPM from Xcode project to set APPLICATION EXTENSION API ONLY to YES for OS X target. 2.0.2 Released on 2015-09-20. Updated
by Christian Noon in Pull Request #1465. Typo in AF 4 migration guide where "enhancements" was spelled incorrectly. Updated by philtre in Pull Request #2898. Removed downloadProgress and uploadProgress and uploadProgress Int64 variants. Updated by Eric Desa in Pull Request #2898. Removed downloadProgress and uploadProgress and uploadProgress and uploadProgress Int64 variants.
work on Xcode 6.1. Updated by John Beynon in Pull Request #187. Fixed by John Beynon in Pull Request #2977. 5.0.0-beta. Released on 2019-01-07. Fixed by Vishrut Shah in Pull Request #187. Fixed by John Beynon in Pull Request #187. Fixed by Vishrut Shah in Pull Request #187. Fixed by John Beynon in Pull Request #187. Fixed by
09. Added by Christian Noon in Pull request #1865. Exposed persistence parameter for basic auth credentials. Response serialization to use generics and a Response Serializer protocol. Compiler issue on OS X target when creating background configurations in the test suite. Fixed by Tom Brow in Pull Request #1863. The
NetworkReachabilityManager to have a public instead of open ACL. The parameter order of custom URLRequest initializer to match other APIs. Updated by Christian Noon. New value and error computed properties to data and download responses. Fixed by Mattt Thompson in regards to Issues #146 and #162. Updated by Christian Noon in Pull
Request #1774. Select the Alamofire.xcodeproj in the Project Navigator and verify the deployment target matches that of your application target. Added Custom Info.plist for tvOS setting the UIRequiredDeviceCapabilities to arm64. A README entry about
installing through SPM. To integrate Alamofire into your Xcode project using CocoaPods, specify it in your Podfile: pod 'Alamofire' Carthage is a decentralized dependency manager that builds your dependencies and provides you with binary frameworks. TaskDelegate override closure signatures and delegate method implementations. Added by
Jonathan Hersh in Pull Request #424. Added by Christian Noon in Pull Request #3504. All source, test and example logic as well as project settings to compile against Xcode 7 and 8 against Swift 2.2 or 2.3 respectively. The TaskDelegate to store an error as an NSError instead of ErrorType. The README to reflect the best error practices in response
serializers. Registering will allow Foundation members to gain some legal protections and also allow us to put donations to use, tax-free. We still have quite a few large changes we're trying to squeeze in before the Xcode 8 GM drops, so the APIs will continue to change over the next few weeks. RetryPolicy to properly conform to RequestInterceptor.
Updated by rain2540 in Pull Request #3268. DownloadRequest to avoid producing resume data when not explicitly requested on cancellation. Possible exception when force unwrapping optional header properties. Regression from Alamofire to reject NTLM and Negotiate authentication methods. Added Tests around content type
validation with accept parameters. There may be breaking changes until 5.0.0 is released. Parameter moduce an error. Deployment targets to iOS 8.0 and OS X 10.9 for the respective frameworks. Unit tests for all the testable network
reachability manager APIs. Added by Christian Noon in Pull Request #1053. Migration Guide for Alamofire 5. Support for controlling cached response Handler protocol. Updated by Christian Noon in Pull Request #2713. The "[" and "]" to the legal escape characters and added more
documentation. Added Updated Upload and Download progress state to be updated before calling progress closure. Added by rain2540 in Pull Request #1723. Code to use switch instead of if else statement. All errors produced by Alamofire to be AFError by default. 4.9.0 Released on 2019-09-03. Response
status code asserts for redirect tests. Fixed by Jon Shier in Pull Request #3421. Removed The mention of rdar://22307360 from the README by removing extraneous force unwrap. Fixed by Jon Shier in Pull Request #3179.
Removed An unnecessary NSURLSessionConfiguration type declaration that can be inferred. Added by Jon Shier in Pull Request #3102. 4.4.0 Released on 2017-02-26
Added by Matthias Ryne Cheow in Pull Request #140. TLS evaluation test case. Added URLEncodedFormEncoder. The Alamofire Result type to be a new AFResult type alias on the new Swift. Result type in Swift.
5 and removed all public extensions. All logic to Swift 1.2. Updated by Aron Cedercrantz and Mattt Thompson. Updated by Jon Shier in Pull Request #2818. Interceptor to be initialized with multiple RequestInterceptors, in addition to
RequestAdapters and RequestRetriers. Cache control through CachedResponseHandler and associated APIs is unavailable, as the underlying delegate methods aren't called. AF namespace to be a reference to Session.default. Added Support for HTTPMethod.query to support the upcoming standard. Updated by Jon Shier in Pull Request #1722
RequestAdapter tests on all testable SessionManager request APIs. Added by Christian Noon in Pull Request #408. Updated by Andrey Chernoprudov in Pull Request #2184. Added New
testURLParameterEncodeStringWithSlashKeyStringWithSlashKeyStringWithQuestionMarkValueParameter test. Updated by Christian Noon in Pull Request #1880. Fixed 5.4.4 Released on 2021-09-20. Updated by Mattt in Pull Request #2736. Updated by Gustavo Barbosa in Pull Request #759. Fixed by Dwight
Watson in Pull Request #750. Updated The README to include tvOS and bumped the required version of Xcode. Fixed by Adrian Kashivskyy in Pull Request #2025. The request / download / upload methods to support custom
headers. Updated by Jon Shier in Pull Request #3523. Updated The User-Agent header implementation to use more aggressive type-safety checks. Fixed Issue where the TaskDelegate operation queue would leak if the task was never started. The cURL representation logic to no longer force unwrap URLCredential values. Updated by Jon Shier in Pull
Request #2728. Ono XML response serializer example in the README. Updated by Jon Shier in Pull Request #2845. Updated by Jacob Jennings in Pull Request #256. dependencies: [.package(url: ",.upToNextMajor(from: "5.6.1"))] If you prefer not to use any of the aforementioned dependency managers, you can integrate Alamofire into your
project manually. Removed Duplicate auto-code signing on macOS. Added by Christian Noon in regards to Issue #798. Updated Bundle identifiers to include the platform name, fixing ITMS-90806. iOS 7 instructions in the README. Fixed by Jan Kase in Pull Request #639. Fixed by Jon Shier in Pull Request #2966. An unnecessary availability check
now that Xcode 7.1 is out of beta. Support for stream tasks in iOS 9+ and OSX 10.11+. 3.2.0 Released on 2016-02-07. SessionDelegate methods to first call the override closures if set. Fixed by Andy Ron in Pull Request #2244. Tests around response data, string and json serialization result behavior. The README and migration guide with the
URLConvertible and top-level API changes. Jazzy docs for the release to work with GitHub Pages. Issue in URLProtocol test where config headers are not passed prior to iOS 9.0. Issue where Request cURLRepresentation method was not coalescing duplicate headers. Updated by David F. Typos in the Open Radars and Donations sections of README
Generic static accessors for various protocols types for Swift 5.5. Added by Jon Shier in Pull Request #3499. URLS essionTaskMetrics gathering on watchOS 7+. Issue in the README where the POST request with parameters example was using the wrong method. 4.8.1 Released on 2019-01-15. The Parameter Encoding encode method to allow empty
parameters to still be encoded. Added Support for NSURLAuthenticationMethodClientCertificate when handling auth challenges using URLCredentials. Fixed by Josh Brown in Pull Request #500. 2.0.0 Released on 2015-09-09. Updated iOS 7 instructions to cover multiple Swift files in the README. Added Closure callback APIs for the production of
URLRequests and URLS ession Tasks. Fixed 5.0.2 Released on 2020-02-23. Percent escaping tests around reserved / unreserved / unreserved
along with unit tests. RequestAdapterState and new protocol requirements for RequestAdapter to allow for additional state to be available. Added by Mattt Thompson in regards to Issue #464. Fixed by Antoine Cœur in Pull Request #2212. Xcode project APPLICATION EXTENSION API ONLY flag to YES. Added Initial release of Alamofire. Updated
by Syo Ikeda in Pull Request #557. Added by Christian Noon in regards to Issue #473. Documentation issues. 1.0.0 Released on 2014-09-25. The TaskDelegate.queue to public to allow custom request extension operations. Note: Alamofire will
not be following semantic versioning during the beta process. Added by Christian Noon in regards to Issue #1818. Updated by John Pope in Pull Request #665. Download response serialization tests for all
serializer types. Fixed 4.0.0-beta.2 Released on 2016-08-29. Removed by Christian Noon Fixed A compiler error in response validation sample code in the README. Fixed Change in multipart upload creation order. Updated by Jon Shier in Pull
Request #2901. Challenge issue where basic auth credentials were not being unwrapped. Removed by Jon Shier in Pull Requests #2254 and #2521. New authorization header API to generate base64 encoded authorization header. Deprecated The errorWithCode APIs and updated NSURLError* domains to NSURLErrorDomain. 4.8.0 Released on
2018-11-24. Instead, we try to carefully plan our MAJOR version releases and accompany them with detailed Migration Guides to help make the transition as smooth as possible. The Travis CI YAML file to use Xcode 7.3 and also updated matrix targets. Fixed by Fuad Kamal in Pull Request #1599. Response handler extensions by moving them into
DataRequest and added equivalents for DownloadRequest. Added by Christian Noon in Pull Request #627. All frameworks to set the enable testability flag to YES for release builds. CocoaPods and Carthage installation instructions for 3.0. Updated by Christian Noon. cURL representation implementation readability. A Resume Data section to the
README inside the Downloads section. Updated by Christian Noon in Pull Request #1682. Updated by Christian Noon in Pull Request #1760. Code sample in the README in the Manual
Parameter Encoding section. GitHub Actions support for greater OS coverage, more SPM platforms, and Swift 5.6. Updated by Jon Shier in Pull Requests #3534, #3545, #3570, and #3587. Updated by Luis Ferro in Pull Requests #3534, #3545, #3570, and #3587. Updated by Luis Ferro in Pull Request #1288. Added by Kyle Fuller in Pull
Request #279. Updated by Christian Noon in Pull Request #1172. Updated by Christian Noon in Pull Request #2804. 5.2.2 Released on 2020-07-17. Parameters to increase safety. You will see two different Alamofire.rent of the Alamofire.framework nested inside
a Products folder. Updated Package.swift for Swift 5 support, moving Swift 4.2 support to Package@swift-4.2.swift. Features Component Libraries Requirements Migration Guides Communication Installation Contributing Usage Advanced Usage Open Radars FAQ Credits Donations License [x] Chainable Request / Response Methods [x] Swift
Concurrency Support Back to iOS 13, macOS 10.15, tvOS 13, and watchOS 6. Percent character encoding for the + character encoding for
URLEncodedFormParameterEncoder. If you use any of our libraries for work, see if your employers would be interested in donating. The OS X tests so that they are all passing again. A new debugDescription test for a MultipartFormData Request with duplicate headers. Fixed by Ulug'bek Ro'zimboyev in Pull Request #1866. Updated 4.7.2 Released
on 2018-4-15. Added by Jon Shier in Pull Request #2521. Removed Fixed Issue in the URLProtocolTestCase where HTTP header capitalization was wrong due to httpbin.org change. Removed by Justin Jia in Pull Request #1503. Added by Christian Noon in Pull Request #2521. Removed Fixed Issue in the URLProtocolTestCase where HTTP header capitalization was wrong due to httpbin.org change.
stand in for an empty response. Alamofire's didResume notification to didFinish, which is now called when a Request functional API, renaming flatMap to tryMap. Updated by Christian Noon in Pull Request #1391. This will be rare and compatibility
should be preserved in most cases, but cannot be guaranteed. Fixed by Mattt Thompson in regards to Pull Request #213. Added by Syo Ikeda in Pull Request #810. All frameworks to enable code coverage generation. Updated by Anthony Miller in Pull Request #954. 1.2.2 Released on 2015-05-13. Added by Christian
Noon in regards to Issue #1303. The static error convenience functions to a public ACL. Fixed Small formatting issue in the README. Added by Christian Noon in Pull Request #792. The generation of the User-Agent header to use non-localized sources. Embedded framework installation instructions. 4.7.0 Released
on 2018-3-5. This no longer produces an error but will instead trigger the normal Request lifetime methods. The SessionDelegate and subclasses by pulling them into the global namespace. The AlamofireRequestDebugDescriptionTestCase on OSX. Security section to the README detailing various server trust policies. Unnecessary calls
to self throughout source, test and example logic. Added SwiftPM testing support. Fixed by Scott Talbot in Pull Request #2747. Precondition to ensure Session can't be used with background URLSessionConfigurations. Names of the notifications posted by Request to include Notification. Updated by Christian Noon in Pull Request #1457. Added by
Tiago Lopes in Pull Request #3516. Incorrect response type in the response README examples. A migration guide for Alamofire 3.0 documenting all API changes. Fixed by Florent Vilmart and Mattt Thompson in Pull Request #241. Updated Request computed property
progress to no longer be an optional type. Updated by Christian Noon in regards to Pull Request #2778. Added by Jon Shier in Pull Request #2778. Objective-C module conflicts in Xcode 12 by removing Obj-C module support. Fixed by Christian Noon in Pull Request #2778.
Request #598. Updated by Aaron Brager in Pull Request #2796 in Regards to Issue #2759. Any amount you can donate, whether once or monthly, to help us reach our goal would be greatly appreciated. Updated Project and CocoaPods installation of Obj-C header. Once you have your Swift package set up
adding Alamofire as a dependency is as easy as adding it to the dependencies value of your Package.swift. Added by Christian Noon in regards to Issue #692. Added by Pablo Bartolome in Pull Request #1984. Download by Christian Noon in regards to Issue #692. Added by Dallo Bartolome in Pull Request #1984. Download by Christian Noon in regards to Issue #692. Added by Dallo Bartolome in Pull Request #1984. Download by Dallo Bartolome in Pull Request #1984. Downloa
task delegate to store resume data for a failed download if available. Updated by StevenArmandLee in Pull Request #2720. Project to require Swift 5.1. Updated by Jon Shier in Pull Request #2360. Travis-CI test suite to run pod lib lint against the
latest version of CocoaPods. Fixed by Jon Shier in Pull Request #3555. Tests for uploading base 64 encoded components. Fixed by Jon Shier in regards to Issue #1626. Added Internal DispatchQueue extension set of convenience properties
and methods. Fixed Issue where a completed task was not released by the SessionDelegate if the task override closure was set. Added The AlamofireExtended protocol and used it to namespace all public extensions. Fixed by Christian Noon in Pull Request #3438. Updated by Christian Noon in regards to Issue #782. Support for
PropertyListSerialization and responsePropertyList. These include: ServerTrustManager and associated certificate functionality is unavailable, so there is no certificate functionality is unavailable, so the certificate functionality is unavailable, and the cert
3.3.1 Released on 2016-04-06. Updated All TLS evaluation tests from disig.sk to badssl.com to be more reliant and robust. FB7624529 - urlSession(:task:didFinishCollecting:) never called on watchOS (Resolved): Metrics now collected on watchOS 7+. See LICENSE for details. Updated by Christian Noon in Pull Request #595. Top-level APIs for
creating StreamRequest instances. 5.4.2 Released on 2021-04-03. Issue with AppStore submissions where the pre-release version in the bundle short versions string was being rejected when built with Carthage or as a submodule. Base Swift language version requirement to 5.3. Updated by Jon Shier in Pull Request #3495. Added by Christian Noon
in Pull Request #1262. Travis-CI to use Xcode 6.1.1. Updated by Mattt Thompson. Fixed by Christian Noon in Pull Request #3449. 4.7.3 Released on 2018-7-8. Updated by Christian Noon in Pull Request #3449. 4.7.3 Released on 2018-7-8. Updated by Christian Noon in Pull Request #3449. 4.7.3 Released on 2018-7-8. responses. Updated Code signing on iOS simulator builds to not sign simulator builds. Updated by Christian Noon in Pull Request #1172 in regards to Issue #1145. Duplicated change log message in the migration guide. Added Updated by Christian Noon in Pull Request #3431. The certificatesInBundle to support cer, crt
and der extensions. Fixed Issue where AdaptError instances were being incorrectly sent to the Request #982. Issue where response serializer completions were not called when appended to a completed Request #982. Issue where response serializer completions were not called when appended to a completed Request #982. Issue where response serializer completions were not called when appended to a completed Request #982. Issue where response serializer completions were not called when appended to a completed Request #982. Issue where response serializer completions were not called when appended to a completed Request #982. Issue where response serializer completions were not called when appended to a completed Request #982. Issue where response serializer completions were not called when appended to a complete formation and the response serializer complete formation 
Parameter Encoding encode return tuple to return a mutable URL request. Updated by Christian Noon in Pull Request #2764. Fixed SessionDelegate override closure documentation. Updated by Christian Noon in Pull Request #2764. Fixed SessionDelegate override closure documentation.
Experimental ] features may require breaking changes in minor, rather than major, releases. Fixed by Vishrut Shah in Pull Request #1615. Updated by Jon Shier in Pull Request #2198. AlamofireImage - An image library including image response serializers, UIImage and
UIImageView extensions, custom image filters, an auto-purging in-memory cache, and a priority-based image downloading system. The URLRequest #2135. Added by Jon Shier in Pull Request #2135. Added by Jon Shier in Pull Request #2979. 3.3.0
Released on 2016-03-23. Updated Project settings, GitHub Actions, tests, and formatting for newer Xcodes. Added by Jon Shier in Pull Request #2858. Fixed by Christian Noon in Pull Request #2851. A deinit race condition
where the task delegate queue could fail to dispatch release. Issue in the test suite logic on macOS 10.12. The global request / download / upload external parameter naming conventions were not consistent nor did they match the Manager equivalents. Updated Usage of .background DispatchQoS to .utility to avoid low-power issues. Issue in TLS tests
where root certificate was missing from server trust. Fixed by Christian Noon in regards to Issue #1551. Updated by Eunju Amy Sohn in Pull Request #2125. Added by Josh Brown in Pull Request #2126. Reliability issues with DataStreamRequest. Some inaccurate documentation on several of the public SessionDelegate closures. All cases of force
better legal safety for the core members. Fixed by Aleph Retamal in Pull Request #2728. Request retryCount property to support the RequestRetrier. Updated by Jon Shier in Pull Request
#2585. Added A new Alamofire/Alamofire Gitter channel and also added badge to the README. Crashes may occur if responses contain server challenges. Typo in the README around response handlers. Sample app to show proper loading state for requests. Serialization handling of NSData with 0 bytes. Added by Sai in Pull Request #718. Fixed
Empty parameters being encoded as an empty String instead of nil by URLEncodedFormEncoder. Added by Jon Shier in Pull Request #2905. 4.0.1 Released on 2022-04-13. Fisher in Pull Request #1515. The resumeData property to Request to expose outside
data response serializer. All tests around response serialization and Result type usage. Note: Alamofire 5 is now API stable. Memory leak in Validation closures where reference to self was causing retain cycle. Updated by Jon Shier in Pull Request #2059. Updated by Christian Noon in Pull Request #2263.
Re-enabled Travis-CI tests for both iOS and Mac OS X. Updated by Michael Thole in Pull Request #394. Removed by Christian Noon in Pull Request and response bodies to Request and response bodies to Request #394. Removed by Justin Jia in Pull
Request #1520. Added by Dave Verwer in Pull Request JSON response test. Removed All excess whitespace from Swift files using the Cleanup Whitespace target. Fixed Request casting issue on retry that could lead to incomplete
retry of UploadRequests. Added by Jon Shier and Alex Taffe in Pull Requests #3446 and #3462. Memory leak when using validate(). An Alamofire will be listed as Alamofire wolf, and all amofire wolf, a
path to router example in README. Timeline generation to DefaultDataResponse and DefaultDownloadResponse and DefaultDownloadResponse and DefaultDownloadResponse. To integrate Alamofire into your Xcode project using Carthage, specify it in your Cartfile: github "Alamofire into your Xcode project using Carthage, specify it in your Cartfile: github "Alamofire" The Swift Package Manager is a tool for automating the distribution of Swift code and is integrated into the swift
compiler. Parameter encoding tests for key/value pairs containing spaces. Alamofire will explicitly support such functionality at some point in the future. Fixed by Adrian Brink in Pull Request #1315. The MultipartFormData data APIs by condensing them using optional parameters. Fixed by Christian Noon in regards to Issue #1438. Fixed by Kevin
Harwood in Pull Request #1141 in regards to Issue #1140. Fixed by 蒲公英の生活 in Pull Request #605. Added by Josh Brown in Pull Request #471. We are greatly humbled by your enthusiasm around the projects and want to continue to do everything we can to move the needle forward. The
.DS_Store ignore flag to the .gitignore file. Updated by Jonathan in Pull Request #2930. Framework version string to be compatible with TestFlight and AppStore releases 5.x Releases 4.x Releases 4.x Releases 5.6.1 Releases 5.x Releases 5.x Releases 4.x Releases 5.6.1 Releases 5.6.1 Releases 5.6.1 Releases 5.6.1 Releases 5.x Releases 5.x Releases 5.6.1 Releases 5.6
Released on 2015-12-16. New server trust policy for revoked certificates along with matching tests. Updated Handing of file:// URLs, removing error added in 5.3.0 and adding support for DownloadRequest. Fixed Issue in Request where calling cancel() inside a response serializer would result in the serializer running again. The ValidationResult
failure case to require an NSError instead of ErrorType. Fixed by Christian Noon in Pull Request #456. Updated Response serializer. The ASF is looking to raise money to officially stay registered as a federal non-profit organization. Added Test case around NSURLProtocol checking header
passthrough behaviors. Typo in a download test comment. Updated by Jon Shier in Pull Request #2361. Fixed by Mike Owens in Pull Request #254. Updated by Jon Shier in Pull Request #261. Fixed by Jon Shier in Pull Request #261. Fixed by Mike Owens in Pull Request #254. Updated by Jon Shier in Pull Request #261. Fixed by Mike Owens in Pull Request #261. Fixed by Jon Shier in Pull Request #261. Fixed by Jon
Request #2521. Updated Response handlers to take all serializer parameters. The new URLSessionTaskMetrics to all Response types. Link to the README to the Response types. Link to the README to take all serializer parameters. The new URLSessionTaskMetrics to all Response types. Link to the README to the Response types. Link to the README to take all serializers to use the new Response type. Please keep in mind that each beta will likely bring new APIs and also refactor others.
Updated by Christian Noon in Pull Request #1330. Updated by John Heaton in Pull Request #903. 2.0.0-beta.3 Released on
2015-08-25. Testing on watchOS. Added by Jon Shier in Pull Request #3236. Updated by Christian Noon in Pull Request #1865. 5.0.0 Released on 2020-02-14. All public docstrings to the latest Swift 2.0 syntax. Updated by Petr Korolev in Pull Request #478. Issue in response serializers where emptyResponseAllowed logic was not working as
expected. Added by Jon Shier in Pull Requests #2265 and #2657. resolved radars. Memory leak when using an @autoclosure. Added by Jon Shier in Pull Request #2890. Issue in the sample code of the README where response.error was used incorrectly. Updated by Jon Shier in Pull Requests #2890. Issue in the sample code of the README when using an @autoclosure. Added by Jon Shier in Pull Requests #2890. Issue in the sample code of the README when using an @autoclosure.
Pull Request #2628. Handling of response serializers appended after a Request #3010. Updated by Concept #3010. Updated by 
pinning support through the ServerTrustPolicy. And that's it! The Alamofire framework is automagically added as a target dependency, linked framework and embedded framework in a copy files build phase which is all you need to build on the simulator and a device. Added by Christian Noon in Pull Request #1099. Memory leak in
NetworkReachabilityManager. The Adapter, Retrier, and Interceptor types to provide fine grained control of retry behavior. Updated Project for Xcode 9.3 and Swift 4.1 release versions. Added Status code and content type values into validation NSError userInfo dictionaries. Reachability by removing explicit IPv6 logic since OS handles this
automatically. Fixed by Chris Richards in Pull Request #1186 in regards to Issue #1184. Updated by Christian Noon in Pull Request response method had to be converted
to a generic method leveraging the new ResponseSerializer protocol. Updated by tomisacat in Pull Request #3264. Updated by Christian Noon in regards to Issue #1213. Added Tests for upload and download with progress. The dataFileNet and dataFileReadFailed cases to ResponseValidationFailureReason. Several internal SessionManager links that
were broken in the README. Fixed Build issue with Manager class due to cherry picked change that merged incorrectly. (Resolved): 9/1/17 in Xcode 9 beta 6. 3.1.3 Released on 2015-11-22. Updated All logic to compile against Swift 2.0. Updated by Christian Noon. TaskDelegate data and error properties to a public ACL. Fixed by Julien Colin in Pull
Request #1532. URLSessionTaskMetrics are never gathered. Fixed by Jon Shier in Pull Request #2931. Added Docstrings and a note to the README about resumeData and background session behavior. 4.0.0-beta.1 Released on
2016-08-28. Removed The tearDown method in the AlamofireDownloadResponseTestCase. Updated by Christian Noon in Pull Request #2803. The User-Agent header to include version and build numbers
Fixed by Aaron Brager in Pull Request #416. Fixed by William Entriken in Pull Request #2179. Public docstrings for all public SessionDelegate methods. 5.0.0-beta.1 Released on 2018-12-06. All logic to use the latest Swift 2.0 conventions. The Travis-CI yaml file to run watchOS and tvOS builds and tests on
xcode 7.1 osx_image. Updated by Raphael Oliveira in Pull Request #1257. Fixed by Christian Noon in Pull Request #1252. Issue where taskDidComplete override and customization API. Typo in the Travis YAML file that was causing all
tests to always fail on iOS 9.1. Race condition in the cache tests that was causing random failures on Travis-CI. Updated The RequestRetrier example in the README to safely extract tokens. Upgrade Notes This release requires Xcode 7.3+ otherwise the Swift 2.2 changes will NOT COMPILE. Override for NSMutableURLRequest for the
URLRequestConvertible protocol. httpHeaders extensions on URLRequest, HTTPURLResponse, and URLSessionConfiguration to be headers instead. Updated by Christian Noon in Pull Request #2704. Compiler issues
in RequestAdapter and RequestRetrier examples in README. Added by Christian Noon in Pull Request #659. Updated URLProtocol tests to demonstrate using NSURLProtocol tests and NSURLP
using this filter. Updated by Christian Noon in Pull Request #2803. Compiler issue with DownloadRequest in AF4 Migration Guide. Updated by Christian Noon in Pull Request #3478. URLConvertible compiler issue
in the README example. The Travis CI builds to run a full pod lib lint pass on the source. 1.1.2 Released on 2014-12-21. Header example in the README to use Accept header instead of Content-Type. Updated by Stéphane Copin in Pull Request #2488. Two serialization failure reasons to support download response serializers. Added The
OS_ACTIVITY_MODE environment variable to iOS, tvOS and iOS Example. Fixed by Nate Cook in Pull Request #420. The iOS 8.4 simulator to the Travis CI builds by switching to the Xcode 6.4 build. Fixed DownloadRequest sample code issue in AF 4 migration guide. Tests verifying configuration headers are sent with all configuration types. Added by
ullstrm in Pull Request #2851. Updated by Christian Noon in Pull Request #456. Safeguards to url parameter encoding when extracting the url request's url. 3.1.1 Released on 2020-10-17. EventMonitor protocol, to tap in to internal Alamofire lifetime events. Fixed
by Jon Shier in Pull Request #3127. 5.0.0-beta.5 Released on 2019-04-12. SessionDelegate willPerformHTTPRedirection method to accept optional return type from override closure. Fixed by Christian Noon in Pull Request #317. Result tests pushing code coverage for Result enum to 100%. Fixed Linking on some Apple OS versions when using Swift
Package Manager. Updated Swift version required to build [Experimental] Swift Concurrency support to 5.6.0 to avoid various Apple bugs with Xcode 13.2.1. Support now requires Xcode 13.3.1. Updated by Jon Shier in Pull Request #3590. Updated by Christian Noon in regards to Issue #1544. Added Added Cleanup Whitespace target to
remove excess whitespace from Swift files. 3.0.1 Released on 2015-10-19. CocoaPods is a dependency manager for Cocoa projects. Support for uploading MultipartFormData in-memory and streaming from disk. GitHub Sponsors support. Updated by Jonathan in Pull Request #2928. Muir V in Pull Request #724. The error code in the custom response
serializers section of the README. Updated by Samuel E. Added Contributing Guidelines document to the project. Fixed by Jon Shier in Pull Request #3259. Updated progress code samples in the README to show how to call onto the main queue. Updated by Samuel E. Added Contributing Guidelines document to the project. Fixed by Jon Shier in Pull Request
#1734. Fixed by Christian Noon in Pull Request #257. A broken reference link in the README. Updated by Christian Noon in Pull Request #889. Asynchronous request creation. The Generic Response Object Serialization section of the README to use protocol extension. Updated by Christian Noon in Pull Request #889.
Pull Request #2771. Multipart body stream length handling to better handle partial streams. Server trust host validation over to use SSL policy evaluation. Support for Brotli Content-Encoding in Alamofire's default headers. Fixed by Jon Shier in Pull Request #2771. Multipart body stream length handling to better handle partial streams. Server trust host validation over to use SSL policy evaluation. Support for Brotli Content-Encoding in Alamofire's default headers. Fixed by Jon Shier in Pull Request #2771. Multipart body stream length handling to better handle partial streams.
unwrapped. The Hashable implementation on Request to use new hash(into:) API. Added by philtre in Pull Request #2893. That would mean we'd already be running on Alamofire 10.x. Incrementing MAJOR versions this quickly is disruptive to the community and would cause even more confusion. Expanded the Component Libraries section and
moved it up in the README. Added by Jon Shier in Pull Request #3094. The MultipartFormData encoding to leverage Swift 2.0 error handling. Updated by Jon Shier in Pull Request #3062. Updated The INFOPLIST_FILE Xcode project
setting to be a relative path. Handling of os_unfair_lock to prevent rare crash. Alamofire is released under the MIT license. Fixed by Gregory J.H. Rho in Pull Request #1802. 4.9.1 Released on 2019-10-26. Expectation
order issue in the redirect tests. Result failure case to store an ErrorType instead of NSError. Added by Jon Shier in Pull Request #3343. Fixed by Joshua Hudson in Pull Request #3343.
Nuñez in Pull Request #891. 3.0.0-beta.3 Released on 2015-09-27. Request, UploadRequest, and DownloadRequest to longer be open, as Alamofire does not support subclassing these types. DataPreprocessor protocol and implementations, allowing the preprocessing of data before serialization. SessionDelegate initializer and replaced
with default property value. Issue in the "Modifying the Session Configuration" example code of the README where the defaultHTTPHeaders property was called incorrectly. RetryPolicy to allow subclasses to override retry(_:, for: Session, dueTo:, completion:). Issue where multipart form data encoding was unnecessarily scheduling input and output
streams with the current runloop. The Travis CI yaml file to support both Xcode 7.3 and 8 simultaneously. Stream method on Request to receive data incrementally from data responses. Updated by Jon Shier in Pull Request #2895. A macOS disclaimer to download request example in README. Fixed Issue where Requests with invalid credentials
were not terminating with 401 status code. Fixed Thread-safety issue with serialization queue usage. Added by Christian Noon in Pull Request #1457. Fixed by Christian Noon in Pull Request #1785. Our decision to bump the MINOR version was not only due to strictly following semver, but also because it's difficult and undesirable for all OSS
libraries to bump MAJOR versions each time the Swift APIs are incremented. Fixed by Mattt Thompson in regards to Issue #226. Updated Required Xcode version to Xcode to 6.3 in the README. Updated SPM package file to exclude tests since current configuration
complete code coverage. Optional cookie entry in cURL output. Updated SessionDelegate override closure properties to match the method signatures. The travis yaml file for Xcode 8. Fixed by Jon Shier in Pull Request #3214. 3.1.2 Released on 2015-11-06. Fixed by Christian Noon in regards to Issue
#1512. Added by Jon Shier in Pull Request #2639. Fixed Broken CocoaDocs generation by moving iOS Example project into Examples folder. Alamofire Network activity indicator on iOS using Alamofire. Added override closures for all SessionDelegate APIs with completion handlers. Fixed Broken CocoaDocs generation by moving iOS Example project into Examples folder.
by hyotak.yun in Pull Request #3318. README for Swift 3 and Alamofire 4 along with reorganization. Fixed by Jon Shier in Pull Request #2836. Fixed Issue in JSON response serialization test case where the wrong serializer was being tested. Code coverage generation by default to improve test suite stability. Added Redirect tests for the
SessionDelegate. The debugPrintable implementation of Request to use curl -v instead of curl -i to be more verbose. Removed ReleaseTest configuration and updated Travis-CI yaml file to enable testability directly. The documentation for the URLRequestConvertible section in the README. All responses will now start with an AFError Failure type
Added by Christian Noon in regards to Issue #876. Updated by Christian Noon in regards to Issue #1032 and #1049. Escaping for quotes to support JSON in cURL commands. The download method on Manager to use Request. Download FileDestination typealias. Fixed Issue where the network reachability listener closure was not being called
immediately when launching an app in airplane mode. The request and download APIs now default to .get method and upload defaults to .post. Copyright headers to include 2016! Updated by Christian Noon. Added an Adapting and Retrying Requests section to the README. The Carthage/Build ignore flag to the .gitignore file. Added by Jon Shier in
Pull Request #3137. New backgroundCompletionHandler property to the Manager called when the session background tasks finish. We also realize that this can be frustrating for those out there not ready to upgrade to Xcode 7.3. Please know that we consider each release version carefully before deploying. A new Timeline section to the README.
Updated by Jon Shier in Pull Request #1401. Test for question marks in url encoded query. User defined BITCODE_GENERATION_MODE setting for Carthage builds. [x] Download File using Request or Resume Data [x] Authentication with nurl encoded query.
URLCredential [x] HTTP Response Validation [x] Upload and Download Progress (x] CURL Command Output [x] Dynamically Adapt and Retry Requests [x] TLS Certificate and Public Key Pinning [x] Network Reachability [x] Comprehensive Unit and Integration Test Coverage [x] Complete Documentation In order to keep
Alamofire focused specifically on core networking implementations, additional component libraries have been created by the Alamofire ecosystem. Added by Jon Shier in Pull Request #3486. Added Tests for the SessionDelegate redirect with completion override closure. Typo in
the basic auth headers example code in the README. The BITCODE GENERATION MODE user defined setting to tvOS framework target. Removed The AFNetworking sections from the FAQ in the README. Issues Request where certain lifetime events could be triggered more than once by repeatedly calling resume(), suspend(), or cancel().
CustomStringConvertible and CustomDebugStringConvertible conformance to the Result enumeration. Fixed by Cédric Luthi in Pull Request #1159. Updated by Jon Shier in Pull Request #2473. Fixed Issues in DownloadRequest where some events were being duplicated and some were missing. Updated by Jon Shier in Pull Request #1159. Updated by Jon Shier in Pull Request #2473. Fixed Issues in DownloadRequest where some events were being duplicated and some were missing.
request #1854. 1.2.3 Released on 2015-06-12. Removed by Christian Noon in regards to Issue #672. Updated by Christian Noon in regards to Issue #681. 1.1.3 Released on 2015-01-09. Host manager reachability test to use different hostname to improve test reliability. All tests to be crash safe. Issue where NTLM authentication credentials were not
used for authentication challenges. Updated by Jon Shier in Pull Request #2814. Issue in Session where the delegate precondition would be triggered when running with a swizzled URLSessionDelegate. Updated by Christian Noon in regards to Issue #1742. Updated AlamofireExtension to have public properties and initializer, and conform to
@dynamicMemberLookup. Added by Christian Noon in Pull Request #662. The following radars have some effect on the current implementation of Alamofire. DisabledEvaluator to DisabledEvaluator, deprecating the previous name. The ENABLE_TESTABILITY flag to NO for Release configuration and disabled tests for non-test builds to better
support Carthage. Fixed by Wu Zhong in Pull Request #1844. Test target compiler warning by not requiring app extension APIs only. An OSX cookie check in the CustomDebugStringConvertible conformance of a Request. MultipartFormData to have a mutable boundary. 2.0.1 Released on 2015-09-16. Updated by Giulio in Pull Request #2625.
serializer to respect server provided character encoding with overrideable configuration, default string response serialization to ISO-8859-1, as per the HTTP/1.1 specification. Updated by Christian Noon in Pull Request #400. Missing CustomDebugStringCovertible conformance to DownloadResponse. Updated by Thibault Vlacich in Pull Request
#1534. ATS section to the README explaining how to configure the settings. Updated by Timur Yusipov in Pull Request #3518. The URLStringCovertible by renaming to URLConvertible and removed protocol property. Fixed by Wolfgang Lutz in Pull Request
Released on 2016-10-01. We want to address every possible issue prior to the official Alamofire 4.0.0 release. All README code samples to match the latest Swift 2.0 API changes. Fixed by Jon Shier in Pull Request #2885. The SesionDelegate to no longer be final to allow subclassing. Issue where internal quotes were not escaped correctly in cURL
output. Fixed by Yu Ao and Jon Shier in Pull Requests #3380 and #3420. Complete safeguards to URLStringConvertible, URLRequestConvertible and Request #2891. Small grammatical error in the
Parameter Encoding section of the README. Updated by Michael Latta in Pull Request #273. It does not matter whether you choose from, but it does matter whether you choose from bottom Alamofire. Transework. URL encoding internals to leverage the dictionary keys lazy evaluation. You can follow them on Twitter at
@AlamofireSF for project updates and releases. Updated by Christian Noon in Pull Request #506. 5.0.0-rc.1 Released on 2019-09-04. Extra response Phongpattranont in Pull Request #404. The background session section of the
README to use non-deprecated API. Swift 3.2+ API warnings for substring APIs. Fixed by Sebastian Limbach in Pull Request #2240. Notifications to use nested structs inside Notification. Name namespace. Fixed by Sebastian Limbach in Pull Request #2240. Notifications to use nested structs inside Notification.
10, watchOS < 3. DownloadOptions option set to make moving files more robust. Added Support for controlling redirect behavior per Session and per Request #1504. Updated by Christian Noon in Pull Request #1864 in regards
to Issue #1853. A new initializer to the Manager allowing dependency injection of the underlying NSURLSession. Updated by Ernesto Rivera in Pull Request #3342. 3.1.0 Released on 2015-10-22. The HTTP method to the data and download response debug descriptions. Updated All internal Result usage
to use the fully qualified type instead of AFResult. Updated Advanced Usage documentation for Alamofire 5. Updated The CocoaPods installation instructions in the README. Fixed by Mattt Thompson in regards to Issue #206. rdar://26761490 - Swift string interpolation causing memory leak with common usage. The NSURLSessionConfiguration
headers to cURL representation. Fixed 5.5.0 Released on 2021-12-13. Fixed Typo in a parameter name in the MultipartFormData Swift 3 API refactor. Issue in the SessionDelegate where the DataTaskDelegate was not being called. In the tab bar at the top of that window, open the "General" panel. Fixed Out-of-memory exception by replacing
stringByAddingPercentEncodingWithAllowedCharacters with CFURLCreateStringByAddingPercentEscapes. Alamofire is owned and maintained by Jon Shier in Pull Request #3321. Fixed by Jonah in
 by removing the dynamic behavior. Fixed by sudo.park in Pull Request #3306. Issue where the example app was printing elapsed time in optional form. The testDownloadRequest in DownloadRequest in DownloadRequest time in optional form. The testDownloadRequest in DownloadRequest where the example app was printing elapsed time in optional form. The testDownloadRequest in DownloadRequest in DownloadRequest in DownloadRequest in DownloadRequest in DownloadRequest in DownloadRequest where the example app was printing elapsed time in optional form.
Manager. SessionDelegate header documentation for method override properties. Updated The RequestRetrier protocol to take a RetryResult in the completion closure allowing custom retry errors to be thrown. .indexInBrackets options
for array encoding in query parameters. Updated by Christian Noon in regards to Issue #1100. Added by Christian Noon in Pull Request #3308. Updated by Jon Shier in Pull Request #3538. TaskDelegate to only set qualityOfService for NSOperationQueue on
iOS 8+. SwiftFormat configuration and updated styling. Added by Christian Noon in Pull Request #2704 in regards to Issue #2241. Fixed by Jon Shier in Pull Request #3077. The AF4 Migration Guide to no longer use DispatchQueue internal APIs in the example. Rare scenario where finish() could be called multiple times, leading to duplicate
response handler calls. Updated The switch and DispatchQueue logic throughout codebase to simplify usage patterns. Added macOS(Catalyst) User-Agent string. Issue where incorrect dash in License file was breaking markdown parsing. Updated by Alexander Strakovich in Pull Request #318. The Travis CI config to work with Xcode 9 beta 6. If
anyone has additional questions, please feel free to open an issue and we'll be more than happy to discuss further. Internal URLRequest validation and error. Fixed The response Serialization with response Decodable. Updated
StringResponseSerializer implementation to build with the latest Swift toolchain. Travis-CI test suite to run all tests in both debug and release. Updated by Christian Noon in Pull Request #1054. Deprecated responseJSON and associated methods, in
preference to response Decodable. Added by Christian Noon in Pull Request #742. Added by Jon Shier in Pull Request #2608. All source code to compile with Xcode 7 beta 6. Xcode 8.1 compiler warnings and project suggestions. HTTPHeaders type and convenience APIs. Added by
Jon Shier in Pull Request #2629. Separate URLSessionTask lifetime events to EventMonitor. Fixed Quote escaping in cURL representation. Customizable empty response handling in response handling in response serializers. Updated by John Gibb in Pull Request #178
Updated ServerTrustEvaluation logic by simplifying public key equality checks for SecKey types. Removed The override for NSMutableURLRequest for the URL request for the URLRequest for the URLRequest for the SessionDelegate.
Please report any crashes to the Swift bug reporter. Updated by Christian Noon in Pull Request #2801. OS versions affected by resume data bug. Alamofire is an HTTP networking library written in Swift. NetworkReachabilityManager to listen for reachability status changes. There are no breaking API changes in the public APIs. Strictly following
semver dictates that this is a MINOR, not MAJOR release. Fixed by Christian Noon in regards to Issue #472. The Response Serialization section of the README to include validation examples. Added by Christian Noon in Pull Request #1625. Issue where download completion could crash on a nil response.
The playground to use the Result type. Added by Niels van Hoorn in Pull Request #167. 3.5.0 Released on 2016-09-07. Added Rdar 26761490 to the list of rdars affecting Alamofire. Documentation for the Printable protocol on Request to reference output stream rather than the specific OutputStreamType. Updated DataResponse and
Download Response debug Description to include more useful information. We'd really appreciate everyone trying out the betas and letting us know if you find issues. Added by Christian Noon in regards to Pull Request #731. Updated Session to more safely target provided custom Dispatch Queues for internal use. Thread-safety issue in Session.
Generic Failure constraint to DataResponse and DownloadResponse, making them DataResponse and DownloadResponse and
Released on 2020-03-23. Travis-CI build issue by adding support for an iOS Example scheme. Added Package Manager (SPM). Added by Christian Noon in Pull Request #1461. Timeline struct to capture timings throughout the lifecycle of a Request. HTTPMethod to be a struct rather than an enum. Added
API to cancel DownloadRequests without producing resume data. The ParameterEncoding encode API to throw instead of returning tuple. Added by Christian Noon in Pull Request #581. Added by Christian Noon in Pull Request #581. Added by Christian Noon in Pull Request #581.
wildcard validation that contains response with nil MIME type. Fixed by Jon Shier in Pull Request #2699. Updated by Julien Ducret in Pull Request, DownloadRequest, UploadRequest, UploadRequest and StreamRequest and StreamRequest and StreamRequest and StreamRequest and StreamRequest #2699. Updated by Julien Ducret in Pull Request
#716. optional. All tests to follow the Given / When / Then structure. Fixed by Sebastian in Pull Request #2952. Encoding of Decimal values in URLEncodedFormEncoder. 5.0.4 Released on 2020-03-15. Internals by replacing syncResult extension with DispatchQueue sync. Potential crash cases in Validation MIME type logic exposed by chaining.
Added Support for 204 response status codes in the test suite related to Xcode 8.3. Fixed by Jon Shier in Pull Request #2057. The designated initializer for a Manager to accept a SessionDelegate parameter allowing dependency injection for better background session support. Multipart form data uploads
to now delete temp file if encoding fails. Fixed NetworkReachabilityManager behavior regression from 4.8.1. Fixed by Jon Shier in Pull Request #2797. Added by Jon Shier in Pull Request #3160. Added A new Response struct to simplify
response serialization. Fixed by Philip Heinser in Pull Request #1318. Updated by Jon Shier in Pull Request #1505. 2.0.0-beta.4
Released on 2015-09-06. Deployment targets to iOS 9.0, macOS 10.11, tvOS 9.0 and watchOS 2.0. Updated by Christian Noon. SessionDelegate class to final. Accept-Encoding and Accept-Encodi
Mattt Thompson in regards to Issue #269. 5.0.1 Released on 2020-02-23. Xcode build issues and precompiled binary build issues by removing the dynamic bundle identifier. The Travis CI yaml file to support iOS 8 simulators. Various methods of HTTP authentication may crash, including HTTP Basic and HTTP Digest. Updated by Jon Shier in Pull
Request #3256. Updated by Jonas Schmid in Pull Request #726. SessionManager queues to each have a unique name using a UUID suffix. Whether it is above or below all the other Xcode groups does not matter. Updated by Broccoliii in Pull Request #1226. Updated by Christian Noon in regards to Issue #700. Tests for uploading MultipartFormData
with complete code coverage. Added Request.didSuspendTaskNotification, Request.didCompleteTaskNotification, Request.didCom
string values in Parameter Encoding since they are now implied. Fixed by Jon Shier in Pull Request #2961. Fixed Issue in automatic validation tests where mutable URL request was not used. Click on the + button under the "Embedded Binaries" section. Sponsoring the ASF will enable us to: Pay our yearly legal fees to keep the non-profit in good
status Pay for our mail servers to help us stay on top of all questions and security issues Potentially fund test servers to make it easier for us to test the edge cases Potentially fund developers to work on one of our projects full-time The community adoption of the ASF libraries has been amazing. Added by Christian Noon in Pull Request #795. 3.4.1
Released on 2016-06-12. Updated by Chris Cieslak in Pull Request #1050. Project files and templates for Xcode 12.4 and GitHub templates. Build warnings for deprecated SecTrust API when building for Catalyst. Fixed by Siemen Sikkema in Pull
Request #448. Fixed by Christian Noon in regards to Issue #835. Fixed by Jon Shier in Pull Request #2739. 5.2.1 Released on 2020-05-25. Timeline type, as Alamofire now gathers URLSessionTaskMetrics for every request. Added by Robert in Pull Request #322. A Migration Guides section to the
README with link to 2.0 guide. Added by Tobias Ottenweller in Pull Request #827. iOS Example App to use optional bind around response to safely extract headers. Embedded Framework and Source File documentation
in the README. Updated by Jon Shier in Pull Request #3414. Added by Gwendal Roué in Pull Request #1836. Fixed A TLS evaluation test that could fail with a different error when behind a proxy. All response serializers to now return the original server data as NSData? Basic auth Authorization header example to the
README. DataStreamRequest, for streaming HTTP responses. The data length checks in the responseString serializers. Usage md documentation to be fully up-to-date with Alamofire 5. All issues associated with this milestone can be found using this filter. Fixed Request debug description tests to no longer require parameters in a
specific order. Missing rethrow of error produced when writing temporary multipart files fails. Temporary workaround for SecCertificate array compiler crash. Fixed by Christian Noon in Pull Request #2808. Tests around all response
serializer usage. usage. Added by Arnaldo Capo in Pull request #1905. Added by Peter Sobot in Pull Request #512. Fixed by Raphael R., helloyako, DongHyuk Kim, Bas Broek, Jorge Lucena, MasahitoMizogaki, José Manuel Sánchez, SabinLee, Mat Trudel, Wolfgang Lutz, and Christian Noon in Pull Requests #1995, #1997, #1998, #2022, #2031,
#2035, #2080, #2081, #2092, #2095, #2104. 4.3.0 Released on 2017-01-15. Added by Cédric Luthi in Pull Request #1166. Typo in the HTTP Headers section of the README. Fixed by Martin Kavalar in Pull Request #1141. Result and Error types to refactor
response validation and serialization. The Ono response serializer example for Swift 2.0 in the README. Parameter encoding of HTTPBody from occurring twice. Issue in AF 4 migration guide where supported iOS versions was incorrect. Additional guards to ensure unique task identifiers for upload and download tasks. Unnecessary parentheses from
closure parameters and typealiases. If you have any issues, please don't hesitate to reach out through GitHub or Twitter. Travis-CI settings to only build the master branch. Removed by Christian Noon. Support for Travis-CI settings to only build the master branch. Removed by Christian Noon. Support for Travis-CI settings to only build the master branch.
error if error is nil. Added by Christian Noon in Pull Request #505. Updated by Alexander Ignition in Pull Request #1893. Fixed Compiler errors in the playground due to the new response serializer APIs. 3.0.0-beta.1 Released on 2015-09-21. Removed Travis-CI build status from the README until Xcode 6.3 is supported. Fixed Swift 5 support for
Alamofire Extension. 5.0.0-beta.3 Released on 2019-01-07. Updated by ILI4S K4RIM in Pull Request #707. Code signing on watchOS and tvOS simulators builds to not sign simulator builds. Section to the README about wildcard domain matching with
server trust policies. Updated The response object example to use a failable initializer in the README. Updated by Christian Noon in Pull Request #261. A new syncResult extension to DispatchQueue to simplify thread-safe locking. Added New tvOS framework and test targets to the project. Added by Wataru Suzuki in Pull request #1822. TLS
evaluation tests for revoked certs for no policy and default policy. Fixed by Christian Noon in regards to Issue #728. Alamofire is named after the Alamo Fire flower, a hybrid variant of the Bluebonnet, the official state flower of Texas. Link to Carthage in the README. The podspec to 4.0.0-beta.1 and bumped the deployment targets. Updated by Kyle
Fuller in Pull Request #542. Download request sample to iOS example app. Updated by Nicholas Maccharoli in Pull Request #885. Updated Carthage instructions in the README to clearly callout the carthage update command. Updated The NSURLSessionStream APIs to support tvOS. Fixed Travis-CI scheme issue, added podspec linting and added
ENV variables. Added A new URLEncodedInURL case to the ParameterEncoding for encoding in the URL. Added ReleaseTest configuration to allow running tests against optimized build. Request, UploadRequest, and DownloadRequest with rewritten implementation and API. Fixed Typos in ResultTests. SessionManager to Session, with
rewritten implementation and API. 1.3.0 Released on 2015-07-24. Tests around invalidURL error cases for Request creation and adaptation. Updated by Christian Noon in Pull Request #593. The Manager class to SessionManager to be more descriptive.
Unnecessary responds To Selector overrides for Session Delegate methods. 5.2.0 Released on 2020-05-16. 1.1.1 Released on 2014-11-20. Updated by Jon Shier in Pull Request #379. Compilation issue in response
handler section of the README. Error where wildcard was failing due to missing response MIME type. Fixed by Petr Korolev in Pull Request #361. The delegate guard in the Manager initializer in front of
property assignment. 5.0.0-beta.7 Released on 2019-07-29. Added by Christian Noon in Pull Request #2802. Added by Cédric Luthi in Pull Request #1187. All source, test and example code to
compile against Swift 2.2. Updated by James Barrow and Dominik Hadl in Pull Requests #1030 and #1128. The escape method in Parameter Encoding to use non-deprecated methods. Upgrade Notes This release requires Xcode will NOT
COMPILE. Cookies are now only applied in the DebugPrintable API when appropriate. Added by Christian Noon in Pull Request #889. Compiler issue in the iOS Example App around Result
type usage. Added Podspec argument requires arc to the podspec file. Removed by Mattt Thompson. Spec validation error with CocoaPods 0.36.0.beta-1 by disabling -b flags in cURL debug on OSX. 3.4.0 Released on 2016-05-08. The entire project to use macOS in place of OS X. Removed Ambiguous response serializer methods that collided with
default parameters. Fixed Missing automaticallyCancelling parameter in serializingDownloadedFileURL. Travis-CI yaml file to support iOS 9, OSX 10.11 and Xcode 7. Alamofire is unsupported on these platforms but should build correctly. Fixed by Jon Shier in Pull Request #3322. The cURL example annotation in the README to pick up bash syntax
```

highlighting. 3.1.5 Released on 2016-01-17. More robust redirect tests around default behavior and task override closures. Unstable parameter ordering in URLEncodedFormEncoder. Support for exponential backoff retry policies through the new RetryPolicy and ConnectionLostRetryPolicy types. Added GitHub templates for issues and pull requests. Updated by Ashton Williams in Pull Request #843. Fixed by YeralYamil in Pull Request #590. Support for building on Windows and Linux. Fixed Random deinitialization test failure by handling task state race condition. The dependencies parameter to Package file for SPM since it's now required. Issue in the download example in the README where a to parameter was missing. Updated by Jon Shier in Pull Request #1273. The APPLICATION EXTENSION API ONLY enabled flag to YES in the tvOS framework target. MultipartUpload to no longer be public. Fixed Small typo in the Alamofire 3.0 Migration Guide Response section. Added Tests for data task progress updates. Updated Result type to take two generic parameters (Value and Error) where Error conforms to ErrorType. Deprecated by Jon Shier in Pull Request #3502. Added Support for Xcode 13, including a workaround for Combine compilation on older architectures. Removed by Jon Shier in Pull Request #2265. You can now sponsor Alamofire directly through GitHub. Fixed Issue in TaskDelegate where task access was not thread safe. README with improved Error examples as well as typo and whitespace fixes. All the Core APIs and documentation to match Swift 3 API design guidelines. A section to the README that calls out all open rdars affecting Alamofire. Open up Terminal, cd into your top-level project directory, and run the following command "if" your project is not initialized as a git repository: \$ git init Add Alamofire as a git submodule by running the following command: \$ git submodule by running the following command: \$ git submodule by running the following command: \$ git submodule add Open the new Alamofire as a git submodule by running the following command: \$ git submodule add Open the new Alamofire folder, and drag the Alamofire submodule by running the following command: \$ git submodule add Open the new Alamofire submodule add Open the new Alamofire submodule by running the following command: \$ git submodule add Open the new Alamofire submodule sub where "already" was misspelled. Validation typealias to include temporary and destination URLs in a DownloadRequest type. Various Result methods to be throw/rethrows. Issue where reachability calculation incorrectly reported .reachable status with [.connectionRequired, .isWWAN] combination. Fixed Some casting code logic in the Generic Response Object Serialization example in the README. Updated by Christian Noon in regards to Issue #622. Removed by Avismara in Pull Request #576. All sample code in the README to conform to the Alamofire 3.0 APIs. Updated by Christian Noon. AuthenticationInterceptor, for easier adaptation and retry of requests with credentials. Upgrade Notes There are a couple changes in the 1.3.0 release that are not fully backwards compatible and need to be called out. Updated by Boris Dušek in Pull Request #2346. Fixed by Ah.Miao in Pull Request #291. Documentation to the URLStringConvertible protocol around RFC specs. There are several reasons why this was deployed as a MINOR and not MAJOR release.

Expositions. 5 février 2022 - 5 juin 2022 / Le Château Chefs-d'œuvre de la sculpture du XVIIIe siècle commandés par Louis XV : Zéphyr, Flore et l'Amour, et l'Abondance. Website Hosting. MySite provides free hosting and affordable premium web hosting services to over 100,000 satisfied customers.
