Just a heads up that a .cab file will download when you click on that link. Tried the link earlier, and again now, but I can't the cab to install anything. Tried this process: this one: am getting file not found errors, even though the cab file name and path are correct. I am guessing the file is incorrect or corrupt.CTG Canadian Tech Guy wrote: Tried the link earlier, and again now, but I can't the cab to install anything. Tried this process: And this one: ... I am getting file not found errors, even though the cab file name and path are correct. I am guessing the file is incorrect or corrupt. CTG A .cab file is a compressed archive like a .zip file, if you double-click the .cab file in Windows Explorer it should 'open' the archive and you will see the files it contains, copy these files out of the .cab and into another folder such as on your desktop, then install the driver via Device Manager.Here is a newer version of the AR9285 driver: Yeh I did that (transfer the zipped files) but it still did not work. I will try the CAB file you linked to. Thanks!--CTG HI I have found the wifi driver it will work for both 32 bit and 64 bit find the link below ♦ OK, I got it going. Basically I found the hard of the dead computer the wireless NIC had come from. I put it an enclosure and connected it to the computer I was working on. I did a driver search on that volume. It found it and it worked. Interestingly, it seems to be the base driver I was working with, but with some Dell wrapper on it. Anyhow, it is working. Thanks, all!CTG It won't install on my Asus laptop. It says I have the wrong model computer. Драйвера для адаптеров беспроводной сети Atheros. Подходят для множества моделей и модификаций. Их список вы можете видеть ниже. Доступны драйвера для Windows 7, Vista и XP – выберите драйвер для своей операционной системы. К сожалению, в архиве вы не найдете установочного файла, а лишь CAT и SYS файлы, в которых и содержится драйвер. В данном случае установка производится через встроенный в Windows инструмент поиска и инсталляции драйверов. Открыть его можно так: Для Windows 7:Пуск → Панель управления → Система и безопасность → Администрирование → Управление компьютером → Диспетчер устройств (в левом списке). Теперь найдите в списке ваше устройство беспроводной сети (оно помечено восклицательным знаком), щелкните по нему правой кнопкой мышки и выберите пункт «Свойства». В открывшемся окне перейдите на вкладку «Драйвер» и нажмите на кнопку «Обновить». Перед вами мастер поиска и установки драйверов. Выберите пункт «Выполнить поиск драйверов на этом компьютере» и укажите папку, в которую вы распаковали скачанный архив. Теперь драйвер для беспроводной сети будет установлен. Для Windows XP:Пуск → Панель управления → Администрирование → Управление компьютером → Диспетчер устройств (в левом списке). Далее все действия аналогичны действия для Windows 7.
