Flat racing National Hunt racing If you fancy having a flutter on a horse race but dont know where to betIn order to place a bet you need to find a bookmaker either online or via a bookmaker shop. It is important that you use a reputable, reliable company. Good
examples are Bet365, Betfair, Paddy Power, BetVictor and Coral. Get 10 in FREE betsWant to place a bet? Sign up to Betway and receive a 10 welcome bet. View Deal How betting exchanges they are usually expressed in decimal form. If a horses odds are 2/1 this
means that if you bet 1, you make 2 profit you get 3 back as you also get your bet, or stake as it is known, back. Decimal odds specify how much you will get back from the bookmaker based on a 1 bet including your stake, while the fractional odds say what profit you will make. Not all
odds are described as something to one. If a horse is priced at 5/2 it means if you bet 2, you make a profit of 5, plus your stake. If a horse is a strong favourite to win a race it will sometimes be odds-on. As you look at the odds, this means that the number on the top/left (your profit).
For example, if a horse starts a race at 1/10, it means if you bet 10 you would have got 11 back, a profit of just 1. As 1/10 is odds-on it will sometimes also be written, and particularly spoken, as 10/1 on (10-to-one on). Different types of betWin betThis is one bet that you place on a horse for it to win. Each wayThis is a bet that you place on a horse for it
to either win or be placed. The place terms vary according to the type of race and number of horses in it, although its normally for your horse to finish in the top three. The place portion of your bet pays out at a fraction of the main odds and again this varies but is usually 1/4. So, if you have a 10 each way bet on a horse at 4/1 that will cost you 20,
with 10 on the win and 10 on the place part of the bet. If it wins both bets win, so you get 10 x 4 = 40, plus your 10 stake of 10 so 20 in total. Overall you get 70 for a profit of 50. If the horse finished second, third or fourth you would
lose your 10 win bet but make 10 profit from the each way win to leave you level overall. Each way bets are usually only used on horses at relatively long odds as otherwise you can still end up losing overall if your pick doesnt win but only places. Multiple bets There are numerous different types of multiple bet. A double involves backing two separate
events, for example one horse to win the 1pm at Cheltenham (hypothetically at 2/1) and another horse to win the 4pm at Newbury (at evens). Both bets must win for you to succeed. A 1 double would cost you 1 and if both horses deliver you would get 6 back. After the first horse wins you effectively have 3 (1 stake plus 2 profit) on the second horse at
evens, resulting in a payout of 6 and profit of 5.A treble is the same concept but with three selections. As well as being called multiple bets, these are also known as accumulators. In addition to these simple multiple selections (for example a Yankee has four) and you cover the
various doubles, trebles and, in this case, a fourfold. A Yankee is 11 bets in total: six doubles, four trebles and one fourfold. You need at least two picks to win to get anything back and as it is 11 bets, a 1 Yankee would cost 11. Straight forecast This requires you to pick the top two horses in a race, in the correct finishing order. Reverse forecast Similar
to a straight forecast but the horses can finish in any order. Tricast This is where you pick the top three horses in the correct order. Get 10 in FREE betsReady to place a bet? access now Thursday 22nd February 2024 Horse racing is one of the most popular spectator sports in the UK, with millions of fans enjoying a day at the races each year. Of the latest count, there are 59 recourses in the country, according to the British Horseracing Authority, while betting on horse racetracks is valued at GBP3 billion as of March
2022. For those new to horse racing, all the different types of bets and complicated betting to help you understand this exciting sport. 1. Expanding Your Learning Through Online Resources In this digital age, there are many excellent online
resources for expanding your understanding of horse racing odds and further analysing a runners winning probability. a. Horseracing Sites Horseracing Sites Horseracing sites like Fanodds.com provide extensive information guides with detailed statistics, analysis and insights you can use to assess chances. These have far more information than on-course racecards.
These channels also have digital forms and odds comparison information, allowing you to easily compare the latest odds from all major bookmakers on one site. Identifying odds movements and discrepancies between bookies is very valuable. Most sites also let you watch past race replays to review performances. By rewatching previous runs yourself
and comparing factors like pace, distances and sectionals to the final odds and results, youll advance your understanding. b. Betting Forums Participate in vibrant horse racing communities to exchange thoughts and get tips. Social media platforms have communities like Fan Odds Facebook to help you interpret odds from experienced racegoers and
professional gamblers c. Champion Tipsters Many top professional tipsters offer online columns sharing expert betting advice and assessing racing odds for subscribers. Signing up can rapidly boost your own analysis skills. With these online learning resources, you can constantly build up your own horse racing knowledge. As you gain more
experience, your ability to independently interpret odds and identify potential betting opportunities will improve greatly. 2. Understanding Fractional Odds. These quote the profit you would make on a 1 bet. For example, odds of 2/1 mean that for every 1 you bet, you will receive 2
profit. Your total return would be 3 (2 profit plus your 1 stake). Fractional odds only account for profits against your stake, not the return of your original stake as well. The lower the first number, the more likely that horse is expected to win. Even money odds of 1/1 indicate the horse has an equal chance. Odds like 10/1 suggest an outsider with only
a small chance of winning. Odds of 50/1 or greater are very unlikely winners. Assessing and comparing these probabilities across all runners is key to betting strategyhelping you prepare effectively before a major horse racing event. 3. Understanding the Favourites Before each race, bookmakers produce odds representing the probability of each
horse winning. The horse with the lowest (shortest) odds is deemed the bookies favourite, as they believe it has the best chance. Beginners often bet on the runner most likely to win in each race. While the top runners have an implied higher probability, many races have surprises and upsets. Spreading your bets across multiple runners can improve
your chances. 4. Getting To Grips With The Form Form refers to each horses recent record of results and performances in previous races. Studying the form can uncover promising runners with better chances than the favourites. Useful information in the form includes: Recent finishes: Horses that finished first, second or third during the last race are
likely to perform just as well in the upcoming race. Also, check if they placed multiple times in recent runs. Winning distances: Winning by larger distances shows impressive performances. Dominant wins may indicate better class. Ground/distance suitability: Some horses perform better at certain courses or on grass, all-weather and firm or soft
ground. Jockey bookings: Top jockeys can significantly impact results. Check if positive jockey switches have been made. Trainer record: Trainers have varying expertise levels with different horse types. Weight carried: Higher weights can hamper chances. By judging aspects like these against each runner, you can spot potential each-way or upset
bets with longer odds. You can rate aspects like these for each runner and compare scores to determine picks with potential, value odds and solid reasoning. 5. Analysing Track Conditions on the day. Softer ground (good to soft/heavy) tends to disadvantage front running early pace
horses. Meanwhile, firmer ground runners can demonstrate their optimal form on good/good to firm ground. This going variance swing of a few seconds per furlong can significantly alter the odds between runners. Other factors like headwinds and rain throughout a race can also impact closing sectionals. They may affect late-running hold-up horses
that prefer easing conditions. Considering how suitable each horse is for the expected and unfolding conditions is important. Conclusion While horse racing betting has complicated aspects, by grasping the fundamentals of odds, common bets, assessing runners and understanding conditions, beginners can feel more confident studying races and
placing smarter bets. The key is examining the race card details before determining your betting strategy. Over time, your knowledge of interpreting factors like odds, form and conditions, and weighing your options will improve an excellent skill in this fascinating sport of kings! Photo Healy RacingThe exhilaration of watching horse racing is often
difficult to beat. To help you make the very most of your day, whether its at the track or watching it on TV or online, heres a simple guide to understanding betting odds found on a host of betting sites. The odds in horse racing tell you how likely an event is to happen, and how much you can expect to receive from a successful bet. With time and a little
experience, betting odds like 17/2 will become second nature to you. Betting terminology along with understanding types of bets are a good place to start. How do Betting Odds WorkBy understanding how betting odds work, you can quickly compare horses to see which has the best chance of winning. For example a horse with odds of 2/1 is deemed to
have a much better chance of winning than a horse with odds of 100/1, although it is important to bear in mind that this information is subjective. Odds are displayed by bookmakers in two ways, in fractions and in decimals. Boyle Sports Daily Price Boost for Cheltenham Boyle Sports Daily Price Boost for Cheltenham OfferHow do Fractional Odds WorkFractional
odds can seem complex to begin with but in reality are quite straightforward, and are the most popular way for bookmakers to display their horse is 5/1 then for every 2 wagered you will receive a 13 profit. If a horse is 5/1 then for every 2 wagered you will receive a 13 profit. If a horse is 5/1 then for every 2 wagered you will receive a 13 profit. If a horse is 5/1 then for every 2 wagered you will receive a 13 profit. If a horse is 5/1 then for every 2 wagered you will receive a 13 profit. If a horse is 5/1 then for every 2 wagered you will receive a 13 profit. If a horse is 5/1 then for every 2 wagered you will receive a 13 profit. If a horse is 5/1 then for every 2 wagered you will receive a 13 profit. If a horse is 5/1 then for every 2 wagered you will receive a 13 profit. If a horse is 5/1 then for every 2 wagered you will receive a 13 profit. If a horse is 5/1 then for every 2 wagered you will receive a 13 profit. If a horse is 5/1 then for every 2 wagered you will receive a 13 profit. If a horse is 5/1 then for every 2 wagered you will receive a 13 profit. If a horse is 5/1 then for every 2 wagered you will receive a 13 profit. If a horse is 5/1 then for every 2 wagered you will receive a 13 profit. If a horse is 5/1 then for every 2 wagered you will receive a 13 profit. If a horse is 5/1 then for every 2 wagered you will receive a 13 profit. If a horse is 5/1 then for every 2 wagered you will receive a 13 profit. If a horse is 5/1 then for every 2 wagered you will receive a 13 profit. If a horse is 5/1 then for every 2 wagered you will receive a 13 profit. If a horse is 5/1 then for every 2 wagered you will receive a 13 profit. If a horse is 5/1 then for every 2 wagered you will receive a 13 profit. If a horse is 5/1 then for every 2 wagered you will receive a 13 profit. If a horse is 5/1 then for every 2 wagered you will receive a 13 profit. If a horse is 5/1 then for every 2 wagered you will receive a 13 profit. If a horse is 5/1 then for every 2 wagered you will receive a 13 profit. If a horse is 
is 10/11 then for every 11 wagered you will receive a 10 profit. In the final example above, when the right-hand number, this is known as odds-on and is a riskier bet. You may also hear the term Evens thrown around, this is when a horse is 1/1, so for every 5 you stake, you will receive 5 in profit. Don't have a betting
account yet? Find a list with all bookmakers reviewed by our experts, that offer the latest free bets here. How do Decimal Odds WorkDecimal betting odds are synonymous with exchanges such as Betfair and in some ways are easier to work with if you are new to betting. Your stake is included in the decimal odds so the simple way to calculate your
total return is:Decimal odd number x stakeFor example, if the decimal odds for your horse is 5.0 and you stake 10 to win you will receive 5 x 10 which is 50.If a horse is evens, again the stake is included and the decimal odds for your horse will give
you the option to display odds as fractions or decimals. If you are at the races however, and wish to convert a bookmakers fractional odds to decimals then you can use the following calculation: To convert odds displayed as 5/1 you divide 5 by 1 and add 1:5/1 = 5 + 1 = 6.0Shorter odds of 6/4:6/4 = 1.5 + 1 = 2.5Betting ExampleOne of the most fun
parts of attending the races is choosing your selection in the parade ring and placing a bet on your horse. Betting adds to the fun, interest and intrigue around a horse race. Here is an example a horse whose odds are 10/1You have 10 to stake on the race and place your bet at 10/1. If your horse wins the race, your winnings
will be 10 x 10 = 100 plus your stake so your total return is 110. The same horse would be displayed as 11.0 in decimal odds. If you place 10 at these odds, you simply calculate: 10 x 11 = 110 you can also use our bet calculator if you need help with different types of bets. horse as the key.Note: This article was first published in March 2019 and has been updated.#TheAction: Speed Figures from America's Best Racing on Vimeo.Horse racing betting can be exciting but it can also be confusing if youre new. Terms like 9/5 odds or 7/2 odds can feel like a different language. Dont worry, well break it all down in simple
terms so you can feel confident placing your first bet at one of the top horse betting sites online. Horse racing odds show you how much money youll win if your bet comes in. But they also tell you how likely the horse is to winaccording to the betting market. Odds come in fractional format (e.g. 5/2 or 9/5) or decimal format (e.g. 3.50). In the UK and
US, fractional odds are most common at the track. Heres a quick horse racing odds chart showing what you win from a 10 bet (or $10):Odds (Fractional) Profit on 10 BetTotal Return1/1 (Evens) 10205/225359/518287/235459/2455510/1100110Tip: Multiply the second number by your bet to calculate profit. Then add your stake to get your total return
These odds you can see on the popular sites and racing apps in the UK like MrPlay, bet365, Betvictor, betfred and 10bet.9/5 odds mean for every 5 you bet, you win 9 profit. If you stake 10, youd make 18 profit and get 28 back in total. So if you back a horse at 9/5 and it wins: Bet: 10 Profit: 18 Total Return: 28 See also The Horse Racing League Betting
Guide 9/2 odds mean you win 9 for every 2 bet. A 10 bet at 9/2 gets you: Profit: 45Total Return: 55Its a slightly longer shot than 7/2, so your payout is higher if the horse wins.5/2 odds mean for every 2 you bet, you win 5 profit. A 10 bet gives you: Profit: 25Total Return: 35Horses priced at 5/2 are usually considered strong contenders.7/2 odds translated at 5/2 are usually considered strong contenders.7/2 odds translated at 5/2 are usually considered strong contenders.7/2 odds translated at 5/2 are usually considered strong contenders.7/2 odds translated at 5/2 are usually considered strong contenders.7/2 odds translated at 5/2 are usually considered strong contenders.7/2 odds translated at 5/2 are usually considered strong contenders.7/2 odds translated at 5/2 are usually considered strong contenders.7/2 odds translated at 5/2 are usually considered strong contenders.7/2 odds translated at 5/2 are usually considered at 5/2 are usually considered strong contenders.7/2 odds translated at 5/2 are usually considered at 5/2 are usually consi
to 7 profit for every 2 staked. A 10 bet at 7/2 would give:Profit: 35Total Return: 45Still not a favourite, but not a huge outsider eitherwhat youd call a mid-range pick. Horse racing odds are determined by:Bookmakers analysis: past performance, jockey, trainer, distance, track conditions. Public betting: as more money is placed on a horse, its odds
shorten (drop). Starting price (SP): the odds at post time are known as the official SP. So odds can change right up until the race starts. Best odds depend on your strategy: Lower odds (like 2/1 or even 6/4): safer bets, but smaller payouts, Higher odds (like 2/1 or even 6/4): safer bets, but smaller payouts, but more risk. Each-way betting is popular on longshots, as it pays
returns, and understand the risk before you place a bet. And remember, odds = probability + payout. Use that to your advantage. They show how much you win compared to your stake. Example: 5/2 = 2.5 + 1 = 3.5 (decimal odds). A horse with high
oddslike 20/1 or 33/1. Less likely to win, but pays big if it does. Yes. Odds shift as more bets are placed and new info comes in (like a jockey change or rain). For more info on horse betting, visit our Guides and explore bonus bets you can claim in the UK. You may have gone onto a betting site and seen odds of 3.0 and you may have thought this meant
shown like 3.00, 4.50, 2.75 and so on. There is only one thing to remember with decimal odds and it is this. The figure shown is the sum total of what you will return. This is different to what the actual odds are, let us explain. In fractional odds of say 2-1, if you place a 10 bet then you will return 30 as you will also get your 10 staken
back. All winning bets return stake and it is the same with decimal odds. So if you see odds of say 3.0 then if you bet 10 then you will return 30 but only 20 of that are actual winnings, the other 10 is your stake. So now we can see that odds of 2-1 in fractional odds and 3.0 in decimal odds are in fact the same thing. Skip to content Home>Betting

truth, the majority of casual horse racing bettors dont always understand the odds and what they might get back from their bets. To be fair, the amount of figures and terminology in horse racing is enough to scare anybody off. From novice to experienced bettors, knowing what odds youre using and how that determines what you might win is
important and can influence what you choose to bet on. Have you ever just placed a bet blindly, not noticed the odds and kept your fingers crossed? Thats not a problem, we wont judge you. This article will help you to understand the odds and kept your fingers crossed? Thats not a problem, we wont judge you. This article will help you to understand the odds and how they relate to any potential winnings. Youll also see examples of how returns are calculated and be given
some tools to help you along your betting journey. Understanding Odds In Horse Racing Given that odds are the key to what winning returns are paid out, lets take a look at those before we get into the calculation side of things. As you may be aware, betting odds are in place to give an indication of what the betting markets think is likely to win a race
The lower the odds, its predicted that the horse has a higher chance of winning the race. You should always bear in mind that not only do bookies make mistakes, but they also include a house edge in their odds offerings. This can sometimes lead to the odds on offer not actually being a true representation of a horse's chances of winning. Horse racing
change from against to odds on and will look like 1/2. This time, for each 2 you bet, you can win 1. Numerator - The first number provides the amount of stake required. For example, if we used our example of 6/1 with a 10 stake: Total Returns = 60 + 10 (stake) = 70 Decimal
OddsDecimal odds are mainly used in European betting markets. Using decimal odds so 6/1 is 7.0 in decimal odds so 6/1 is 7.0 in decimal odds are mainly used in European betting markets. Using decimal odds so 6/1 is 7.0 in decimal odds so 6/1 is 7.0 in decimal odds. This is a basic explanation and the actual equation to convert fractional to decimal odds so 6/1 is 7.0 in decimal odds.
odds. Moneyline odds are displayed as a + or - and are based on a $100 stake. + odds are the equivalent of odds on. For example: A horse with +300 odds = $100 stake +100 = $400 returns A Horse with +300 odds = $100 stake +100 = $400 returns A Horse with +300 odds = $100 stake +100 = $400 returns A Horse with +300 odds = $100 stake +100 = $400 returns A Horse with +300 odds = $100 stake +100 = $400 returns A Horse with +300 odds = $100 stake +100 = $400 returns A Horse with +300 odds = $100 stake +100 = $400 returns A Horse with +300 odds = $100 stake +100 = $400 returns A Horse with +300 odds = $100 stake +100 = $400 returns A Horse with +300 odds = $100 stake +100 = $400 returns A Horse with +300 odds = $100 stake +100 stake +1
we get to the nitty gritty of the subject.calculating horse racing bet payouts. During this section well cover off the different types of horse racing bets and how to calculate them. Because theres so many different types of horse racing bets and how to calculate them. Because theres so many different types of horse racing bets and how to calculate them.
work for you. For those mathematicians amongst you that just love calculations, youll also get details of how to manually calculate the horse bet payouts. Calculating Single BetsWith single bets or win bets as they are also known, youre betting purely on one outcome, the horse winning the race. The returns are based on the odds being multiplied by
the stake. These are by far the easiest of all bets to calculate the payouts on. Example: Your horse wins at odds of 7.0 (6/1) with a stake = 60 profitPlace BetsAnother form of single bet is a place bet. The bookies have a place market and the amount of places available for bets will depend on the amount of
runners. Heres an example of the places market on Bet365: As this is still a single bet, the mechanics of payouts remains the same as a single bet, but this time youre picking a horse from two races to create a double bet. The returns are calculated
differently for a double bet. This time, the odds of each horse are multiplied to provide total odds. The total odds are then multiplied by the stake. Heres a real life example for two horses running in two races at Huntingdon Races. We have chosen Sangiovese at odds of 5.0 (4/1) and Cloudy Wednesday at odds of 6.5 (11/2) with a total stake of 10. As
mentioned, the odds are multiplied in a double bet. So if both were to win their races, what would the returns look like: Sangiovese: 5.0 (odds) x Cloudy Wednesday: 6.5 (odds) = 325 returns 25 returns 26 returns 27 returns 27 returns 28 retur
you can still use the Double Bet Calculator for convenience. PLEASE NOTE - Treble bets work in exactly the same way as double bets. You multiply the odds of each by each other to get the total odds. Calculating Each Way BetsEach way bets are effectively two bets are effe
half betting on the horse to place. Just to contradict what we said earlier, its actually easier to use the fractional odds when calculation: So, you can see from
this example that Bet365 are offering each way terms of 3 places at 1/5 of the odds. Once you place this bet, theres three possible outcomes: Corra Bheinn WinsWin part: 10 (stake) x 10/1 (11.0) (odds) = 110 returnsPlace part: 10 x 2 (1/5 of 10/1) = 30 returnsTotal returns: 110 + 30 = 140 less 20 stake = 120 profitCorra Bheinn finishes second or
thirdPlace part: 10 x 2 (1/5 of 10/1) = 30 returnsTotal returns: 30 less the original stake of 20 = 10 profitCorra Bheinn doesnt win or placeYou lose the bet and your 20 stakeCalculating Multiple BetsTheres a crazy amount of horse racing bets for punters these days with some more complicated than others. As we move on to multiple types of bets,
were stepping up another level. Heres a list of most of the multiple bets that are available on horse racing: Round RobinIn addition to these bets, most of them can be done each way up to 247 combinations. The more combinations there are, the
more difficult they become to calculate. In order not to bore you or scramble your brain, we wont go through some examples that range from smaller bet combinations to massive bets such as the Super Heinz Bet. Calculating A Patent
1:Stake x (Lady Wingalong odds) x (Francis Drake odds) = Returns of 4.50 + 7.50 + 4 double returns of 4.50 + 7.50 + 4 double returns of 4.50 + 4 double returns of 4.50 + 4 double returns of 4.50 + 6 (This would be the payout if just this double won). Double 2: Stake x (Lady Wingalong odds) x (Francis Drake odds) = Returns of 4.50 + 6 (This would be the payout if just this double won).
this double won). (For 3 winners) Singles 1, 2 & 3 + Double 1 + Double 2 + Double 3 + Treble = Returns 4.50 + 7.50 + 4 + 33.75 + 18 + 30 + 135 = 232.75 Returns REMEMBER - Your stake multiplies 7 times so should you get any returns, youll need to deduct your total stake from your returns. Hopefully, this now gives you an idea of how the payouts are calculated
Bear in mind that this is one of the simpler multiple bets to calculators can save the day. The Patent Bet Calculator gives us the same returns but literally took 20 seconds to enter the
information. You can also play around and look at the payout if only 1 or 2 of your horses win. Calculating Lucky 15 BetsWe thought it would be rude not to include the Lucky 15 bet as its one of most, if not the most popular bet. The
structure of the the Lucky 15 bet is: Again, well look at a real example from Kempton Races to walk through the potential payouts. So, for this example, weve selected 4 horses from 4 races at Kempton races: Plantaroma at odds of 5.5 (9/2) Jus De Citron at odds of 7.5 (13/2) Roger Pol at odds of 9.0 (8/1) Calculating Single

The Heinz Bet Calculator is very easy to use to your eyes t
youd need to calculate all 57 bets individually using the same process as we did with the Lucky 15 bet above. Useful ResourcesIts fine to quickly work out your returns on single bets and each way bets as they are straight-forward and quick to do. However, as soon as you start looking at more complex bets it can take some time and can lead to human
error. Why put yourself through the pain when you dont need to? We have a full range of FREE ONLINE BETTING CALCULATORS to speed things up when looking at your horse betting payouts and how they work is a very
useful tool to have in your box and can also help you make strategic and informed betting decisions. Equally, understanding the odds is vital irrespective of whether you prefer decimal, fractional or moneyline (American) odds. The odds can indicate how likely your horse is to win a race. It can also equip you to spot when the bookies make mistakes
and offer value bets. Its also paramount that you fully understand the types of bets youre placing and how they work as this can influence your chances of success. Get further information in our Types of Bets article. Now that you have gained additional knowledge about horse betting payouts and odds, go smash the bookies and have fun. Horse racing
betting odds express the relationship between risk and reward. To put it simply, the odds tell you how much you stand to win with any wager. Understanding how horse racing betting odds work is the first step in getting started as a bettor. This page will dive into the topic in great detail, beginning with a simple guide to interpreting horse racing
odds and continuing with more information bettors need to wager intelligently. Learning how to read the odds in horse racing betting isnt as difficult as it may seem. Familiarity with fractions helps, but you do not need to be a mathematician to understand how the odds on horse races function. 21+ to Play, T&Cs Apply. Gambling Problem? Call 1-800-
racing odds, the first number (the numerator) shows how many units you stand to win, and the second number (the denominator) shows how many units you must risk to win that much. For example: 10-1 odds: You will win 7 units for every 2 units wagered 1-5 odds: You will win 1 unit for every 1 unit wagered 7-2 odds: You will win 7 units for every 1 units for every 1 units for every 2 units wagered 1-5 odds: You will win 1 unit for every 1 unit wagered 7-2 odds: You will win 7 units for every 1 uni
5 units wagered If the first number is larger than the amount risked. This occurs when you bet on heavy public favorites you stand to win less
horse racing betting site may display 10 or 20 next to horse names to represent 10-1 and 20-1, respectively. Horse Racing Odds Do Not Equal Likelihood to win a race, but that is not entirely accurate. Although there is usually some
correlation between a horses betting odds and its skill relative to the other runners, the odds are more accurately interpreted as an expression of public sentiment. The more money that comes in on a horse, the lower that horses odds fall. Similarly, horses with few backers pay
more because the total wagering pool will be split among fewer winning tickets. Public sentiment is often a close approximation of each horse relative strength, but do not be fooled into reading horse racing odds as any one runners likelihood of winning. The key to successful horse racing betting is learning how to spot the gaps between public
sentiment and reality. Common Horse Racing Betting Payouts For quick reference, the following payouts show how much a $1 bet would return at various odds commonly seen in horse racing. Many tracks instituted a minimum bet of $2 for most types of wagers in the past, but a $1 minimum (and even less for some exotics) is quite common today.
 Multiply the amounts below by two to see the return for a $2 wager, by three for the return on a $3 wager, and so on. The following figures include the return of the original wager by the fraction represented by the odds. The number of the original wager include the return of the original wager by the fraction represented by the odds. The number of the original wager include the return of the original wager.
you get represents the net profit you will see if your bet is a winner. Horse racing odds are easy to use when they represent whole numbers, such as: All you have to do is multiply your bet by the whole numbers, such as: All you have to do is multiply your bet by the whole number to find your net profit. For example, a $2 wager at odds of 30/1 would return $60 in profits ($2 x 30/1). Add in the return of your original
stake, and the return would be $62. Likewise, a $2 bet placed at 10/1 would return $20 plus your initial wager. It becomes slightly more complicated when the odds arent nice and simple whole numbers. For example, horse racing odds of 3-4 and 7-5 can be a little tricky. If youre not good at quickly multiplying fractions in your head, the easiest way to
figure out what you stand to win is to multiply your intended bet amount by the first number and divide the answer to that by the second number = your net profit Lets look at how you would calculate a $10 bet on a 4-5 runner: Your total profit would be $8. Add back your original
wager for a total return of $18. Another way to understand racebook and ADW payout odds is that they show you have to risk to win that much. For example, consider horse betting odds of 7-2. These odds are telling you that you stand to win $7 for every $2 you wager. Therefore, a $2 bet
would net you $7 in profits for a total return of $9. Horse Racing Morning Line Odds The morning line odds for every race. A track oddsmaker sets the morning line odds for every race to reflect how he believes the public will bet. After the morning line odds go live, racing fans can view the
upcoming race and start to get an idea of which horses will likely emerge as the betting favorites and which will be the longshots. The morning line odds are usually reflective of the relative strengths of each horse, but the oddsmaker is not handicapping the race. The oddsmaker is not handicapping the race.
bettors an idea of what to expect once betting opens. As Ed Burgart, the official morning line maker at Los Alamitos Race Course, once explained: The morning line maker is to predict how the public will wager on a particular race. A good oddsmaker can glance at past
performances and determine on which horses the majority of racing fans will wager the most or least amount of money. Usually, horses with receive much wagering attention. Local horses are usually better supported than horses coming in from other tracks. Decimal Horse Racing
Odds In some parts of the world, horse racing wagers are displayed in the decimal odds format. Decimal horse racing betting odds are even easier to read than fractional odds. The decimal and the result will tell you the
total payout including the return of your original wager. Even money odds in the decimal format are displayed as 2.0. In this case, a successful $100 wager would return $200 (your winnings plus your original bet). Likewise, odds of 3.0 would return $200. If the odds are less than 2.0, it means youre looking at a big favorite. For example, betting odds
of 1.5 would return $150 ($50 in net profit plus your original wager). The one thing you have to be careful about with decimal odds do not
perfectly translate. Remember fractional horse odds of 5/1 are not the same as decimal horse odds of 5.0. Odds of 5.0 would result in you being paid $500 in total (this includes your original wager). Horse Racing Odds FAQ Mike
Murphy is the founder of BettingUSA.com and has over 10 years of experience in the legal gambling industry. A regular attendee of industry trade shows and conferences, Mike is a strong proponent in the idea of a well regulated online betting industry. Wagering on horse racing can seem intimidating at first but are really quite simple once you get
the hang of them. It will offer some tips that the pros use to ensure that they are getting the best return on investment (known as ROI) possible. The online horse betting explained by Mike Brunker, horse racing expert and former editor at Review Journal, USA. What will you learn? How to Bet on Horse Racing Like a Pro (2025 Update) What Is a

Horse Racing Handicapping: Tips That Actually WorkMorning Line vs Final Odds What Should You Trust? 5 Mistakes New Horse Bettors Make (And How to Avoid Them) How to Use Speed Figures in Horse Racing Betting The Impact of Track Conditions on
Betting StrategyThe first thing I want to emphasize is the need to keep detailed records of your strategies in different situations. I literally do not know of a single winning player who doesn't do the
dirty work of record-keeping. The simplest wagers in horse will finish first and are willing to back your opinion with hard-earned cash. If your horse wins, the odds on the horse will determine how much you collect. You can read about how to
calculate win payoffs here. Betting a horse to place means you think it will finish first or second. If either of those outcomes materialize, you will collect. Backing (the same as betting) a horse to show means that you believe it will finish somewhere in the top three. If it does, you will collect. It should come as no surprise that betting to place returns less
than a successful win bet: You have, after all, effectively doubled your chances of collecting. Likewise, a show bet returns less than a bet to win or place. Place and show payouts are calculated by taking the amount wagered into the place and show payouts are calculated by taking the amount wagered into the place and show payouts are calculated by taking the amount wagered into the place and show pools, deducting the tracks takeout usually around 16 percent and distributing the remainder by
dividing the total equally among the winning place and show tickets. Lets say you bet $5 to win on horse no. 3, who goes off at 5-1 and runs second. You collect nothing. But if you bet $5 to win on horse no. 3, who goes off at 5-1 and runs second. You collect nothing. But if you bet $5 to win on horse no. 3, who goes off at 5-1 and runs second. You collect nothing. But if you bet $5 to win on horse no. 3, who goes off at 5-1 and runs second. You collect nothing. But if you bet $5 to win on horse no. 3, who goes off at 5-1 and runs second. You collect nothing. But if you bet $5 to win on horse no. 3, who goes off at 5-1 and runs second. You collect nothing. But if you bet $5 to win on horse no. 3, who goes off at 5-1 and runs second. You collect nothing. But if you bet $5 to win on horse no. 3, who goes off at 5-1 and runs second. You collect nothing. But if you bet $5 to win on horse no. 3, who goes off at 5-1 and runs second. You collect nothing. But if you bet $5 to win on horse no. 3, who goes off at 5-1 and runs second. You collect nothing. But if you bet $5 to win on horse no. 3, who goes off at 5-1 and runs second. You collect nothing. But if you bet $5 to win on horse no. 3, who goes off at 5-1 and runs second. You collect nothing. But if you bet $5 to win on horse no. 3, who goes off at 5-1 and runs second. You collect nothing. But if you bet $5 to win on horse no. 3, who goes off at 5-1 and runs second.
show payouts are always calculated based on a $2 bet), so you would collect $7, producing just a $2 profit on the race. The strategy of betting on horses to win, place or show is pretty basic and
depends on your level of confidence and the odds on the runner you intend to back. If you are confident that a certain horse will win a race, it is usually advisable to bet it to win and forego place and show bets to ensure that you adequately rewarded for your handicapping acumen. One exception would be if your horse is going off at long odds, in
which case backup place and show bets can be considered. Win betting on horse racing takes discipline. You should not make a win bet, or any bet, in every race, for instance. It also requires a player to develop a keen sense of what the fair odds are for each horse in a race in order to find overlays that are being undervalued by the bettors. Place and
show betting can be used if you are confident in a horses ability to hit the board, or finish first, second or third, but not in its ability to win the race. Because payouts are diminished, some players use paylays multiple race bets determined by the player to increase their profit. For example, you might connect a $20 show bet on the 3 horse in the first
race. If that horse finishes in the money, you would roll over the amount collected lets say $32.00 for the purposes of this example and bet it to show on another horse in a third race, etc., etc. So-called exotic wagers are bets that require the player to either
pick winners of multiple races or forecast the top finishers in order in a single race. Most horseplayers include such bets in their repertoire because they can return significant rewards for a relatively small investment. First lets discuss multirace wagers usually Daily Doubles and Pick 3s, 4s, 5s or 6s. The object in all these bets is to pick the winners of
successive races, two in the Daily Double, four in the Pick 4 or six in the Pick 4 or six in the Pick 6, for example. To improve their odds of hitting multirace bets, most horseplayers use more than one horses in one or more of the races. In a Pick 4 sequence, a player might feel there are three contenders in the first race with nearly equal chances of winning and use all
three. In the second race, the player figures that the solid favorite will carry the day, but race three looks like a real grab bag so five horses go on the ticket. Finally, in the final race the player singles or uses one horse a steed that appears to have a significant class edge. Expressed mathematically, the ticket looks like this: 3x1x5x1=15. In other words,
you have 15 possible winning combinations on this ticket. The cost of a ticket would be $15. If it was a 50 cent base unit, the cost would be $7.50. Using a $5 base would increase the cost to $75.In order
to win multirace wagers like the Pick 4 consistently, youll want to perfect the skill of identifying what are known as chaos races. These are races where the no horses appear to have obvious edges over their rivals, creating a situation where long shots have increased chances of winning a race. When that happens, the payout can be expected to
skyrocket. Conversely, that means identifying key horses that you can single in other races in the sequence to keep the cost of your ticket under control. Lets turn next to multihorse wagers in a single race. As with multirace bets, many players include multiple horses in these bets to improve their odds of collecting. What is a Superfecta Bet in Horse
Racing: Wager Talk TVThese strategies are usually known as boxing and keying. Boxing a bet means you are covering different orders of finish involving the same horses to avoid the situation where you correctly select the top finishers but they cross the wire in the wrong order. Heres an example that should make the concept clear: If you are playing a
$1 trifecta, you can bet three horses in the correct order of finish for $1. But if you select the 1 horse, the 4 horse and the 7 horse, they must finish in that exact order or your ticket is a loser. By boxing the trio, you are ensuring that you will win if they finish in the top three, no matter what the order.1/4/7 and 1/7/4.4/1/7 and 4/7/1.7/1/4 and
7/4/1. Keying horses, on the other hand, means narrowing the field in some placings in order to be able to spread out in others. For example, a player might decide to play a 10 cent superfecta in a race where two contenders appear to be head and shoulders the best in the field. By using those two horses in the top two placings, the player can use the
remainder of the horses in the third and fourth slots, potentially triggering a solid payoff if the top two finish one-two and long shots come in.1rst place: 1, 2, 4, 6, 7, 8, 9, 10, 11 and 12. The cost of such a ticket would be $18, based on the number of individual combinations
needed to cover those horses. Multihorse wagers usually work well when you have a horse you have faith in to win and can build tickets around that runner. But its also possible to get creating a potentially rewarding scenario when a long shot
becomes the latest to vanquish the perennial runner-up. Exchange wagering, also known as spread betting, is a relatively new wagering system that has more in common with stock futures trading than with the traditional parimutuel and fixed-odds systems used in horse racing. It is widely available in the UK and EU through providers like Betfair,
Betdaq, Smarkets, and Matchbook, but only one U.S. jurisdiction the state of New Jersey currently offers it via Poinstbet and 4NJBets. Providers of exchange betting essentially remove the racetracks or bookmakers from the equation and match players who take opposing views of the expected outcome of a race or races. The terminology also is
different, with players able to back a proposition that is place a bet predicting that an event, such as the no. 1 horse winning, will occur or lay a proposition or bet that the event will not happen. The systems also offer the ability for a player to make a counteroffer if the odds being offered are not to ones liking. Once the two sides agree on a wager and
an amount, the provider holds the money until the bet is decided, then pays the winner minus its commission. Another unique feature of exchange wagering is that it offers the ability to take opposing positions comparable to hedging strategies in stock trading, effectively creating a spread that can limit risk and generate generous rewards. As
Investopedia.com explains, Unlike fixed-odds betting, it does not require a specific event to happen. You can buy a ticket on a horse before a race, but then sell before it is run. Put in horse racing terms, you could invest $20 in a Daily Double and
decide to sell at a much higher price after selecting a winner in the first leg. Or you could part with some of the investment to hedge against an unfavorable outcome in the second leg. Either way, you have either guaranteed a profit or at least limited a potential loss. Apart from the flexibility exchange wagering offer, its biggest single advantage is that
the takeout or the providers commission tends to be quite a bit lower than the typical 15 to 17 percent withheld on a win, place or show bet under the parimutuel wagering system. Ive never wagered on an exchange betting site like Betfair, but from what Ive learned during my research most players use them as an adjunct to their fixed odds or
parimutuel wagering. For example, it may make sense to bet on a given race via a parimutuel based website with a generous rebate or bonus program if you cant get a significant odds advantage on the exchange wagering, many experts also recommend that begin by laying money against heavily bet favorites that you think
are vulnerable, as you should be able to collect in the neighborhood of 3-1 if the horse does not win. Blindly betting on top riders is a quick route to the poorhouse, as even the best usually win about a quarter of the time and post neighborhood of 3-1.
cant carry a horse across the finish line, a cute way of saying that the most skillful rider cant work miracles on a slow horse. Thats not to say that riders shouldnt play a role in deciding where to put your money and how much you bet, though. Studying the relationships between trainers and jockeys and the proclivities of riders can uncover profitable
betting situations on a regular basis. To do that, I highly recommend paying for a commercial service that allows you to examine riders performances over time and customize the output rather than trying to maintain your own records, a very time-consuming task and one that wont be nearly as productive if youre not an ace at spreadsheets. Services
like STATS Race Lens and the Daily Racing Forms Formulator software, for example, allow you to tailor your searches to situations that are relevant to the race youre handicapping. For example, you might want to know a riders record over the past five years at a certain distance while riding for a particular trainer at the track where todays race is
taking place. A query like that may show that backing a rider in that situation returns a long-term positive ROI not guarantee that he or she will win today, but information that other fans may not have at their strengths and
weaknesses. Some riders always seem to send their mounts hard from the gate to try to gain a good position, a tactic that frequently backfires if a horse is a come-from-behind type. Others may be overly timid or patient and almost always assume a position near the back of the pack in hopes of mowing the front-runners down late a strategy that is
```

more likely to bear fruit in turf racing than it is on dirt. This is an area where I like to keep my own notes for comparison to the statistics obtained through one of the tools described above or the many other services that produce similar data. A small notebook with a page for riders on a given circuit is a great way to compile observations that can add

to your understanding of a riders proclivities and help you envision how a given race will unfold. My last recommendation is to pay close attention to the top riders on a given day as well as long-term trends that favor a given running-style at a particular distance. If you see a top rider keeping his mount well off the rail in several races in succession on a particular day, for instance, you might conclude that the paths near the rail were dead that is deeper than other parts of the racing surface and enter that in your records. That may give you an advantage when horses that were stuck on the inside on that day return on a fairer racetrack. As for longer-term trends, a top jockey might have realized that a high percentage of horses with speed that are drawn inside are winning most of the one-mile dirt races at a given track. These riders will make getting to the rail in front in the early stages of a race a priority, sending a signal to attentive horse handicappers in the process. Another interesting scenario that can be productive from a betting standpoint occurs when a top rider lands on a long shot. These jocks often worth additional study. Some signals that the horse might be live despite its long odds are sharp recent workouts, a change in distance or racing surface that could serve as a wake-up call or a race after the horse was claimed or purchased and moved to a new barn. Again, it is not wise to bet on such runners automatically. Many top jockeys have strong relationships with certain trainers and will ride virtually anything they send out. Or they may be riding a horse in an unfavorable scenario today in order to retain the mount for when the horses is switched to a new distance or racing surface where it can be expected to be more successful. As with jockeys, betting blindly on horses trained by a certain conditioner is almost never a profitable strategy. Trainers, more so than jockeys, are intimately involved with preparing their charges to race and play a bigger role in the outcome than the riders in most races, in my opinion. As with jockeys, however, a trainer cant make a slow horse run fast. But he or she can be sure it is mentally well prepared to compete and place it in a spot where it figures to be competitive. While some top trainers win a high percentage of races 25 percent would be considered excellent over the long term punters usually catch on to their prowess quickly and begin betting their horses to such an extent that the low payouts result in long-term negative return on investment (ROI). The solution to this dilemma is the same as it is with jockeys: You need to drill down into a trainers overall record to identify their strengths and weaknesses, the riders they use in different situations, their preferred workout patterns, etc. To do that, I again will highly recommend paying for a commercial service that allows you to examine trainers performances in different circumstances over time rather than trying to maintain your own records a very time-consuming task and one that wont be nearly as productive if youre not an ace at manipulating spreadsheets. You can usually find overall statistics for free, but In the U.S., services like STATS Race Lens and the (DRF) Daily Racing Forms Formulator software, for example, allow you to tailor your searches to situations that are relevant to the race youre handicapping. DRF Bets ResultsFor example, you might want to know a trainers record over the past five years with sprint winners coming off a layoff of at least three months. Database queries like that often uncover situations that return a long-term positive ROI not a guarantee that he or she will win today, but at least information that other fans may be lacking. On your favored circuits, I also recommend keeping notes of your observations about how various trainers prepared their winning charges for the race you just witnessed. I typically just use a notebook with a page for every trainer, then start anew at the next stop on the circuit after transferring any top-like takeaways. Youd be surprised the insights that such anecdotal reports can generate when patterns begin to emerge. A certain trainer who is very good at getting his or her charges ready off a long vacation may, for instance, default to a set pattern in workouts in the final stages of preparations say five fast workouts six or seven days apart, beginning at 4 furlongs and increasing to 6 in the final spin before a race. The routine may change, depending on whether the trainer is preparing a horse for a sprint or a longer route race. Bob BaffertSome trainers have a much stronger record on one racing surface or distance. That can also be ascertained through the statistics, but it helps if you know what to look for. A high-profile example in the U.S. is Hall of Fame trainer Bob Baffert, who has produced winners on the dirt and all-weather tracks at the sterling rate of 24 percent over his illustrious career. On turf, however, he has won with just 14 percent of his starters over the past five years as of this writing. Finally, a trainer may turn to a certain jockey or jockeys when he or she is hungry for a victory. Knowing those relationships can uncover plenty of winners over the long haul, often at very nice prices. Bottom line: Trainers, more than jockeys, are often a determining factor in my handicapping. If any trainer in the race has been successful in the long term in the situation they find themselves in today, I want to know about it and most likely bet it at the windows. Want to know more how to bet on horse racing? Here is our complete betting guide with answers to 71 common questions related to online wagering on horses in the USA.
