For the price, it is hard to beat the value. The concept of mesh is interesting, but make sure it is the only valid option before you decide to go down that road. Some controller features require the purchase of additional products (such as Unifi Security Gateway), but these are optional. Mesh is ideal if you have power but not connectivity in a given location.Control software is also required to control these units. All units are heavily exposed to adverse weather conditions, including rain, humidity and wind. The total price for an OM2P with the unit itself, weatherproof case and PoE adapter is higher than the cost and doesn't come close in terms of specifications or features. Unifi controller recommended for networks of up to 50 Unifi devices. Recommended for running Hotspot servers, managing access points, monitoring users, displaying maps, statistics, etc. The performance is still quite decent. I did not play with the Pro version of these devices because their form factor is not suitable to be mounted directly on boats, but if you need a more powerful device, this is what I would be looking for. I'm actually impressed that this software is free to download and use when you buy a \$100 device. I'll explain them here:1) This unit will work perfectly independently, both internally and externally as an AP (without router functionality as I explained above) 2) If you have more than one of these units, they can form a wireless mesh network. These are not configured by a web interface. What am I doing wrong? They have more powerful internal 3x8 dbi antennas, their maximum transmission power is higher and they are 3x3 MIMO instead of 2x2.All in all, I think this is an incredible value. .eter .eter allus enoisufnoc id 'op nu icresse arbmes .otsiv oh ehc ednamod el e inoisnecr ellus imodnasab .ertlonI .001\$ id onem atsec ehc tniop ssecca nu And how and where can be used. The negative side of this model for non-tech experienced users or easier use cases is the complexity added. First of all, this is not a router. I put your hands on an AP Unifi, it's an old model, shows Obsolete and "Model - UAP" on the management tool. It works with the PoE injector but if I connect it to my unifi 8 150W switch it does not turn on. One of the units must be connected to a wired UPLINK, others can be connected wireless to this wired unit. Another relatively negative problem is the lack of antenna options. I manage all the access points in the tourist port from a controller that I installed in the cloud on a Linux / Ubuntu machine. As such, there is a high degree of interference to especially 2.4GHz, even some at 5 GHz. It may not display this or other websites correctly. Update or use an alternative browser. These are dual band antennas and there are many options for dual-band antennas to extend the range. If you have the possibility, the wired Uplinks will provide performance by far superior to mesh as each mesh hop halves the bandwidth available. The software app version of the software can solve this problem, but you need to check the reviews of it separately as I didn't use it. In terms of performance, as I said, I use them in a tourist port, mounted on Halyards And trees about 30 feet tall. There is also a mobile app that I think can be used to configure them but I didn't test it, so I can't confirm. HYCHRIDE TECHNOLOGY DE LURED Y CONTROL PROVISIONS UNIFI PODEROSA Y CompactA Arquitectura InstalaciÃ³N PlugÃ & Play Ã, you are using an obsolete browser. Ubiquiti does not have a dual band antenna for these units starting from this writing, but based on forum discussions I understood that they are for One. To get any real practical value from the software you need to have several of these units however. And marina is close to several industrial industrial (for reference, 641 adjacent access points seen in the last 72 hours as measured by the software controller). Everything from the cloud without having to go to the site.Technical specifications:Quad-Core processor1 GB RAM DDR1 Gigabit port 10/100/1000 Mbps 802.3af or Type-C power supply (Not included) Micro SD for backup (Included).Controls up to 50 devices UniFi.Package includes the following: *1 year warranty. It is an enterprise-class external access point, at the price of a mid-range consumer router and has the form factor of a long, large pen (or box of it). They haven't been operating for too long yet, but they haven't encountered any problems under almost constant rain for 48 hours.Before we go any further, let me tell you what it is and isn't. The software itself is quite impressive and is an enterprise-class wireless network management system. If you only have one, the software probably won't provide much value and could also be a hindrance. I run a mesh with more UAP-AC-Ms and they work smoothly).3) If you have more than one of these units and can provide wired uplinks at all, they will also work remarkably without a mesh. The longest wireless uplink is made at 460ft line-of-sight with default rubber omni antennas at 117 (Tx) / 234 (Rx) Mbps speed, which is more than suitable for this scenario.The default antennas are ok, but nothing exceptional. Most consumer end routers combine the AP functionality with a router that does many other things, this one won't have those (at least without specific add-ons). add-ons).

Ubiquiti UAP-AC-LITE UniFi AP AC LITE 802.11ac Gigabit Dual-Radio PoE. ... with the ERX and a 2x Ubiquiti UAP AC PRO I'm pulling down 250mbps over WiFi, no saturation. Pretty happy so far ... I didn't read the manual and looked like an idiot trying to figure out what went wrong for a solid 15 minutes. Epic facepalm did occur. SYSCOM: UC-CK-UBIQUITI-NETWORKS - Controlador Cloud Key para gestionar 50 equipos UniFi desde la nube, servidor hotspot, alertas a correo, actualizaciones masivas, etc. 802.3af SYSCOM: UAP-AC-LITE-UBIQUITI-NETWORKS - Access Point UniFi, doble banda 802.11ac, MIMO 2X2, soporta 100 clientes, hasta 867 Mbps, para interior, PoE 802.3af.
