You will need to install these tools or use the already installed on your computer. It may be a C ++ and debugger compiler provided by your academic development environment or work. Check with your instructors and colleagues to get guidance on the installation of the recommended C ++ toolkit (compiler, debugger, design system, Linter). Some platforms such as Linux or MacOS, have a C ++ compiler already installed. Most Linux distributions have GNU Compiler Collection (GCC) installed and MacOS users can obtain the clang tools with XCODE. Verify that you have an installed compiler Make sure your compiler executable is on your platform path (% path in Windows, \$ PATH on Linux and MacOS), so that the C / C ++ extension can find ĩLo. You can check the availability of your C ++ tools, opening the integrated terminal (a '(Windows, Linux Ctrl + ') in the vs code and try to directly run the compiler. If you do not have a compiler installed, in the example below, we describe how to install the Minimalist GNU for Windows (MINGW) C ++ tools (compiler and debugger). Mingw is a popular, free for Windows tools. If you are running Cotigo vs on another platform, you can read the C ++ tutorials, covering C ++ settings for Linux and MacOS. Example: Installing Mingw-x64 We will install MingW-W64 via Msys2, which provides native up-To-Date GCC versions, MingW-W64, and other Tools and Soft C ++ libraries. Click here to download the MSYS2 installer. Then follow the instructions on the MSYS2 website to install MingW-W64.
