NBABleacher NBA Report StaffFeatured ColumnistAugust 18, 2017NBA 2KWelcome to a new NBA, basketball fans.Over the past week, Hasa whitener's report unveiled the results of our team's 30, 360-player re-project. If you've missed in any of the previous installments, now is your chance to get the end up.In toa review each list in its entirety trapped, that last link Willa be your best As friend.How much to answer the question of who has the best template? That's what we're here to find out. Where NBA 2KOnce our lists were in place, we put all 30 teams through the drainer which is a 2K Nbaa simulation. We think we stopped at a given moment and called it a day? Think process again.Our included 50 simulations in a separate season using the squadrons that each de facto general manager as a whole. This created a better sample size and the extreme values made sure were less impactful on the ultimate results.On the way, we placed things such as projected stats season leaders, top prize winners, estimated total winnings, and championship odds. This is how each of those categories Wasa calculated: Statistical Leaders: After each simulation, we observed that it won the major categories of statistics. By the time the 50 Sims were full, we took each winner and divided the number of times they won by the total number of simulations. For example: if your favorite player won the scoring title 25 times out of 50, we're giving him a shot 50 percent, to take home that honor.Winning Prizes: The same process applies to this one. If the favorite reserve player won Sixth Man of the Year 13 times, we split 13 by 50 and reach a 26 percent chance of winning prize on our league odds.Championship: Beginning to see a If your favorite team won a championship with their new list 10 times out of 50 simulations, we're giving you a 20 percent chance of taking home the Larry O'Brien trophy. (This is also the way we came up with postseason odds.) Win projected totals: It took us each total wins over 50 simulations simulations He calculated the average. We also track the sowing average to add additional context — after all, a 43-win season can mean the playoffs a year and the lottery the following — but it will use the projected totals of profits by sorting each team from here on. NBA 2KAs started with our first prize, we could do a lot to make this a dramatic presentation. We could explain how the average points per game between No. 1 and No. 2 was only within one point or so in multiple simulations. We could even break the story behind this 1-2-star-powered confrontation. But we're not gonna make words from here, folks. Russell Westbrook left with this one, leaving our simulation with a 29.3 point projection per contest, and an even more impressive possibility of losing the score title. Russell Westbrook, Oklahoma City Thunder (94 percent)James Harden, Dallas Mavericks (6 percent)NBA 2KWhile the battle bounced on 2K Land was closer than the score contest, that's more than an indictment of the latter than a testament of how competitive it really was. Of 50 simulations, Hassan Whiteside managed to get away with 30 rebounding titles. It was Andre Drummond who was able to hit the highest number of single season rebounds (15.8), but the new center for the Phoenix Suns only managed to win half the rebound championships when everything was said and done. Hassan Whiteside, Charlotte Hornets: 60 percentAndre Drummond, Phoenix Suns: 30 percent DeAndre Jordan, Portland Trail Blazers: 10 percentNBA 2KAnother category, another Hassan Whiteside favorite. As dominant as Whiteside's projections were when he came to the careful craftsmanship of picking up the caroms, the brutal business of blocking the cubes was even more in his favor. During our process, Whiteside awakened the competition to the melody of 34of blocks and a projection of 2.9 blocks per game. That number, as it is, would be enough for the fifth all the time. hassan whiteside, charlotte hornets: 68 percentrudyutah jazz: 26 ptentdeandre jordan, portland trail blazers: 6 coctnba 2kwe have to admit that we really expected underdog to leave the left field to take this so we could talk about how this competition was really stolen ... aloy, not such luck. We'll just have to go with the predetermined plan, which is talking about how amazing kawhi leonard has been, is and will continue to be. remains: the claw continues to win its nickname. between its size of 6'7 "and the incredible instincts, it becomes practically impossible to find a true comparison with it in the perimeter. In our simulation, leonard dominated the field by collecting 2.1 swipes per contest. chris paul and giannis antetokunmpo did everything possible for clog lanes and pick pockets, but it was the most recent member (and almost a member) of indiana pacers who escaped with the label of the favorite title. He won the prize a total of 38 times during the 50 simulations.Kawhi leonard, indiana pacers: 76 posternchris pablo, cleveland cavaliers: 14 covellantygiannis anttetokunmpo, sacrament kings: 10 poscentenba 2kdamian lillard has never been known as a pierno point. so averages during the 2017-18 season (27.0 points and 5.9 assists) show that it is certainly well rounded, but the score is the name of the game regarding the product of the state of weber. As far as it is concerned, something clicked that he joined kevin love and houston rockets. from the beginning of the simulation in, give me d.o.l.a. was dropping some serious dimes. He regularly collected more than 10 assists per night, and did so as it was routinely projected to score at least 25 points per contest. When it comes down to it, there's really one thing to say. mild to mike d'antoni to unlock another level of its franchise point guard.Damian lillard, houston cohets: 42 pentrusell westbrook, oklahoma city thunder: 34Paul, Cleveland Cavaliers: 16 Etpodohn Wall, Boston Celtics: Á, 8 postctnba 2k Auditions Our simulation, five different different Projected as winners of the three-point crown. That is more than any other individual statistics we continue to track, but in the less impressive news of all this project, the chef curry cooked something fierce, with an average of 45.2 percent of his depth shots and winning the award 21 times total. Stephen Curry, Golden State Warriors: 42 COCTONDAMIAN LILLARD: 26 Postingjames Harden, Dallas Mavericks: 20 Thompson Perculus, Memphis Gribrylies: 10 PercentosCj McCollum, New Orleans Pelicans: 2 perceive pelicids of the age of today's age of analytics Baliphaliza de Baloncetics, Advanced Metrics have approved if you love the statistics that go beyond a cash score, those who use them are geniuses calculating the game at an exciting and modern level. If you hate them, the media and gals that throw them on your face are nerds that have never collected a basketball. But while few are ambivalent about what they have to offer, there is a very simple thing in which we can all agree: they exist, and come to you this moment (in small quantities, to avoid scareing non-believers). The following statistics indicate what players are projected that they will land in the last three of three popular advanced statistics, as well as their chances of doing it .USAGE RATERUSSELL WESTBROOK, OKLAHOMA City Thunder: 100 Penthames Harden, Dallas Mavericks: 96 CoctentGiannis Antetokounmpo, Sacramento Reyes: 94 Percentage Equipment Percentagetephen Curry, Golden State Warriors: 88 Point Poithevin Durant, Los Angeles Clippers: 88 TipsBrandán Wright, Atlanta Hawks: 84 PublicStimated WINS Following Westbrook, Oklahoma City Thunder: 96 Pomentkevin Durant, Los Angeles Clippers: 94 Centurslebron James, New Knicks: 93 percent. NBA 2kgreg Monroe is an elk in a league in love with unicorns. The game style of it is considered a backwardness by those who are willing to put it very But maybe all this just needed a change of scenery. Cattle recognition by MIP chances was Myles Turner, Jusuf Nurkic and D'Angelo D'Angelo While these three are more likely to win the prize in reality, Monroe got some Warriors magic and took the trophy just under his feet in 25 of our simulations. Greng Monroe, Golden State Warriors: 50 by Scientoomyles Turner, Brooklyn Nets: 26 Percentjusuf Nurkic, Oklahoma City Thunder: 20 by Scientodâ € ™ An Gelo Russell, Brooklyn Nets: 4 by scientonba 2kaother Sighting of Hassan Whiteside! Regarding our simulation, it was clear that there was a love Obviously by the Whiteside blocks. In fact, a high priority was fixed in the search block, as evidenced by the absence of boys like Kawhi Leonard and Chris Paul. All this concept, however, makes the omission of Rudy Gobert a bit mysterious. However, four large block collectors and an emerging swatter (demerged?) Do the cut.hassan Whiteside, Charlotte Hornets: Ã, 56 by one hundred Davis, Atlanta Hawks: 22 percentAndre Drummond, Phoenix Suns: 12 percent , Brooklyn Nets: 8 percentGiannis Antetokounmpo, Sacramento Kings: 2 by scientonba 2kquando The GM of Detroit Pistons was defending his list of 12 men in our last delivery of the re-edge, he explained how Paul George was going to win his first MVP. He said that Lamarcus Aldridge and Derrick Rose would return to the All-Star Game. Then he released the microphone: "And since we are in it, Bogdan Bogdanovic, sees to get your award to the sixth man of the year." If we are frank, and forgive the spoilers: two thirds of those things did not happen. One, however, occurred in a very big way. Bogdan Bogdanovic got his sixth-man man.Bogdan Bogdanovic, Detroit Pistons: 70 percentFrank Kaminsky, Orlando Magic: 14 by scientosic scientific, Atlanta Hawks: 10 by scientolauri Markkanen, Houston Rockets: 4 By scientolance Stephenson, Brooklyn N Sets: 2 by 2kbuene scientonba, it's time. We have finally have a renewed rivalry between Lakers and Celtics! Well, Not once yet. After all, these two teams were at almost exactly opposite ends of the spectrum of success in this simulation. simulation. RAY RACE between Guards Markelle Fultz and Lonzo Ball is any indication, this HateFest interference is forced to resurrect soon (at least in this fantasy league). Markelle Fultz, Boston Celtics: 52 Penthionlon Ball, Los Angeles Lakers: 48 POSTINGNBA 2KINE IDEAL League, the MVP race is going to be close. The debate will shine, it will be controversial, and it will have a lot of competitors who have their own valid reasons to deserve the prize. News Flash, friends: This is not an ideal league. This is Russell Westbrook's league. Throughout our 50-fold single-season simulation, Westbrook projected an average of 29.3 points, 12.4 rebounds and 9.9 assists. So, no, he didn't promise a double for the second year in a row. But what's amazing is that the simulator gave him a chance of 60 percent doing it based on 30 dub crew seasons of 50 simulations. This is all going to say: I'm sorry, field. This was Westbrook's to lose all the way. Russell Westbrook, Oklahoma City Thunder: 86 CENTURSTLEBRON JAMES, New York Knicks: 8 PAYMENT OF CONTRAMIOS ENDUERTE, DALLAS MAVERICKS: 6 POSCENTENBA 2K15. BROOKLYN NETSProyected WINS: 26,26 Stir the seed: 14.58 In our simulation, the nets took a page directly from the book of, well, the networks of Brooklyn. In 50 simulations, the squadron composed of Joel Embiid, Myles Turner, D'Angelo. Russell and a healthy mix of veteran guards found themselves at the bottom five of offensive efficiency more than any other franchise. He was also a team at the bottom of the defensive efficiency and (also in the style of Brooklyn) tied to the New York Knicks for most of the first five visits at the team's pace. However, the biggest problem, however, was keeping its franchise center on the court. Joel Embiid promised 17.4 points, 10.0 rebounds and 2.6 blocks per game, butmanaged to stay healthy for 65.7 contests a season.14. Toronto Raptoringsproyected Wins: E 31.46 Seed Food: 13.10 When the raptors drafted their start five, their GM stated: "We may not win a of the games, but in comparison with some of these other equipment (* cough * jazz * cough *), we will be entertaining as hell. "To begin with, we will say that jazz will get the last laugh here. But as for the Raptors, his young nucleus of Devin Booker and Ben Simmons proved more potential than production, as well as announced. In the year. Or, Booker projected that he published 21.9 points, while Simmons joined a cooler 13.2 points, 9.6 rebounds and 5.7 helps per night. However, the problem in question was that the second tallest scorer of the team, on average, totaled only 13.7 points per contest. In general, we will continue to observe with fear of missing that exit where Simmons collects 30 assists and 71 points of Booker. It will happen, and the pomo is Real.13. Chicago BullsProyected WINS: 35.54 The Week of Assieces: 11.26 Here are the bad news for the Chicago Bulls: They were not very good. Throughout our process, this group averaged the third points per game at the conference. If you want to blame at hat at your rhythm, it's from below, five , as of the mita D From the simulations, you may want to consider the fact that you were also constantly at the bottom five percentage of three points and an offensive qualification. But here are the good news: they were siege enough to choose Nikola Jokic, who became a first center of the first team NBA. The rookie season of Dennis Smith was not so impressive, since some believe that he will be in the real world, since he rarely found the first team of All-Rookie. But highlighting it in an alignment with Jokic (not to mention Eric Gordon, Jae Crowder and Dario Saric) should translate to a large number of butts on a lot of seats .12. WHAHTON WIZARDSPROCEDET WINS: Á, 38.18A Seeder: 10.01 Wizards entered our banking editor in the rapid development of your youth. They knew that they had cities Karl-Anthony as a crutch, giving them a lot of confidence running with Julius Randle and TJ Warren at his initial field place. The problem? The potential is not always equally production. This is He had the depth of veterans to compete, but he tries to say that to the simulator. 11. Orlando MagicProjected WINS: 38.48 Average Seed: 9.58Gordon Hayward is directed east in the real world to play with an ultra talented guard this next season. In 2K World, the same can be said, except replacing Boston with Orlando and Isaãas Thomas with Bradley Beal. Although this team had some second-round races in our post-season simulations, they turned out to be more complete. The team lost the playoffs as many times, showing that magic could not last for this sub-500 team. NBA 2K10. Miami Heatprojected WINS: 39.47 Average Seed: 8.5Baunque The Miami is projected that the heat will be less than a better game than Orlando Magic, they finished our simulation 6 percentage points ahead of them when it came to their chances of doing the playoffs. We will break down all the Playoff percentages here in a bit, but now we know we are 100 percent at Mike Conley-Marc Gasol under Erik Spoelstra. Under a new coach in a new system, Conley finally seemed to have the love that is lacking as an undervalued superstar call. This process showed that it had not questioned the stardom of it, since he became an All-Star for the first time, as well as a regular member of the First All-NBA team over 50 simulations.9. MILWAUKEE BUCKSPROJECTED WINS: 39.72 Average Seed: 8.38 Bucks Milwaukee had an upper and down experience here. Despite being only the ninth at the Conference in Projected Victories, they managed to do the playoffs in 74 percent of the simulations, a number that would be ahead of the two next teams on this list. How does that happen? Many good seasons (some of which landed at the NBA finals) and many bad seasons (who saw them place them at the three of them at the conference). Fun: Throughout this experiment, First beginning of this team (usually Khris Middleton) averaged 16.9 points per night. FUNNER FACT: That was only 4.6 points per game more than its lower startup over the of the 50 simulations.8. Charlotte Hornetsproyected WINS: 40,48A sown: 8.40in Part 3 of our reduced, Charlotte's GM declared: "These wasps are going to play fast, they threw a ton of three in three and made it difficult to oppose the crimes to be the clean clerks." The kind of simulation heard. Our process was exhausted, and this group was shot, in fact, well from the deep and the game at a fast pace (often in the first five or 10 in the categories). When the simulation had a selective audition it was in the volume of three. It wasn't weird for this group, led by Demar Drozan, to be a background-level squad in three pointers made and tried. We're thinking it's time for this GM to take the head training responsibilities, with guys like Patty. Mills, Buddy Hirf and Nick Young PIthing for more shots.7. DETROIT PISTONSPROYECTED WINS: 41.13Wake Seeds: 816 Like the Hornets before them, the Pistons finished our simulation with a probability even 50 percent of making the playoffs. Unlike the same insects of the same light, this group found a decent amount of success once it arrived there. We won't go too far in numbers (you have to keep reading for that), but the Pistons, led by Paul George, Lamarcus. Aldridge and a lot of fun guards, found a way to get the same final championship projection as the fourth best team out of the east, by projected WINS.Bogdan Bogdanovic proved to be theft of this draft when it became the only player written after The 41 (257) selection to get any projection for the NBA MVP.6 finals. New York KnicksProyected WINS: 44.20Avervew Semerge: 5.54way back in round 1 of our cut, Knicks' GM asked for a very simple question to begin its justification for Lebron James's writing. "Do I need to explain it?"continued To decompose how the state of Lebron is still dissatisfied throughout the league and how his companions do not become, so they become better in his presence, let's sum it up in four simple words. The Lebron James effect.If you've ever seen LeBron and you know he's harvesting. Harvesting. The proverbial switch is turned, are not alone. Our simulator has also seen it. More than 50 simulations, James' Knicks could not project as a team that could gain advantage on the court on the playoffs. And yet, when he began the post season, that change turned, and his team became a group with three chances of taking home a conference championship. NBA 2K5. Indiana Pacers Projected Earnings: 44.24 Average VÃ © Ase: 5.66 Indiana Pacers â € "A team that can finally experience what Kawhi Leonard would have in a Circle City uniformâ €" ended slightly better than the knicks in projected victories. The capture is as good as the claw, which does not have the Lebron James effect. Leonard ended the simulation process with a projected height line of 23.5 points, 7.1 rebounds, 5.5 assists and 4.0% three-point shooting. These numbers help lead an initial unit composed by Dennis Schroder, Tyler Johnson, Markieff Morris and Clint Capela. Unfortunately, when the post season came, the victories of the series were few and far from each other. This team reached two endings of the NBA, but also saw many first-round departures despite the high views.4. Projected earnings: 44.30 comparison average: 5.74 "Challenge me. I doubt. Desprespect, tell me I'm older. Tell me I'm slower. Tell me I can not fly, I want you to do it." I'm fine. Maybe these Atlanta hawks have not reached Michael Jordan's vinification levels. Maybe quote it in reference to Joe English, Jru So Holiday, Derrick Favor, Milos Teodosic, Vince Carter and others is a fan of the best, I was the worst. But this is a list full of types that constantly fly under the radar and bite when you least expect it. This equipment has pieces that will be in reports of explorers everywhere before the casual fan even knows that they exist. This team also has Anthony Davis. So there's that too.3. Projected Earnings: 46.32 Average Seeds: 4.58 In the words of our Boston Celtics GM from Round 2: "I have two points guards! points! Is hell my problem? "The GM continued:" My problem is that this is a Point Guard League. He needs boys in multiple positions that can handle the ball and create shots by themselves. "Those two points of points in question are not others who are not John Wall and Rookie Markelle Fultz. And as a result, this GM knew exactly what I was doing . Throughout our simulation, not only the Celtics found a tremendous success, but his Elite Backcourt was also projected to combine for an impressive 42.8 points, 18.0 assists and 8.5 rebounds per night. The quarter part S Awesome is that neither the wall nor Fultz wore most of the majority. Weight in any category, which makes this a tandem on the bottom part we are salivando to see in real life.2. Cleveland CavaliersProyecetted Win: Ã, 49.1444 São, I know, I know, the Cavaliers are close to the top of the East. In a cut? Well, yes, but these are not the Caves of His grandfather, these Cavs, anchored by a Chris Paul that projected a Average 18.0 points and 10.7 assists per night, it is composed of the versatile Avery Bradley, A (we hope that the growing star at Harr Ison Barnes and Jonas Valances of 25 years. And do not forget the always entertaining Larry Nance Jr. and a potential star in Nikola Vucevic, who needed a landscape change. Ok, you catch us. This team also has deron Williams, Kyle Korver and Timofey Mozgov, who have been in Cleveland at some moment of their careers. But he trusts us. These Cavs are different, and find ways of having success without their king. Philadelphia 76ersProjected Victories: 49.18A High Quality Seeds: 3.2 We are 99,999999 percent Surely this is not what Sam Hinkie had in mind when he created the process. Do you start cousins? Andrew Wiggins? Dirk Nowitzki? OJEREMY LIN? These are not exactly "active" here. But we are also sure that this group and fans don't mind a little considering the success they will find with this list. In the words of our GM Sixers of our most recent Quotes: "Ignore for a moment the amazing amazing amazing that each holder is a shooter three points better than average and looks at the personalities of this team, Matt Barnes, Tony Allen, Boogie Cousins, Joakim Noah. Imagine these personalities together in a playoff a year ± or without superequiposÂ ".We have seen the future, and is a solar eclipse without shadows brillanteÂ" with respect to a league of supercomputers a year ± o. (Read on to see the full title of the Eastern Conference and projections of the NBA Finals for the 15 franchises.) NBA 2K 15 minutes. Minnesota TimberwolvesGanaciones projected: 29.30Promedio Seed: a 14.28Pobre Kristaps Porzingis. Finally escapes from the clutches of James Dolan and the New York Knicks, is selected by a franchise that looks promising on paper and does not know how to go ganador.Aunque Porzingis star shines throughout our simulation (18.3 PPG, 7.4 RPG, 2.3 BPG, 37.1 3PT%), we can not say the same for the Wolves. This group, which debÃa defined by the talent, length and athleticism, he finally convirtiÃ³ in the last five team in points scored per 100 possessions and allowed points per 100 posesiones.Cuando is that, we think there are two factors at play. For starters, this team expected a rebound in the production of Brandon Ingram and the other young puppies. That probably he never spent. But the style also © n is a great fundamental coach Tom Thibodeau concern àquÃ.El tenÃa this team running at a pace that constantly colocÃ³ in the last five or ten in the league. Provision must tell someone that's not okay, not in absoluto.14's OK. Los Angeles LakersGanaciones projected: a 32.48Semilla medial: 12.88Los Los Angeles Lakers are in position 14 instead of 15 because of a few huge seasons. They managed to reach the playoffs in 8% of our simulations, and although that remains the third lowest one of the conference is a testament to A young court can shake a league when it's all right. In Los Angeles, Lonzo Ball's duo and Kemba Walker do all the work. And we areall the work. Throughout our simulation, The ball brought together a projected line of 14,2 points, 7.3 rebounds and 8.4 assists. Walker contributed 19.8 points and 6.9 assists. The capture is that while the basic score of the box looks impressive, both usage percentages typically ranged from 29 to 34—numbers comparable to Kemba himself and James Harden. We know these two love to share the ball. Now they just need to start sharing with other people. 13. New Orleans PelicansProyected Wins: 35.40 Average Seed: 11.70 New Orleans GM Pelicans spoke calmly during our initial analysis 5 on the need for more defense. Unfortunately, I was about to. Through 50 simulations, NOLA left an average of 108.6 points per night. And while we would love to say that it was due to a fast pace that comes from that exciting backcourt of Kyle Lowry and CJ McCollum, the team also projected at the bottom five of the defensive classification and the pace more than any team not called the Lakers. For what is worth, this team can still be exciting, as backcourt sounds ridiculously fun. Get these guys a shooting blocker and I'll get better from fourth-season tickets to half-season. 12. Denver NuggetsProjected Wins: 36.54 Average Seed: 11.20"Defense? Where we're going, we don't need a defense. "These are the last famous words (almost) of the Nuggets GM in the most recent installation of our re-draft. Throughout the course of our simulation, the Nuggets planned to give up the second most points per game to the west and the third most in the league. Carmelo Anthony — the sweater and everything — could not find a way to make up for the difference in offense, and the team, which also had the tastes of Jabari Parker, De'Aaron Fox and Seth Curry, only had enough points for an average of 105.0 per night, putting them in the lower third of the conference fornet margin. The GM mentions at the end of the re-disposal that he would consider moving Anthony if a quality shoot guard hit the market. If that happens, we will always do it. will. The memories of Mile High Melo 2.0.At least the guy got his Skylar Grey moment.11. Sacramento KingsProjected:Ã¶ 38.18Average seed size: 10.02If you thought Giannis Antetokounmpo had exploded as a star during the 2016-17 season, you haven't seen anything yet.In our simulation, Giannis plans to average 25.4 points per game and collect 9.4 rebounds, 5.8 assists, 2.5 steals and 2.3 blocks per night game. Do you know how many players have put that line in the history of the game? Zero. No, not Agent Zero. The Greek Freak has just projected himself as the first player to put such ridiculous numbers.We don't even care about the victories projected here. We're buying our shirt as we speak.NBA 2K10. San Antonio SpursProjected Yields: 38.96 Average Seed: 9.46Jimmy Butler is very good at basketball. This has been established, and its projected stats line of 21.4 points, 6.1 assists and 5.7 assists per game acts as additional evidence if you need it.Here's the funny thing, though. Their estimated wins added up took a backseat to Eric Bledsoe. Yes, the same Eric Bledsoe whose EWA was 10.2 points below Butler's just a year ago. Nothing. His EWA dropped a bit from 20.5 to 18.7, but let's give credit where he owes it (especially to Gregg Popovich) by watching Bledsoe shoot from 10.3 to 18.8.The only downside is that if you're going to win big, you probably need Butler to be your best player. Oh, good. Lesson learned.9. Golden State WarriorsProjected Winnings: 40.58Average Seed: 8.60For NBA fans fed up with watching Cavs-Warriors over and over again in the finals, you've already learned that there's a good chance Cleveland will make it to our 2K World. But lucky for you (sorry, Dubs is waiting), there's only a 46 percent chance that this iteration of the best in the Bahia area will make it to the playoffs.That said, these They can still put on a show. As you've seen in this piece, Steph is (obviously) an off-light shooter who will probably win a three-point title. Greg Monroe is suddenly a Again, which means the moose is loose. And, as you may know from our full list failures, this equipment has enough depth to put on a show for 48 minutes. No, you may not be elite anymore, you fanatical dubs. But that's fine. That just means you're like the rest of us again. (It's not as bad as it sounds, I swear.) 8. Memphis GrizzliesProyected wins: 42.38A seeded: 7.36 now we get to the Western Conference squadrons that not only had an average seed in the playoff position throughout the simulation, but we've also gotten to the teams that had a 50 by Hundred or better shot. In the qualification for the postseason. As Memphis is concerned, this is a group defined by an efficient crime. The team averaged 107.6 points per contest behind Klay Thompson and Blake Griffin, the sixth-highest record of the conference, and was consistently hovering around the top 10 in offensive efficiency. Without going too far, this squadron ended up deep in deepening. Playoffs several times. All right, right, semi-spoiler alert: if you are looking at the two stars mentioned above, you are looking at a projected MVP.7 Finals. Oklahoma City ThunderProyected wins: 44.54Averlower seeds: 6.14 We've said it before, and we'll say it again. This is Russell Westbrook's league. Without going even deeper into their stats than we already have, their impact is clear. I felt in this version of thunder just like in real life. And that's wild. Thinking that your video game character needs to live to your real self is unheard of.jusuf Nurkic was great, J.J. Redick was the perfect complement, and in GM's words, this team has "space of separation, defense and reserve to surround the core, which is exactly what a modern NBA team needs." But let's call it that. Westbrook's a stud. Go, Brodie.6. SunsProjected WINS: Ã, 45.53A PREBOND: 5.41The Phoenix Suns did one thing very similar to a fool in this simulation. They decreased it. Although this may sound from a foreign nature in nature in the desert, it seemed like Finish the job. The group Isaiah Thomas and Andre Drummond-LED jumped between the state of the bottom five and the bottom 10 in the pace, but managed to be the top team in terms of points for every 100 possessions in about 20 percent of the simulations.nba 2k5. Houston RocketsProyected wins: 46.27Seed rings: 5.26SE Do you know how we just talked about suns doing very lonely like things? Apply that same discussion to this Houston Rockets Group.Despite that he is still coached by Mike D'Antoni, the Lijard LED Group now Damian, he decided to abandon the pace to near-five and increase his efficiency to the number 1 team in the league in points for every 100 possessions. With Lillard a first-team NBA player and Kevin's love averaging 20-PLUS POINTS and 10-PLUS rebounds in most simulations, guys like Victor Oladipo, Steven Adams and Terrence Ross were able to slide into their respective roles and watch the victories on the stack.4. Portland Trail BlazersProyected W INS: 46.36Cold Seeds: 5.32The Portland Trail Blazers took a steering wheel on Kyrie Irving and her desire to be the man. When it turned out, it was a high-risk situation that came with a big reward in the Form of Success of Second Level Playoffs. The way this list was built, the three-point shots always sold in low volumes. However, the team made up for it, with a high efficiency in both percentages and long-range points for every 100 possessions. The catch here was finding a consistent high school or tertiary recorder. Sometimes, Jayson Tatum was trustworthy; Sometimes, he wasn't. Never. He never threatened his usage rate of his career, but he got his team into the range of home court advantages when he reached the postseason. No, it does not have the LeBron James effect we discussed earlier, but it is the right type for this system.3. Utah JazzProyected WINS: 46.52Averlower 5.02Remember before we said that the Brooklyn networks took a page of their own book. Jazz followed his suit. This squadron, while never confused by eye-catching, is, like the GM put it. GM.our most recent publication, "all in defense philosophy always." It landed in the top five of defensive efficiency more than each team that did not name the Cavaliers or Bucks, and gathered behind the production of its best player, Rudy Gobert. All I said, would you listen to the skater? What makes this team so dangerous is that it somehow found a way to be a three-point top-five team as well. Thinking about meeting these guys in the playoffs? Good luck.2. Los Angeles Clippers Prohibited Winnings: 48.42 Average Seed: 3.86 Of the 30 NBA teams, only one managed to get away from the simulation with a 100 percent success rate when making the playoffs. These Los Angeles Clippers pulled out of that incredible feat... and then did absolutely nothing in the post-season. Usually this is the part where we make fun of what his success was like in the playoffs, but we would be cruel to guide you like that. In 50 simulations, the Clips made the playoffs a remarkable 50 times, had the third-highest overall of the league win projected, and averaged the second-highest seed westward. And then they did not advance beyond the finals of the Western Conference once, even though they did so several times. I hate to be the bearer of bad news, Clips fans, but it looks like we've been here before. At least this time you had Kevin Durant putting in 24.8 points, 8.5 rebounds and 4.6 assists per night.1. Dallas Mavericks Projected earnings: 48,42 Average seed: 3.58 Remember when the James Harden-Dwight Howard experiment exploded with fame, almost always, before our eyes in Houston? Not these Dallas Mavericks. Throughout our process, the Mavs constantly threatened the first seed of the West. They won the conference championship after the conference championship and almost escaped with a perfect playoff projection. In what a Harden, he put 26.7 points, 6.7 rebounds and 7.8 assists and fired 42.9 percent deep. Howard, of course, was not so impressive, but his numbers per-36 (15.8 PTS, 15.0 REB, REB,blk) were comparable to last year's presentation. If chemistry is relative to you, try to forget everything that happened in houston. This team discovered it, or at least learned to hide it really, very well. %%%%%%%%%%%%%%%%%%%% brooklyn nets: 0 %%%%%%%%% . Here is a complete look at which teams of the Eastern Conference ended our simulation with the best chance to win a conference championship: miami heat: 2 percent milwaukee bucks: 2 percent Indian pacers: 4 percentdetroit pistons: 6 percentatlanta hawks: 10 percent Celtics: 10 percentnew york knicks: 14 percent philadelphia 76ersThroughout our 50 simulations. I have a complete look at the teams of the Western Western Conference nuestra simulaciÃ³n con la mejor oportunidad de ganar un campeonato de conferencias: San Antonio Spurs: 2 %Golden State Warriors: 2 por cientoMemphis Grizzlies: 6 por cientoPhoenix Suns: 8 por ciento Oklahoma City Thunder: 10 por cientoPortland Blazers de trail: 12 por cientoHouston Cohetes: 16% Utah Jazz: 20 por ciento Dallas Mavericks: 24 por cientoNBA 2KThe Boogie-led Seisers salieron de nuestra simulaciÃ³n como los favoritos del tÃtulo oficial, con los Mavs, Cavs, Knicks y Jazz no muy atrÃ¡s. He aquÃ un vistazo a todos los equipos de la AsociaciÃ³n que se jactan por lo menos un dos por ciento de ganar un tÃtulo de NBA: Miami Calor: 2 por cientoDetroit Pistons: 2 por cientoAtlanta Hawks: 2 por cientoMemphis Grizzlies: 2 por cientoPhoenix Suns: 4 por ciento Oklahoma City Thunder: 4 por cientoHouston Rockets: 4 por cientoPortland Blazers de trail: 6 por cientoBoston Celtics: 6 por ciento Utah Jazz: 10 por cientoNueva York Knicks: 10 por cientoCleveland Cavaliers: 14% Dallas Mavericks: 14 por cientoPhiladelphia 76ers: 20 por cientoNBA 2KAs la matemÃ¡tica va, los mÃ¡s campeonatos NBA que tienes, mÃ¡s NBA Finals MVPs que obtienes. Los Sixers, sin embargo, lo estÃ¡n haciendo de manera Ãºnica al convertirse en el Ãºnico equipo para tener mÃ¡s de un jugador a pie con un tiro a un trofeo. AquÃ estÃ¡ un vistazo a quiÃ©n tiene la mejor oportunidad de todos los 360 jugadores para llevar a casa el hardware: IsaÃas Thomas, Phoenix Suns: 4 por cientoDamian Lillard, Houston Rockets: 4 por cientoRussell Westbrook, Oklahoma City Thunder: 4 por cientoJohn Wall, Boston Celtics: 6 por cientoKyrie Irving, Portland Trail Blazers: 6 por cientoRudy Gobert, Utah Jazz: 10 por cientoLeBron James, New York Knicks: 10 por ciento Chris Paul, Cleveland Cavaliers: 14 por ciento James Harden, Dallas Mavericks: 14% DeMarcus Cousins, Philadelphia 76ers: 18 por ciento (Nota: Anthony Davis, Mike Conley, Bogdan Bogdanovic, Blake Griffin y Andrew Wiggins terminaron la simulaciÃ³n con un 2 por ciento de probabilidad Win an end MVP.) MVP.) MVP.)
