I can't get the bottom coil in too well though well. are managed and then tried to practice sewing a piece of material but fails to get the tension to the right, it seems ok on one side but full of rings etc. on the other - is it attempts and errors or what? I would like to be able to hate it correctly but can not - you need advice and some encouragement! I didn't hate a sewing machine since the grammar school - it helps!! op post: | dizzyday07 lun 05-Mar-12 22:01:29 did you put the coil in the right way? with my brother the thread must relax from the bossboggle on the top left your 06-Mar-12 18:18:12 thank you, I will try, I have no idea if it will work however, not the advice - er me with sewing machine!..... post post: | littenetree your 06-MAR-12 19:45:02 the voltage of the point is practically dependent on 2 things - higher and lower! first, as already mentioned, check that the coil has inserted the right way and that the wire on the reel (you poured it yourself?) is reasonably well-tended. Sometimes when I'm not concentrating the mine, you're all loose and skittish! check that you don't have the toasted out of the end of a needle in the gubbins (it happened to me once!) the top-point tensioner is what you practically always have to adjust (usually a knob set around 0 with the clock rotation option or counterclockwise. ) the reel below is a little more complicated if this is the problem. the metal case case is reduced (usually) the plastic coil in the will will have a tiny screw on its side that it is possible to turn to tension the wire coming out from the coil. I quickly confess that it is beyond my ability to change! the other things are: are your dogs to eat engaged? Some machines allow you to unpack them, and, is the pressure of the right foot? the large hand rotated the screw (usually) on the top of the machine (usually!) which turns depending on whether you are sewing thin cottons or expensive corduroy, for example. This will be a good explanation! hth. littenetree your 06-Mar-12 19:45:56 oh, and are both a lot of thread of a similar weight? bossboggle thu 08-MAR-12 18:15:53 Littenetree - thank you very much!! Follow your instructions and I managed to make the machine work! I had such fun today!! post of op: | littenetree gio 08-Mar-12 18:45:50 I am very satisfied. It's nothing.more bleeding from a car than a car that won't do it right Bossboggle Sat 10-Mar-12 08:32:06 LittenTree - Question. ... Doesn't seem to like sewing material more often - denim together (I destroyed a needle to find out!! Hee hee!) There's something I need to know how to sew thicker things If you needed it. I raised my foot and helped a little but there is some method if you have to sew thick stuff together? OpA € Å|s: | Bossboggle Sat 10-Mar-12 08:33:46 She stitched two layers of denim together, but I didn't like it very much when I got a seam. I was transforming old jeans jeans into something else. Messages OpA € Å|s: | tattered sat 10-mar-12 08:39:36 I am a little more than a virgin sewing machine, but denim should not break a needle.strattato Sat 10-Mar-12 09:20:58 Have you tried sewing through an existing seam? Litentree Sat 10-Mar-12 17:42:58 to tell the truth, most modern machines fight with fabric often! You need a very sharp needle, proper pressure on the foot (that screw turned out by hand usually On the upper part of the car) but the reality is, as others have said, which will be difficult to get the needle through existing seams, sewn commercially. If I'm taking jeans, what I do is sew up to stitching using a thread à à à «Jeansà» of adequate thickness; (The leg begins to climb over the ridge, I stop, I raise my foot, shoot out the fabric and cut a lot of thread (6â"?) Then start sewing immediately after the seam (in the first part the foot Feed the then I use those lengths 6â" € "to sew the hem through the original edges (use a thimble!) In the most orderly and convincing way "possible. Bossboggle Sun 11-Mar-12 12:06:11 Thanks again once again !! mn is so good when you can get information from people who know what they are doing !! posts opA € Å|s: | ltzes mon 25-jun-12 18:34:14 hello I have just purchased a brother X-5 and I can't take the empty coil from below to fill it any help would be appreciated brands and spare parts and accessories fabric accessories accessories accessories
