Best transfer app for android to iphone

Best file transfer app for android to ios. Best data transfer app for android to iphone. Best photo transfer app for iphone to android. Best contact transfer app for android to iphone. Best file transfer app for android to iphone.

If you are going to shell out the money for a smartphone and a data plan, you may also take advantage of some useful personal finance applications to recover some of those money! Here is a look at the best Android and iPhone Personal Finance Apps iPhone app. And while you are, my tips on how to cut the data use the use on iPhone and Android, while you use these and other apps, you can afford to make the transition from expensive \$ \$ \$ "nullimited\$ \$ \$ plans For the cheapest data plans. Or the most economical Wi-Fi hotspot plans. Mint.com: Budget apps by far the most used Personal Finance smartphone app is the mobile app MINT.com. Also available for iPhone, this free app synchronizes with your Mint.com account. With real-time access to all information on the financial account in one place, it can be very useful for the on-site budgetary decision-making process, purchase of purchase and alerts to pay bills in time. Gas Buddy: App Gas Finder App simply sets Buddy Gas and the Geo-Localize app synchronized with a database that spoiled the gas prices of local gas stations. Select the one you like and use your phone as GPS navigation to be addressed to the station. This app, now also available for iPhone is particularly useful when you don't know where it's the next service station when traveling and trying to decide if you should go down on this exit or wait for the next. ShopSavvy: Barcode Scanner ShopSavvy was the first app for the comparison of barcode scanning prices for the Android and remains one of the most popular apps for this day. Basically you keep a bar code, scanning it, and therefore a list of local and online prices are used for comparison to find out if you get a good deal. ShopSavvy also allows you to set price alerts on the items you want to follow. It is also available for iPhone. Nostrigrierries: Smart Grocery List Ourgrierries (Android) and iPhone) is not a list of ordinary foodstuffs. You can synchronize lists with other users so that if we say, your husband or wife remember while you're at work that you are out of the Oberon Bell beer, can add it to the list and synchronize automatically with your list sharing (avoiding trips Multiples at the store). But one of the best saving functions of money is that you can save your list for different shops. I highlighted the realization of unique lists for each store you visit as one of the 4 keys to save money on food and groceries without sacrifice. This app can help you do this. Intelligent receipts Smart Android app receipts (iPhone here) allows you to take pictures, create monthly. PDF and monthly expense reports. Precious for anyone who tries significantly for work, self-employment or charity purposes. Honorable mention: Keyring app: Keyring allows you to scan all barcodes on such awards cards for frequent retailers, show them on the screen and the cashier can run it from your phone. Reduce the Keychain connection! App Fuellog: The Android Fuellog app has almost done my Top 5. Allows you to monitor what you pay for the gas, what kind of mileage you are getting. It is an app that can serve as a real eye opening that it is necessary to reduce switching costs (or improve fuel efficiency). TipCalculator App: have they trouble calculating those annoying tips? TipCalculator takes some stress. Discussion of the app for Android Personal Finance: which of these apps are you using for your Android, iPhone or BlackBerry? What are your favorite personal finance apps? What other apps would you add to this list? Related places: like most of us, your phone is Your main camera and thanks to the ease of use, probably captured at least some photos a day. Those add over time, and sucked to lose them all just because you're going to iPhone on Android. Thanks to Google's photos, you don't have to! How to transfer iPhone photos to Android using Google Photos Download Google Photos from the App Store. Start Google Photos from your home screen. Touch Start. Tap OK when asked to allow Google Google To access your photos. Touch the switch next to using the cellular data to back up if you want to back up photos on mobile. If you don't want to accumulate a grave data bill, leave it off. Tocca continues. Touch the circle next to high quality or original. Touching high quality compresses your photo on 16 megapixels reduces file size, but get "unlimited storage" (2pb). The original will keep the size of the original file and with your Google Drive storage (15 GB). Tocca continues. Touch Receive a notification if you want notifications when someone shares photos with you. Otherwise it does not touch thanks. Tap Leave to leave notifications if you selected No thanks. This is everything! Google Photos automatically synchronizes your photo library and you will be able to access you on your Android phone or practically any device with an internet connection. Don't expect to see your photos on a different device right away. Synchronization may take a lot, especially if you have many photos. Requests? Questions about photo transfer with Google Photos? Let us know in the comments below! We could earn a commission for purchases using our links. Find out more. There is no direct way to transfer WhatsApp from Android to iPhone, as whatsapp does not officially support users who move between different types of phones. However, there are alternative solutions that make the transition from whatsapp on android to the least painful iPhone. Here's how to back up whatsapp messages from Android, then transfer your content to iPhone. WhatsApp offers the possibility of backing up Android users via Google Drive and for iOS users use iCloud. Unfortunately, you can't use these services to restore backup to a phone than a different type. It may make no sense for many, but it's down how whatsapp works currently. There are apps and tools you out that the status will transfer your backups to devices in a \$
