Reset Android phones, what functions? Factory rebuild or factory reset options are rarely used. Also, don't be surprised if there are people who don't understand how. In fact, it has many advantages, you know. Especially to deal with the errors that usually occur on mobile phones. We discuss everything here. First, make a backup copy of the HP data before starting the main chat. First of all, you should know how to back up a copy of HP data. As I said earlier, this factory reset will wipe all data. That's why it's important to separate the data before we start: when the memory card is not needed. Then, when the process starts, delete it first to avoid deleting the data. Also Read: Android Phone Button Broken? How to fix, how to reset your android phone to make reality come true. Reset Android with a small margin on average, one brand of HP and another. Talking is just a matter of space. Although the path itself is almost the same. Well, here I want to explain how to factory reset the phone. Lenovo, Huawei and others. How to restore Android settings (Settings page) Android needs to factory reset the mobile phone. There must be 100% capital. After setting up your mobile phone: open the icon settings at the top of the mobile phone menu. Reboot then your phone has been reset successfully. It's easy, isn't it? You can find detailed procedures and photos here: Step 1: In HP top menu (panel status bar) Swipe up to open settings icon. Step 2: Then a new page will appear. Swipe up, then open the Gadangan menu and adjust. Step 3: Here are a few settings. Choose factory settings. Step 4: When a reset reset window appears, just enter yes, accept, set or similar.HP Android reset, what does it do? Rarely is it factory reset or the ability to do a factory reset. Unsurprisingly, there are people who don't really understand how. You actually have so many advantages that you know about. Especially to prevent errors that often occur on mobile phones. Here we will discuss detailed. Before continuing the main discussion, create a copy of HP data, first you need to know how to provide HP data. As I said, this factory reset will be deleted. Therefore, it is important to provide our data before starting. The method is: Connect your mobile phone to your computer or laptop using a USB cable. Then copy important data from internal memory. For example, photos, videos and documents. Notes: if you don't need a memory card. If the restore process begins, all you have to do is remove it so that your data is not deleted. Also Read: Broken HP Android Button? So actually fix reset to factory settings of android phones, yes. Android reset from one HP brand to another isn't significantly different, as much as the location issue. Although the method itself is almost the same, I would like to explain how to place the mobile phone back to the factory settings with a full + image. This applies to all types of mobile phones, ranging from Oppo, Vivo, Xiaomi, Samsung, Asus, Lenovo, Huawei and more. Therefore, set Android in Android settings using Android settings to reset mobile phone settings. 100% should be a point. You can reset your phone to settings - open settings in the top menu of your mobile phone. Then open and reset the menu. Then tap the Plass button in the factory settings. Confirm the reset and wait for the process. After restarting HP, the mobile phone recovered successfully. It's very simple, isn't it? With actions and detailed images you can see it here: Step 1: Scroll down in the top menu (status status field), then open the configuration symbol. Step 2: Then a new page appears. Please scroll down and then open the "Backup and Reset" menu. Step 3: Several settings are available here. Select factory reset 4: If the confirmation window appears to be reset, just give yes, accept, reset or something like that. Step 5: If so, wait for HP to restart.5 to 15 minutes. So make sure that the battery is too full, that's too full without end. Also read: Overcoming Android telephones that cannot be handled. Reset your cell phone with call code, if you want to be faster, you can use it with a call code. This code is a kind of link with which you can reset your mobile phone as before without setting settings. So you can easily say it. But be careful, make sure that the data is secured, yes. Steps: Open the search app (phone). Then enter *2767 *3855#. Then HP automatically starts the reset. Although it is more practical, this reference code cannot be used in all HP types. Examples of mobile phones that can contain Samsung and Asus. Not all kinds. Also read: dealing with unopened camera apps3. Thanks to the Android recovery mode, all mobile phones have this recovery mode. We can also use this mode to reset your mobile phone. This method is suitable for the repair of damaged cell phones such as bootloops that should not be logged in due to its advantages. Next: First close your mobile phone. Until it changes to the recovery mode (key combination is not deleted). Then call the extinguishing window. Then select Delete data or reset the factories. So wait until the process is complete. Then you can try to restart the mobile phone. If the starting process takes a long time, please wait. Note: Recovery is a menu in which you can make different Android settings that are not available if the mobile phone is switched on. For example for a wipe cache to replace an old Rome with a new (custom Rome). Oh yes, this memory button is different with every cell phone. You can try it with the following instructions: HPKKKKOMPOMING KUTTENHP Press the ASUS tuning button + Open the clay button. You can find more details in the article combination for the Android Mobile Recovery button (search on this website). Advantages of Android Mobile when resetting to the factory settings You know that reset your mobile phone offers many advantages. Some of them are: # 1. Have you ever stopped a message, stopped a message when you used a mobile phone? The cause of this problem is diverse. But you know that this problem can be solved with a reset. # 2. If a mobile phone dies, the decision is to die suddenly, how?You don't have to worry because this problem can be solved using factory settings. How to overcome the spontaneous arrest of Android #3. Remove the virus do you have a virus on your mobile phone? It turns out that in rare cases this can happen, in particular Adware (Virus Adware). The restoration of the factory settings can be 100% effective # 4. Internal employment superverts if the internal memory is complete, the restoration will delete the invisible data, even if you do not see any files there. It is therefore guaranteed that memory will be easier again. Restore low power hp? Don't you know how to solve it to accelerate again? Let it really be. In my experience, the performance of the mobile phone will still be optimal. Finally, this is an easy way to restore the Android factory settings. All the above tutorials are guaranteed to work and can be used for all Android cell phones from old to brand new ones. In any case, the recovery method described above is also the most used. There are no complex terms. In fact, it is not difficult to follow the instructions, I hope it is useful. How to restore Android to appear as a new trend of the normal exchange of cell phones has become one thing for us, even if not all devices change regularly. Some people have to replace the device only if they start to fail or slow down. Others make changes when they tire or want to replace them for a newer model to keep up with the trend, especially when there are more and more new Android devices that use the Android operating system and their circulation is increasing quickly. Whatever the reason, most of us will replace or replace their structures with new ones. Read also: why does Android start slowing down? Usually we sell our previous equipment before or after the new device, but there is nothing unusual for those who prefer to give it to someone else (for example to another brother). Now, before the device changes the owner, we strongly recommend that you delete all the data on the device, including accounts, personal data, such as contact information or anything else stored on the device to avoid abuses by future users. The easiest and fastest way to delete all data on the device is to use the factory restoration function. The function of this function isComplete removal (data detection) in which all the data stored there, including contacts, photos, programs and even accounts, such as when we just buy it, will be cleaned up to the initial settings. For those of you who plan to remove such data from the Android OS device, all you need to do is do some simple steps: it's important! To type! Before you start resetting the factory settings, you need to know some things: Make sure you know if you remember the Gmail password stored on your mobile device. Since the password will again be needed when recovery of parameters for mobile phone management (Android 6.0 and a later version). If you want to restore the factory settings for your mobile phone, you must disconnect the entire Gmail account before restoring the factory settings. If you do not want to remove data stored in external memory (microSD), you must first select microSD on your device. You can also remove the mark that is usually shown to remove external memory (delete external memory data). Please check before confirmation. 1. Enter settings, find the spare menu as shown below, and reset. 2. When entering the menu, the screen will appear as shown below. Select the Factory Data Recovery menu (reset the original/factory settings). You are then informed that all data, including accounts, settings and installed programs, will be completely removed. If you are sure to continue your phone's restoration. Then there are usually several confirmation pages. For the first time, you will be offered to enter the screen lock, whether it is a plug or template lock, depending on the above. You will then be prompted to enter a confirmation code that will be displayed to see if you really want to delete the data to avoid accidental deletion. After approval, the device will be restarted to clear the data. This process usually takes some time, so you have to wait a little. When you are finished, the device will return the original settings, for example, when you first purchased it. AdvantagesIn addition to factory reset data wipe, factory reset is sometimes chosen to improve (reset) if certain errors may cause an error. Now it is a simple step to delete all data on Android devices. Check out the Techjau.com blog for more interesting information. Hope this is helpful! ㊦ ㊦
